Subsequent to the FPC's 1951 order disclaiming jurisdiction over the Hart Mountain-to-Billings facilities, the FPC found similar facilities to be within its jurisdiction and asserted jurisdiction over such facilities, under sections 1(b) and 7(c) of the Natural Gas Act by Opinion No. 563 and order in *International Paper Co.*, 42 FPC 428 (1969), aff'd *International Paper Co., v. FPC*, 438 F.2d 1349 (2nd Cir. 1971), cert denied, 404 U.S. 827 (1971). In its opinion No. 563 asserting jurisdiction over *International Paper*, the FPC expressly overruled the case which served as precedent for *Montana Power* and implicitly overruled the line of cases to which *Montana Power* belonged where the FPC had disclaimed jurisdiction in circumstances similar to those in the *International Paper* case. *Id.*, 42 FPC AT 257. In affirming the FPC, the United States Court of Appeals for the Second Circuit agreed that the transportation of natural gas across the state lines for the transporter's own use was within the FPC's jurisdiction and subject to its supervision and control under Section 1(b) and 7(c) of the Natural Gas Act. Additionally, the court found that the overruling of the line of cases to which *Montana Power* belonged was appropriate. *Id.*, 438 F.2d at 1356. The court reasoned that the policy of *stare decisis* presented no bar to either the FPC's change, in *International Paper*. from its prior position, or to the FPC's overruling its orders in the line of prior cases, particularly were none of the cases had been contested or the orders subjected to judicial review. And the court noted that the limits of the FPC's jurisdiction under the Natural Gas Act had been remolded by the courts since the passage of the Natural Gas Act, making appropriate the overruling of prior cases disclaiming jurisdiction to conform to the modified statutory standards.

Inasmuch as the order disclaiming jurisdiction over Montana Power's Hart Mountain-to-Billings facilities has been overruled, we find it unnecessary to issue an order requiring Montana Power to show cause why such facilities are not subject to the Commission's jurisdiction. Accordingly, the Staff's motion will be denied and instead we will order Montana Power to apply for and obtain a certificate of public convenience and necessity under sections 7 (c) and (e) of the Natural Gas Act authorizing the transportation of natural gas from Hart Mountain, Wyoming, to Billings, Mont., as previously described, and the operation of the facilities used therefor.

The Commission finds: (1) Montana Power transports natural gas in interstate commerce between the states of Wyoming and Montana.

(2) The transportation of natural gas across state lines and the operation of facilities therefor by Montana Power are subject to the jurisdiction of the Commission under Section 1(b) and 7(c) of the Natural Gas Act.

(3) The motion of the Commission Staff for an order to show cause should be denied for the reasons as hereinbefore stated, and an order should be issued directing Montana Power to apply for and obtain a certificate of public convenience and necessity under sections 7 (c) and (e) of the Natural Gas Act to operate the facilities and engage in the operations as hereinbefore described.

The Commission orders: (A) The staff motion for an order to show cause is denied.

(B) Montana Power is ordered to apply for and obtain a certificate of public convenience and necessity under Section 7 (c) and (e) of the Natural Gas Act authorizing the transportation of natural gas from Wyoming to Montana, as hereinbefore described, and the operation of the facilities used therefor.

By the Commission.

KENNETH F. PLUMB,
Secretary.

[Docket No. RP74-14]

MOUNTAIN FUEL RESOURCES, INC.

Filing Recalculated Account 191

OCTOBER 10, 1978.

Take notice that on October 3, 1978, Mountain Fuel Resources, Inc. (Mountain Fuel) filed with the Commission a recalculation of its Account No. 191 from the date of its acquisition of transmission facilities from Cascade Natural Gas Corporation in Docket No. CP76-111.

Mountain Fuel states that the problems with the account are the result of errors made in the calculation of the net accrual to Account 191 and the use of incorrect contra accounts.

Any person desiring to be heard to make any protest with reference to said filing should, on or before October 20, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C., 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make any protestants parties to the proceeding. Any person wishing to

V 43 / 202 OCT 18 78

become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. ER78-631]

MONTAUP ELECTRIC CO.

Filing

OCTOBER 12, 1978.

Take notice that on September 29, 1978 Montaup Electric Co. (Montaup) tendered for filing a service agreement with the Taunton Municipal Lighting Plant (Taunton) pursuant to Montaup's FERC Electric tariff, Original Volume No. II. Montaup states that the Service agreement provides for transmission service to Taunton for Taunton's entitlement in Vermont Yankee Nuclear Power Corp. and covers the periods November 1, 1978 through November 30, 1978 and April 1, 1979, through November 30, 1979. Montaup requests an effective date of November 1, 1978.

According to Montaup copies of the filing have been served on Taunton and the Massachusetts Department of Public Utilities.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 23, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

[Docket No. E-9181]

NANTAHALA POWER & LIGHT CO.

Revised Compliance Filing

OCTOBER 11, 1978.

Take notice that on September 29, 1978, Nantahala Power & Light Co., pursuant to § 1.12(c) of the Commission's Rules of Practice and Procedure, filed Nantahala's Response to Intervenor Motions to Reject Compliance Filing which includes revised documentation of the amounts which would have been collected pursuant to a fuel adjustment clause in Docket No. E-9181.

Nantahala indicates that this documentation is intended to supersede the documentation submitted to the Commission by Nantahala on August 18, 1978 in response to the Ordering Paragraph (B) of the Commission's Order Granting Rehearing, Modifying Prior Order, Determining Refunds, and Terminating Proceeding, issued July 20, 1978.

Any person desiring to be heard or to protest said filing should file a protest with the Federal Energy Regulatory Commission, 825 North Capital Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.10). All such protests should be filed on or before October 30, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. ER79-1]

NEW BEDFORD GAS & EDISON LIGHT CO.

Filing

OCTOBER 12, 1978.

Take notice that on October 2, 1978 New Bedford Gas & Edison Light Co. (New Bedford) filed a rate schedule governing the sale by New Bedford of a portion of its entitlement to capacity and related energy produced by Canal Electric Co.'s Unit No. 2 (Unit).

New Bedford states that by the provisions of the tendered rate schedule, New Bedford proposes to sell to the Hingham Municipal Lighting Plant 0.3425 percent of the Net Capability of the Unit (as defined at Article III of the tendered rate schedule) plus the energy related thereto for a 12-month period beginning November 1, 1978.

A copy of this filing has been served upon Hingham, according to New Bedford.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 23, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. ER78-622]

NORTHERN STATES POWER CO.

Letter Agreement

OCTOBER 6, 1978.

Take notice that Northern States Power Co. (Northern States), on September 22, 1978, tendered for filing a Letter Agreement, dated September 8, 1978, with the Department of Energy, United States of America.

Northern States indicates that the filed Letter Agreement extends certain provisions of Contracts No. 14-06-600-1556 and No. 14-06-600-1940 through December 31, 1978, or until a new interconnection contract is executed, whichever is earlier.

any person desiring to be heard or to protest such application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions and protests should be filed on or before October 16, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this application are on file with the Commission and are available for public inspection.

[6740-02-M]

[Docket No. CP77-473]

NORTHERN NATURAL GAS CO.

Petition To Amend

OCTOBER 12, 1978.

Take notice that on October 2, 1978, Northern Natural Gas Co. (Petitioner), 2223 Dodge Street, Omaha, Neb. 68102, filed in Docket No. CP77-473 a petition to amend the order of December 16, 1977, issued in the instant docket (57 FERC ——) pursuant to section 7(c) of the Natural Gas Act so as to authorize the transportation of the maximum of up to 600 Mcf of natural gas per day for Priority 2 uses by Libbey-Owens-Ford Company (LOF) at its Mason City, Iowa plant, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

It is indicated that pursuant to the Commission's order of December 16, 1977, Petitioner was authorized to transport up to 300 Mcf of natural gas per day owned by LOF, which gas would be used by LOF in the manufacturing of Thermopane insulating glass at its Mason City plant. It is further indicated that the subject order limited the average daily Priority 2 usage at the Mason City plant to 550 Mcf per day.

Petitioner states that based upon operating experiences involving two additional glass seal furnaces LOF transferred from its Toledo plant to Mason City, it believes that actual average daily Priority 2 usage at Mason City would be between 550 to 600 Mcf per day. Accordingly, Petitioner requests that the maximum limitation of 550 Mcf per day be increased to 600 Mcf per day.

Any person desiring to be heard or to make any protest with reference to said petition to amend should on or before November 3, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding.

Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

KENNETH F. PLUMB,
Secretary.

[6740-02-M]

[Docket No. CP79-5]

NORTHERN NATURAL GAS CO.

Application

OCTOBER 12, 1978.

Take notice that on October 4, 1978, Northern Natural Gas Co. (Applicant), 2223 Dodge St., Omaha, Nebr. 68102, filed in Docket No. CP79-5 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas for Applicant's Peoples Natural Gas Division (Peoples), all as more fully set forth in the application on file with the Commission and open to public inspection.

Applicant requests authorization to transport natural gas for Peoples pursuant to a transportation agreement dated September 1, 1978, among Applicant, Peoples and Northern States Power Company (NSP). It is stated that NSP has agreed to store certain volumes of propane for Peoples and to convert Peoples' propane to propane-air. Such propane-air volumes would be produced by NSP at its peak shaving plants in St. Paul, Minn., and at the request of Peoples, Applicant would displace and transport natural gas volumes equivalent to the propane-air volumes NSP produces for Peoples' account, it is stated.

Pursuant to the instant agreement, Applicant proposes at the direction of NSP to displace and transport during the period November 16 through March 15 (winter season) volumes of propane-air up to 15,000 Mcf per day to certain designated Peoples' delivery points. Applicant indicates that total daily volumes designated for transportation by NSP would be made available to Applicant by NSP's injection of propane-air into its St. Paul distribution system and the concurrent reduction of authorized deliveries by Applicant to NSP at St. Paul, Minn. under Applicant's CD-1 Rate Schedule. It is asserted that such winter season volumes of gas transported hereunder for Peoples would be used to serve firm and small volumes customers. Applicant indicates that it would transport such volumes to Peoples' delivery points on Applicant's system as follows:

Delivery point	Maximum daily volume (Mcf per day)		
	1978-79	1979-80	1980-81
Rochester, Minn.	1,700	3,600	4,400
Dubuque, Iowa	1,200	2,400	3,000
Story City, Iowa	400	800	1,000
Ackley, Iowa	400	800	1,000
Spencer, Iowa	700	1,300	1,700
Council Bluffs, Iowa	1,600	3,100	3,900
Total	6,000	12,000	15,000

It is indicated that Peoples would pay Applicant for the maximum daily volume Applicant is obligated to transport an annual demand charge of:

1978-79	$17,016.91
1979-80	33,687.50
1980-81	42,446.78

It is further indicated that Peoples would also pay to Applicant for each Mcf transported by Applicant a transportation charge as follows:

	Transportation charge (per Mcf)
Rochester, Minn.	$0.019
Dubuque, Iowa	.056
Story City, Iowa	.017
Ackley, Iowa	.017
Spencer, Iowa	.067
Council Bluffs, Iowa	.003

Applicant states that it would retain 1.0 percent of the volume received from NSP for transportation to Dubuque, Iowa and 1.5 percent of the volume received for Spencer, Iowa as fuel.

Any person desiring to be heard or to make any protest with reference to said application should on or before November 3, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is

required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-29399 Filed 10-17-78; 8:45 am]

[6740-02-M]

[Docket No. CP78-532]

OZARK GAS TRANSMISSION SYSTEM

Application

OCTOBER 5, 1978.

Take notice that on September 21, 1978, Ozark Gas Transmission System (Applicant), 2700 Fidelity Union Tower, Dallas, Tex. 75201, filed in Docket No. CP78-532 an application, pursuant to section 7(c) of the Natural Gas Act, for a certificate of public convenience and necessity authorizing the construction and operation of pipeline and related facilities and, incident thereto, for authorization to provide a natural gas transportation service for Columbia Gas Transmission Corp. (Columbia Gas) and Tennessee Gas Pipeline Co., a Division of Tenneco Inc. (Tennessee), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant states that Columbia Gulf Transmission Co. (Columbia Gulf), an affiliate of Columbia Gas, and Tennessee Ozark Gas Co., a subsidiary of Tenneco Inc., have joined with Ozark Gas Pipeline Corp. and Oklahoma Natural Development Corp. (ONDC) to cause Applicant to be formed as a general partnership to accomplish the construction and subsequent operation of a pipeline system for the purpose of transporting natural gas reserves which are presently developed and which will be developed in the future from the Arkoma Basin in Oklahoma and Arkansas. It is further stated that both Columbia Gas and Tennessee have entered into agreements with Applicant to provide for the receipt and transportation of their gas supplies from the Arkoma Basin. Each of the agreements, Applicant states, provides for the redelivery of such gas supplies at the existing transmission system of Natural Gas Pipeline Co. of America (Natural), in White County, Ark., for the accounts of Columbia Gas and Tennessee. Utilizing existing transmission facilities of other interstate pipeline systems, the gas would ultimately be delivered to Columbia Gas and Tennessee via direct transmission, displacement or exchange pursuant to agreements to be executed for such purposes, it is asserted. The gas to be transported, it is stated, would be purchased by Columbia Gas and Tennessee from Texas Oil and Gas Corp. and Tenneco Oil Co. which will produce the gas.

Applicant states that the pipeline system proposed would comprise 265 miles of 20-inch O.D. pipeline extending in a generally easterly direction from Pittsburg County, Okla., to the proposed point of interconnection with the existing transmission system of Natural in White County, Ark. Applicant states that in addition to the mainline pipeline system, there would be approximately 180 miles of 4-inch to 10-inch O.D. laterals, metering stations, dehydrators and compressors located as required along the pipeline system. Applicant indicates that the estimated cost of the proposed pipeline facilities, including laterals, metering stations, dehydrators and compressors is $104,000,000. Applicant states that the proposed facilities would be financed with $31.2 million in equity contributions, contributed in equal shares by the partners, and the remaining $72.8 million through long-term debt.

The application indicates that the proposed pipeline facilities would have a capacity of 170,000 Mcf of gas per day with initially available gas of 119,000 Mcf per day, which it would make available to Columbia Gas and Tennessee in equal amounts except that ONDC may elect, within 2 years after the pipeline is placed in commercial operation, to utilize up to 25 percent of the capacity of the pipeline not then utilized by or committed to Columbia Gas or Tennessee. Applicant requests authorization to transport such volumes for Columbia Gas and Tennessee.

Any person desiring to be heard or to make any protest with reference to said application should on or before October 27, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission, or its designee, on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provide for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[6740-02-M]

[Docket No. ER78-627]

PUBLIC SERVICE CO. OF COLORADO

Proposed Tariff Change

OCTOBER 6, 1978.

Take notice that Public Service Co. of Colorado (PSCo) on September 28, 1978, tendered for filing proposed changes in its FPC Electric Service Tariff. PSCo states that the proposed change in Supplement No. 1 (Supplement) to PSCo's Contract for Facilities, Interconnections and Transmission Service (Initial Agreement) with the United States Department of Energy Western Area Power Administration (WAPA) on file with the Commission under PSCo's FPC Rate Schedule No. 18.

PSCo further states that the Supplement provides for a revision in PSCo's termination at WAPA's Poncha Substation. The termination will be used for a 230-Kv line extending south rather than north as originally planned. PSCo indicates that the Supplement provides for PSCo to pay its share (one-third) of the actual cost of the completed design under the terms of the Initial Agreement and to pay the total cost to modify the Poncha Substation design to conform to current planning.

Copies of the filing were served upon all parties to the Agreement and affected state commissions, according to PSCo.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the

Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such protests or petitions should be filed on or before October 16, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-29365 Filed 10-17-78; 8:45 am]

[6740-02-M]

[Docket No. ER78-628]

PUBLIC SERVICE COMPANY OF COLORADO

Proposed Tariff Change

OCTOBER 11, 1978.

Take notice that Public Service Co. of Colo. (PSCo) on September 28, 1978, tendered for filing proposed changes in its FPC Electric Service Tariff. PSCo states that the proposed change is a new Power Purchase Agreement (Agreement) with Intermountain Rural Electric Assn. (Intermountain). PSCo further states that the Agreement is basically a restatement of a prior agreement with Intermountain which is currently on file with the Commission under PSCo's FPC Rate Schedule No. 14.

PSCo indicates that the principal change is a revision in the determination of monthly billing demands for months in which Western Area Power Administration (WAPA) energy limitations are imposed on Intermountain and will result in a more accurate billing. PSCo further indicates that there is a change in service which basically provides for four additional delivery points in Intermountain. PSCo states that these new delivery points are (1) Tiny Town which is located at Intermountain's Tiny Town Substation site, (2) Buckely Road which is a temporary delivery point located at the point of connection of Intermountain's line to Company's Primary Distribution line at the intersection of Smoky Hill Road and Buckley Road, (3) Waterton which is a proposed delivery point located at Company's Waterton Substation, which when completed will replace Sedalia Delivery Point, and (40 Palmer Lake which is a proposed delivery point located at Intermountain's Palmer Lake Substation site. PSCo further states that said delivery points are necessary because of Intermountain's increased load requirements. PSCo indicates that the Bowles Avenue delivery point is eliminated. PSCo further indicates that the loss adjustment factor at the Strasburg delivery point was changed from 2.0 percent to 1.3 percent, which was determined to be a more accurate representation of actual losses.

Copies of the filing were served upon all parties to the Agreement and affected state commissions, according to PSCo.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such protests or petitions should be filed on or before October 20, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENETH F. PLUMB,
Secretary.

[6740-02-M]

[Project No. 1025]

SAFE HARBOR WATER POWER CORP.

Application for New Major License

OCTOBER 6, 1978.

Take notice that on April 21, 1977, an application was filed under the Federal Power Act, 16 U.S.C. 791a-825r, by the Safe Harbor Water Power Corp. (Correspondence to: James L. Rintoul, Jr., Secretary and Treasurer, Safe Harbor Water Power Corp., RD.2, Conestoga, Lancaster County. Pa. 17516; James A. Biddison, Jr., Esquire, General Counsel, Baltimore Gas and Electric Co., 17th Floor, Gas and Electric Building, Baltimore, Md. 21203; and Edward M. Nagel, Esquire, Vice President, General Counsel and Secretary, Pennsylvania Power and Light Co., Two North Ninth Street, Allentown, Pa. 18101) for a new major license for the existing Safe Harbor Project No. 1025. The project is located on the Susquehanna River in York and Lancaster Counties, Pa.

The existing Safe Harbor Project consists of: (1) a concrete gravity type dam, 75 feet high and 4,869 feet long (including the powerhouse); (2) a reservoir (Lake Clarke), with a surface area of 7,360 acres at a normal water surface elevation of 272.2 feet above m.s.l. and usable storage capacity of 47,850 acre-feet; (3) a powerhouse, 638 feet long, 188 feet wide and 148.5 feet high, containing 7 main generating units and 2 service units with a total installed capacity of 230 MW; and (4) appurtenant facilities.

The Applicant intends to install five additional 37.5 MW units, utilizing existing bays in the powerhouse. The addition of the 5 units would increase the installed capacity by 187.5 MW, for a total capacity of 417.5 MW.

Applicant states that the expanded Safe Harbor Project will operate in essentially the same manner as the existing plant. The applicant proposes a second boat launching ramp, a floating dock, and facilities for recreational vehicles and campers.

The power and energy produced by the project will be sold to and utilized by the Baltimore Gas & Electric Co. and the Pennsylvania Power & Light Co., the two companies owning the Applicant.

Anyone desiring to be heard or to make any protest about this application should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, in accordance with the requirements of the Commission's Rules of Practice and Procedure, 18 CFR § 1.8 or § 1.10 (1977). In determining the appropriate action to take, the Commission will consider all protests filed, but a person who merely files a protest does not become a party to the proceeding. To become a party, or to participate in any hearing a person must file a petition to intervene in accordance with the Commission's Rules. Any protest or petition to intervene must be filed on or before December 6, 1978. The Commission's address is: 825 N. Capitol Street NE., Washington, D.C. 20426.

The application is on file with the Commission and is available for public inspection.

[Docket No. RP78-93]

SOUTHERN NATURAL GAS CO.

Proposed Changes in FERC Gas Tariff

OCTOBER 11, 1978.

Take notice that Southern Natural Gas Co. (Southern) on September 21, 1978, tendered for filing proposed changes in its FERC Gas Tariff, Original Volume No. 3. The proposed changes would increase revenues from a field sale to United Gas Pipe Line Co. under Southern's Rate Schedule F-10.

Southern states that this filing reflects rate increases in accordance with Article IV of the subject rate schedule up to the level allowed by § 2.56(a)(5) of the Commission's Statements of General Policy and Interpretations for gas sales from a well recompleted into a previously nonproductive reservoir. The increased rates reflected in the filing will increase annual revenues by $75,705. The proposed effective date is September 20, 1978.

Southern has requested waiver of the notice requirements to allow this tariff filing to become effective on September 20, 1978.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). Any such petitions or protests should be filed on or before October 27, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. RI78-92]

SUN OIL CO.

Petition for Special Relief

OCTOBER 12, 1978.

Take notice that on September 7, 1978, Sun Oil Company (Petitioner), Two North Park East, Box 20, Dallas, Tex. 75221, filed a petition for special relief in Docket No. RI78-92 pursuant to § 2.76 of the Commission's General Policy and Interpretations (18 CFR 2.76).

Petitioner requests authorization to charge 50.60 cents per Mcf at 14.65 psia, subject to Btu adjustment for the C. J. Lake, Well No. 1. In order to insure continued production from the C. J. Lake, Well No. 1, Petitioner was required to pull the tubing and set a packer just above the Morrow Zone to isolate the casing leak in the Hoover Zone. Petitioner currently is entitled to collect a base rate of 24.5 cents per Mcf at 14.65 psia, subject to contract tax reimbursement provisions and Btu adjustment provisions for gas delivered to Michigan Wisconsin from the C. J. Lake, Well No. 1 under Gas Rate Schedule No. 86. Petitioner is also currently collecting a base rate of 29.3398 cents [1] per Mcf at 14.65 psia, subject to tax reimbursement and Btu adjustment for gas delivered to Colorado Interstate from the C. J. Lake, Well No. 1, pursuant to Gas Rate Schedule No. 338.

Any person desiring to be heard or to make any protest with reference to said petition should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All such petitions or protests should be filed on or before November 3, 1978. All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's Rules.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-29401 Filed 10-17-78; 8:45 am]

[1] This rate was set in Opinion No. 749 as the national rate.

[6740-02-M]

[Docket No. RI78-91]

SUN OIL CO.

Petition for Special Relief

OCTOBER 12, 1978.

Take notice that on September 5, 1978, Sun Oil Co. (Petitioner), Two North Park East, Box 20, Dallas, Tex. 75221, filed a petition for special relief in docket No. RI78-91 pursuant to § 2.76 of the Commission's General Policy and Interpretations (18 CFR 2.76).

Petitioner requests authorization to charge $1.819 Mcf at 14.65 psia, subject to Btu adjustment for the sale of gas from its G. H. Brandt Well No. 5. To remedy the effect of declining pressure in said well and thus insure continued production, Petitioner proposes to install compression equipment. Petitioner is currently entitled to collect a base rate of 29.3398 cents per Mcf at 14.65 psia plus 2.3789 cents tax reimbursement and subject to Btu adjustment.

Any person desiring to be heard or to make any protest with reference to said petition should file a petition to intervene or a protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All such petitions or protests should be filed on or before November 3, 1978. All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's rules.

[6740-02-M]

[Docket No. CP78-542]

TEXAS EASTERN TRANSMISSION CORP.

Application

OCTOBER 11, 1978.

Take notice that on September 28, 1978, Texas Eastern Transmission Corp. (Texas Eastern), Post Office Box 2521, Houston, Tex. 77001, filed an application, pursuant to section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing Texas Eastern to construct necessary interconnection facilities and to transport natural gas for both Elizabethtown Gas Co. (Elizabethtown) and New Jersey Natural Gas Co. (New Jersey), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

It is stated that Elizabethtown and New Jersey are resale customers of Texas Eastern. It is further stated both companies own an equal interest in the No. 1 Carl Loewer Well located in Evangeline Parish, La., totaling 700 dekatherms equivalent of natural gas per day per company. Natural gas quantities, not to exceed 700 dekatherms per day for each participant, would be delivered to Texas Eastern at a point to be constructed on its 30-inch No. 14 line located in St. Landry Parish, La. between Texas Eastern and Natural Gas Gathering Co., an affiliate of Elizabethtown, it is said. Texas Eastern would then redeliver the stated quantities to the existing points of interconnections with Elizabethtown and New Jersey located in Middlesex County, N.J. It is stated that construction of the facilities as described above is estimated to cost approximately $53,350, and Elizabethtown and New Jersey would reimburse Texas Eastern for all construction costs, it is said.

It is stated that Texas Eastern will charge the two customers its Rate Schedule TS-1 (Fourth Revised Volume No. 1) amount as filed with the Commission and as the same may be hereafter revised or changed.

It is stated that the proposed transportation service is required in order to assist in offsetting curtailments which may be experienced by both customers.

Any person desiring to be heard or to make any protest with reference to said application should on or before November 2, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken, but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding, or to participate as a party in any hearing therein, must file a petition to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission, or its designee, on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that the grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-29384 Filed 10-17-78; 8:45 am]

[6740-02-M]

[Docket No. CP77-85]

TRANSCONTINENTAL GAS PIPE LINE CORP.

Further Amendment

OCTOBER 11, 1978.

Take notice that on September 20, 1978, Transcontinental Gas Pipe Line Corp. (Transco), P.O. Box 1396, Houston, Tex. 77001, filed in Docket No. CP77-85[1] an amendment pursuant to section 7(c) of the Natural Gas Act to the pending application therein for a certificate of public convenience and necessity authorizing the transportation of natural gas for Union Gas Co. (Union), all as more fully set forth in the amendment to the application which is on file with the Commission and open to public inspection.

In its original application Transco seeks authorization to transport on an interruptible basis for Union volumes of gas which Union's president, John H. Ware 3d (Ware), has developed through participation in an exploration and drilling venture and which he would sell to Union. The transportation would take place from a point of delivery to Transco on its main line in Evangeline Parish, La., to existing points of delivery to Union in Pennsylvania, and is limited so as to preclude Union from receiving from Transco on any day a total quantity of purchase and transportation gas in excess of its authorized CD-3 entitlement, it is said. It is asserted that the additional facilities would be required to render the proposed service.

It is indicated that the transportation agreement dated October 1, 1976, herein specifies a maximum daily quantity of 185 Mcf which would be available for transportatoin from production of Ware in the East Blue Point field in Evageline Parish. It is asserted that additional development in the field has made available to Ware up to 750 Mcf per day and the parties have executed an agreement which would increase the maximum daily quantity for transportation to 750 Mcf.

Transco proposes to charge Union 24 cents per dekatherm equivalent of gas transported, and would retain 4.4 percent of the volumes for compressor fuel and line loss makeup.

Any person desiring to be heard or to make any protest with reference to said amendment should on or befor November 2, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing

[1] This proceeding was commenced before the FPC. By joint regulation of Oct. 1, 1977 (10 CFR 1000.1), it was transferred to the FERC.

therein must file a petition to intervene in accordance with the Commission's rules. Persons having heretofore filed need not do so again.

KENNETH F. PLUMB,
Secretary.

[6740-02-M]

[Docket No. RP75-30]

UNITED GAS PIPE LINE CO.

Proposed Changes in FPC Gas Tariff

OCTOBER 11, 1978.

Take notice that United Gas Pipe Line Co. (United) on September 29, 1978, tendered for filing proposed changes in its FPC Gas Tariff, Original Volume No. 1.

United states that the purpose of this filing is to reflect a decrease in the rate for gas purchased from Pennzoil Producing Co. and Pennzoil Co. (Pennzoil) pursuant to the Stipulation and Settlement Agreement dated December 29, 1977, in Docket No. RP75-30. The proposed decrease is based on Applicant's prior understanding that its operations would be nonjurisdictional, and can be placed in operation immediately.

Any person desiring to be heard or to make any protest with reference to said filing should on or before October 27, 1978, file with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[6740-02-M]

[Docket No. CP79-7]

TRI-STATE GAS CO.

Application

OCTOBER 12, 1978.

Take notice that on October 4, 1978, Tri-State Gas Co. (Applicant), Rural Route, Hazelton, Ind. 47640, filed in Docket No. CP79-7 an application pursuant to section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline and compression facilities and the transportation and sale of between 2,500 Mcf and 5,000 Mcf of natural gas per day to Citizens Resource Development Corp. (Citizens Resource), all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Applicant states that in the event the Commission decides in Docket No. CP78-325 that it is not a gatherer of natural gas and is thus subject to the jurisdcition of the Commission, it proposes to construct and operate approximately 11 miles of 4-inch pipeline and 3 miles of 2-inch pipeline and related gas processing facilities to be used to transport between 2,500 Mcf and 5,000 Mcf of natural gas per day which it would sell to Citizens Resource for sale to and use by Citizens Gas & Coke Utility. Applicant further states that it would purchase casinghead gas presently being flared from operators in southern Knox and northern Gibson Counties, Ind., would transport such gas to its processing facilities in southern Knox County for processing and compressing and would sell the gas to Citizens Resource.

Applicant asserts that it would make no specific charges for its services to the producers or Citizens Resource but contemplates purchasing, processing and selling the gas to Citizens Resource at a predetermined contract price.

It is further asserted that Applicant would deliver the gas to Texas Gas Transmission Corp. (Texas Gas) which would deliver the gas to Citizens Resource at Citizens Resource's storage facilities in Greene County, Ind.

Applicant states that the total estimated cost of the pipeline system and processing facilities is $1,500,000. It is further stated that construction of the proposed facilities was undertaken, based on Applicant's prior understanding that its operations would be nonjurisdictional, and can be placed in operation immediately.

Any person desiring to be heard or to make any protest with reference to said application should on or before November 3, 1978, file with the Federal Energy Regulatory Commission, Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 1.8 or 1.10) and the regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a petition to intervene in accordance with the Commission's rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no petition to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a petition for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Applicant to appear or be represented at the hearing.

KENNETH F. PLUMB,
Secretary.

[6740-02-M]

[Docket No. ER78-624]

UNION ELECTRIC CO.

Proposed Revised Service Schedule

OCTOBER 6, 1978.

Take notice that on September 25, 1978, Union Electric Co. (Union) tendered for filing an Amendment and revised Schedule II to the Interchange Agreement dated February 2, 1968, between Union and Arkansas-Missouri Power Co.

Union indicates that said Agreements provide for revisions in certain rates under Interchange Agreement.

Union requests a proposed effective date of September 15, 1978, and therefore requests waiver of the Commission's notice requirements.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 16, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

[Docket No. RP71-29, (Phase III) et al.]

UNITED GAS PIPELINE CO.

Compilation of Restricted Service List

OCTOBER 6, 1978.

The present service list in *United Gas Pipeline Company,* Docket No. RP71-29, et al, contains in excess of 250 parties. Since many parties are only interested in the Phase II portion of Docket No. RP71-29, et al, it would be inefficient to rquire service of Phase III pleadings on all parties on the present service list. A restricted service list for the Phase III proceeding will, therefore, be developed.

All parties desiring to receive documents in the Phase III proceeding shall file with the Secretary their name and mailing address on or before October 23, 1978. The Secretary will then compile a restricted service list for utilization in the Phase III proceeding and serve it on the parties in Phase III.

KENNETH F. PLUMB,
Secretary.

[6740-02-M]

[Docket No. RP75-30]

UNITED GAS PIPE LINE CO.

Certification of Settlement Agreement

OCTOBER 6, 1978.

Take notice that on October 14, 1977, Administrative Law Judge Lande certified a proposed settlement agreement to the Commission in Docket No. RP75-30. This agreement proposes to resolve all issues in the captioned docket except for the reserved issues of depreciation rates, rate of return, interest reimbursement costs, and gas costs. Due to administrative error this Notice of Certification of Settlement Agreement was not issued in a more timely fashion.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). Comments will be entertained only on the merits of the settlement agreement and not on reserved issues. Initial comments will be filed with the Commission on or before November 1, 1978, and reply comments will be filed on or before November 22, 1978. Comments will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[FR Doc. 78-29386 Filed 10-17-78; 8:45 am]

[6740-02-M]

[Docket No. CI78-1118]

UNITED GAS PIPE LINE CO.

Petition for Declaratory Order

OCTOBER 12, 1978.

Take notice that on August 21, 1978, United Gas Pipe Line Co. (United) filed in Docket No. CI78-1118 a petition pursuant to section 554 of the Administrative Procedure Act (5 USC 554(c)) and 18 CFR 1.7(c) requesting that the Commission issue a declaratory order clarifying the respective rights of United and Texas Eastern Transmission Company (Texas Eastern) to certain gas produced by Cavalla Energy Exploration Company (Cavalla).

United states that the gas in question is subject to the Agreement Relating to Availability of Gas (Gas Availability Agreement) entered into among United, Pennzoil Producing and Pennzoil Co. on January 2, 1976, pursuant to the Stipulation and Settlement Agreement approved by the Commission in *Investigation of Pennzoil Company—United Gas Pipeline Company Spinoff and Related Transactions et al., Docket Nos. RP74-87, et al.*[1] This gas was produced from two wells located on acreage farmed out to Cavalla by Pennzoil Producing Co. (Pennzoil Producing) in the Tatton Ranch Area, Refugio County, Tex. United states that this acreage was erroneously described in a 1974 contract between Belco Petroleum Corp. (Belco) and Texas Eastern and that Belco has recently filed in Docket No. CI75-137 to amend the prior Commission certification to exclude the acreage in question. United further states that Cavalla is selling the disputed gas to Texas Eastern without complying with the terms of the Gas Availability Agreement requiring United's consent.

Any person desiring to be heard or to make any protest with reference to said petition should on or before November 3, 1978, file with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, a petition to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure applicable in this proceeding (49 CFR Part 1000). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding.

[Docket No. RP72-41 (PGA78-2)]

WESTERN TRANSMISSION CORP.

Proposed Chonges

OCTOBER 6, 1978.

Take notice that Western Transmission Corp. (Western), on September 29, 1978, tendered for filing as part of its FPC Gas Tariff, Original Volume No. 1, the following sheet: Ninth Revised Sheet No. 3-A, superseding Eighth Revised Sheet No. 3-A.

Western states the proposed changes would decrease the monthly charges for purchased gas to Colorado Interstate Gas Company, Western's sole jurisdictional customer, pursuant to the provisions of section 18 of Western's FPC Gas Tariff, Original Volume No. 1.

Because this is a rate decrease, Western requests that the notice provision otherwise applicable be waived so as to permit the proposed rates to become effective October 1, 1978.

Copies of this filing have been served upon Colorado Interstate Gas Co.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 16, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

WESTERN TRANSMISSION CORP.

Proposed Chonges

OCTOBER 10, 1978.

Take notice that Western Transmission Corp. (Western), on September 28, 1978, tendered for filing as part of its FPC Gas Tariff, Original Volume No. 1, the following sheet: Eighth Revised Sheet No. 3-A, superseding Second Substitute Seventh Revised Sheet No. 3-A.

Western states that the proposed changes would increase the monthly charges for purchased gas to Colorado Interstate Gas Co., Western's sole jurisdictional customer, pursuant to the provisions of section 18 of Western's FPC Gas Tariff, Original Volume No. 1.

Although this is a rate increase, Western requests that the notice provision otherwise applicable be waived so as to permit the proposed rates to become effective July 1, 1978, insofar as statements and payments will not be rendered and made before August 26, 1978.

Copies of this filing have been served upon Colorado Interstate Gas Co.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the

[1] Pennzoil Producing, Texas Eastern and United were all parties to Docket No. RP74-87 and supported the settlement agreement. Cavalla was not a party to the proceeding.

V 43/202 OCT 18 78

Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with Sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 20, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. RP78-55 and RP78-91]

WEST TEXAS GATHERING CO.

Revised Tariff Filing

OCTOBER 10, 1978.

Take notice that on September 11, 1978, West Texas Gathering Co. ("West Texas") filed with the Commission a supplement to its April 13, 1978 tariff filing in Docket No. RP78-55; a new docket number (RP78-91) has been assigned to this revised filing. West Texas states that it is filing a complete new set of materials to supplement the April filing.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 20, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretay.

[6740-02]

[Docket No. ER78-512]

WISCONSIN ELECTRIC POWER CO.

Compliance Filing

OCTOBER 10, 1978.

Take notice that Wisconsin Electric Power Co. (WEP) On September 29, 1978, submitted what WEP describes as a compliance filing with ordering paragraph (B) of the Commission's suspension order issued August 31, 1978, in the above captioned proceeding. WEP states that this compliance filing contains reduced rates to all affected wholesale customers, including the Cities of New London and Shawano.

Any person desiring to be heard or to protest said application should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with sections 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 19, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a petiton to intervene. Copies of this application are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

[Docket No. ER79-5]

WISCONSIN PUBLIC SERVICE CORP.

Filing

OCTOBER 12, 1978

Take notice that Wisconsin Public Service Corp. (WPSC) on October 2, 1978, tendered for filing letter agreements to the Partical Requirement Service Agreement with Consolidate Water Power Co. WPSC states that this agreement will revised the contract demand quantities for peak load, intermediate load, and base load in accordance with Exhibit 1 of the agreement, Paragraph 6, Requirements.

WPSC proposes an effective date of October 1, 1978, and therefore requests waiver of the Commission's notice requirements.

Copies of this filing were served upon Consolidated Water Power Co., according to WPSC.

Any person desiring to be heard or to protest said filing should file a petition to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street NE., Washington, D.C. 20426, in accordance with §§ 1.8 and 1.10 of the Commission's Rules of Practice and Procedure (18 CFR 1.8, 1.10). All such petitions or protests should be filed on or before October 23, 1978. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceedings. Any person wishing to become a party must file a petition to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

KENNETH F. PLUMB,
Secretary.

ENVIRONMENTAL PROTECTION AGENCY

[FRL 989-2; OPP-180172C]

MISSISSIPPI AUTHORITY FOR THE CONTROL OF FIRE ANTS

Proposed Emergency Exemptions for Use of Ferriamicide To Control Fire Ants in Eight States; Comment Period

AGENCY: Environmental Protection Agency, Office of Pesticide Programs (EPA, OPP).

ACTION: Proposed emergency exemption; additional comment period.

SUMMARY: EPA is providing the opportunity for additional public comment on applications for emergency exemptions to permit use of the pesticide Ferriamicide to control fire ants in Alabama, Arkansas, Florida, Georgia, Louisiana, North Carolina, South Carolina, and Texas.

DATE: Comments are due by November 15, 1978.

ADDRESS: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Mr. Timothy A. Gardner, Product Manager 15 (PM-15), Registration Division (TS-767), Office of Pesticide Programs, EPA, Room 229, East Tower, 202-426-9426.

SUPPLEMENTARY INFORMATION: In a previous issue of the FEDERAL REGISTER, EPA has published a notice of opportunity for additional public comment on the application of the Mississippi Authority for the Control of Fire Ants (Mississippi Authority) for an exemption under section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) 7 U.S.C. § 136, et seq. EPA is also providing for additional public notice and comment on the similar applications of the following eight States: Alabama, Arkansas, Florida, Georgia, Louisiana, North Carolina, South Carolina, and Texas.

A separate public file, available from the person designated above as the Agency contact, will contain the documents relating to the applications for these States. The Agency will accept additional comments that were not submitted during the initial comment period designated on August 25, 1978 (43 FR 38084). Since additional information will be required from the eight States to support their applications, the comment period will continue through November 15, 1978, to insure public comment on all documents submitted.

The Agency will accept comments submitted after November 15, to the extent possible consistent with orderly decisionmaking.

Dated: October 12, 1978.

STEVEN D. JELLINEK,
Assistant Administrator for Toxic Substances.

[FRL 989-6]

SCIENCE ADVISORY BOARD HEALTH EFFECTS RESEARCH REVIEW GROUP

Open Meeting

Under Pub. L. 92-463, notice is hereby given that a 2-day meeting of the Health Effects Research Review Group of the Science Advisory Board will be held on November 13 and 14, 1978. The location of this meeting will be Room 3906, 401 M Street SW., Washington, D.C. 20460. The meeting will start at 9 a.m. on November 13, 1978.

The Environmental Research Development and Demonstration Authorization Act of 1978, Pub. L. 95-155, requires a special report to be prepared by the Science Advisory Board. This will be a comprehensive report to the Administrator, the President, and the Congress, concerning (1) the health effects research authorized by this Act and other laws; (2) the procedures generally used in the conduct of such research; (3) the internal and external reporting of the results of such research; (4) the review procedures for such research and results; (5) the procedures by which such results are used in internal and external recommendations on policy, regulations and legislation; and (6) the findings and recommendations of the report to the House Committee on Science and Technology entitled "The Environmental Protection Agency's Research Program with primary emphasis on the Community Health and Environmental Surveillance System (CHESS): An Investigative Report."

The 2-day meeting will be used for discussions with specific Agency staff members, for review of the findings from site visits, and for discussions and draft report writing.

The 2-day meeting will be open to the public. Any member of the public wishing to attend should contact the Secretariat, Science Advisory Board (A-101), U.S. Environmental Protection Agency, Washington, D.C. 20460 by c.o.b. November 8, 1978. Please ask for Mrs. Shirley Smith. The telephone number is 202-755-0263.

Dated: October 10, 1978.

RICHARD M. DOWD,
Staff Director, Science Advisory Board.

FEDERAL COMMUNICATIONS COMMISSION

BROADCAST BUREAU ACTION

Correction to Transmittal Sheet No. 8 to Volume III

OCTOBER 5, 1978.

There are errors in Transmittal Sheet No. 8 to Volume III of the FCC rules and regulations, August 1976 Edition, issued by the Government Printing Office.

The text of § 73.35 on "Multiple Ownership" of AM broadcast stations was incorrectly deleted. The text should continue to read as set forth on page 2 of this Notice.

The following paragraph (d) was omitted from § 73.1510 on "Experimental authorizations:"

(d) The FCC may request a report of the research, experimentation and results at the conclusion of the experimental operation.

In the Alphabetical Index of Rules Titles—Part 73, listings of "Multiple ownership" and "Ownership, multiple" should read § 73.35 in Subpart A on AM broadcast stations, 73.240 in Subpart B on Commercial FM stations and § 73.636 in Subpart E on TV broadcast stations (instead of § 73.1100 in each Subpart).

FEDERAL COMMUNICATIONS COMMISSION,
WILLIAM J. TRICARICO,
Secretary.

§ 73.35 Multiple ownership.

(a) No license for a standard broadcast station shall be granted to any party (including all parties under common control) if such party directly or indirectly owns, operates, or controls: one or more standard broadcast stations and the grant of such license will result in any overlap of the predicted or measured 1 mV/m groundwave contours of the existing and proposed stations, computed in accordance with § 73.183 or § 73.186; or one or more television broadcast stations and the grant of such license will result in the predicted or measured 2 mV/m groundwave contour of the proposed station, computed in accordance with § 73.183 or § 73.186, encompassing the entire community of license of one of the television broadcast stations or will result in the Grade A contour(s) of the television broadcast station(s), computed in accordance with § 73.684, encompassing the entire community of license of the proposed station; or a daily newspaper and the grant of such license will result in the predicted or measured 2 mV/m contour, computed in accordance with § 73.183 or § 73.186, encompassing the entire community in which such newspaper is published.

V 43 / 202 OCT 18 78

(b) No license for a standard broadcast station shall be granted to any party (including all parties under common control) if such party, or any stockholder, officer or director of such party, directly or indirectly owns, operates, controls, or has any interest in, or is an officer or director of any other standard broadcast station if the grant of such license would result in a concentration of control of standard broadcasting in a manner inconsistent with the public interest, convenience, or necessity. The Commission, however, will in any event consider that there would be such a concentration of control contrary to the public interest, convenience or necessity for any party or any of its stockholders, officers, or directors to have a direct or indirect interest in, or be stockholders, officers, or directors of, more than seven standard broadcast stations, or of three broadcast stations in one or several services, where any two are within 100 miles of the third (measured city to city), if there is primary service contour overlap of any of the stations.

[§ *73.35(b) amended eff. 4-22-77; III(76)-2*]

(c) No renewal of license shall be granted for a term extending beyond January 1, 1980, to any party that as of January 1, 1975, directly or indirectly owns, operates or controls the only daily newspaper published in a community and also as of January 1, 1975, directly or indirectly owns, operates or controls the only commercial aural station or stations encompassing the entire community with a city-grade signal during daytime hours (predicted or measured signal for AM, predicted for FM). The provisions of this paragraph shall not require divestiture of any interest not in comformity with its provisions earlier than January 1, 1980. Divestiture is not required if there is a separately owned, operated or controlled television broadcast station licensed to serve the community.

NOTE 1.—The word "control" as used herein is not limited to majority stock ownership, but includes actual working control in whatever manner exercised.

NOTE 2.—In applying the provisions of paragraphs (a) and (c) of this section, partial (as well as total) ownership interests in corporate broadcast licensees and corporate daily newspapers represented by ownership of voting stock of such corporations will be considered.

NOTE 3.—Except as provided in Notes 4 and 5 of this section, in applying the provisions of paragraphs (a), (b) and (c) of this section to the stockholders of a corporation which has more than 50 voting stockholders, only those stockholders need be considered who are officers or directors or who directly or indirectly own 1 percent or more of the outstanding voting stock.

NOTE 4.—In applying the provisions of paragraphs (a), (b) and (c) of this section to the stockholders of a corporation which has more than 50 voting stockholders, an investment company as defined in 15 U.S.C. section 80a-3 need be considered only if it directly or indirectly owns 5 percent or more of the outstanding voting stock or if officers or directors of the corporation are representatives of the investment company. *Provided, however,* That the investment company exercises no control over the management or policies of the corporation. Holdings by investment companies under common management shall be aggregated.

NOTE 5.—In applying the provisions of paragraphs (a), (b), and (c) of this section to the stockholders of a corporation which has more than 50 voting stockholders, a bank holding stock through its trust department in trust accounts or an insurance company need be considered only if such bank or insurance company directly or indirectly owns 5 percent or more of the outstanding voting stock or if officers or directors of the corporation are representatives of the bank or insurance company. *Provided, however,* That the bank or insurance company exercise no control over the management or policies of the corporation. Holdings by banks or insurance companies shall be aggregated if the banks or insurance companies have any right to determine how the stock will be voted.

NOTE 6.—In calculating the percentage of ownership of voting stock under the provisions of Notes 4 and 5, if an investment company, bank or insurance company, directly or indirectly owns voting stock in a company which in turn directly or indirectly owns 50 percent or more of the voting stock of a corporate broadcast licensee or corporate daily newspaper, the investment company, bank or insurance company shall be considered to own the same percentage of outstanding shares of the corporate broadcast station licensee or corporate daily newspaper as it owns of outstanding voting shares of the company standing between it and the licensee corporation or corporate daily newspaper. If the intermediate company owns less than 50 percent of the voting stock of a corporate broadcast station licensee or corporate daily newspaper, the holding of the investment company, bank or insurance company need not be considered under the 5-percent rule, but officers or directors of the licensee corporation or of the corporate daily newspaper who are representatives of the intermediate company shall be deemed to be representatives of the investment company, bank or insurance company if the investment company, bank or insurance company owns 5 percent or more of the intermediate company.

[§ *73.35 Notes 5 & 6 amended eff. 8-29-77; III (76)-4*]

NOTE 7.—In cases where record and beneficial ownership of voting stock of a corporate broadcast station licensee or corporate daily newspaper which has more than 50 voting stockholders are not identical, e.g., bank nominees holding stock as record owners for the benefit of mutual funds, brokerage houses holding stock in street names for the benefit of customers, trusts holding stock as record owners for the benefit of designated parties, and insurance companies holding stock, the party having the right to determine how the stock will be voted will be considered to own it for the purposes of these rules.

NOTE 8.—Paragraph (a) of this section will not be applied so as to require divestiture, by any licensee, of existing facilities. Said paragraph will not apply to applications for increased power for Class IV stations; to applications for assignment of license or transfer of control filed in accordance with § 1.540(b) or § 1.541(b) of this chapter, or to applications for assignment of license or transfer of control to heirs or legatees by will or intestacy if no new or increased overlap would be created between commonly owned, operated or controlled standard broadcast stations and if no new encompassment of communities proscribed in paragraph (a) of this section as to commonly owned, operated, or controlled standard broadcast stations and television broadcast stations or daily newspapers would result. Said paragraph will apply to all applications for new stations, to all other applications for assignment or transfer, and to all applications for major changes in existing stations except major changes that will result in overlap of contours of standard broadcast stations with each other no greater than already existing. (The resulting areas of overlap of contours of standard broadcast stations with each other in such major change cases may consist partly or entirely of new terrain. However, if the population in the resulting overlap areas substantially exceeds that in the previously existing overlap areas, the Commission will not grant the application if it finds that to do so would be against the public interest, convenience, or necessity.) Paragraph (a) of this section will not apply to any application by a party who directly or indirectly owns, operates, or controls a UHF television broadcast station where grant of such application would result in the Grade A contour of the UHF station encompassing the entire community of license of a commonly owned, operated, or controlled standard broadcast station or would result in the entire community of license of such UHF station being encompassed by the 2 mV/m contour of such standard broadcast station. Such community encompassment cases will be handled on a case-by-case basis in order to determine whether common ownership, operation, or control of the stations in question would be in the public interest. Commonly owned, operated, or controlled broadcast stations, with overlapping contours or with community-encompassing contours prohibited by paragraph (a) of this section may not be assigned or transferred to a single person, group, or entity, except as provided above in this note. If a commonly owned, operated or controlled standard broadcast station and daily newspaper fall within the encompassing proscription of paragraph (a) of this section, the station may not be assigned to a single person, group or entity if the newspaper is being simultaneously sold to such single person, group or entity.

NOTE 9.—Paragraph (a) of this section will not be applied to cases involving television stations which are primarily "satellite" operations. Such cases will be considered on a case-by-case basis in order to determine whether common ownership, operation, or control of the stations in question would be in the public interest. Whether or not a particular television broadcast station which does not present a substantial amount of locally originated programming is primarily a "satellite" operation will be determined on the facts of the particular case. An authorized and operating "satellite" television station the Grade A contour of which completely encompasses the community of license of a commonly owned, operated, or controlled standard broadcast station, or the community of license of which is completely encompassed by the 2 mV/m contour of such standard broadcast station may subsequently become a "non-satellite" station with local studios and locally originated programming. However, such commonly owned, operated, or controlled standard and "non-satellite" television station may not be transferred or assigned to a single person, group, or entity except as provided in Note 8.

NOTE 10.—For the purposes of this section a daily newspaper is one which is published four or more days per week, which is in the English language, and which is circulated generally in the community of publication. A college newspaper is not considered as being circulated generally.

NOTE 11.—For the purposes of the three station regional concentration provision of this section, (a) an application raising a regional concentration of control issue which involves one or more UHF television stations will be treated on a case-by-case basis, consistent with the precedents of UHF determinations made under the one-to-a-market proscriptions of this section, and (b) standard and FM broadcast stations licensed to communities which are within 15 miles (city reference point to reference point) and/or within the same urbanized area (as mapped by the U.S. Bureau of the Census), will be considered as a combination and counted as one station.

[§ *73.35 Note 11 added eff. 1-16-78; III (76)-5*]

FEDERAL HOME LOAN BANK BOARD

[H.C. No. 256]

KANEB SERVICES, INC., AND SOUTHWESTERN GROUP FINANCIAL, INC.

Receipt of Application for Approval of the Acquisition of Southwestern Group Financial, Inc.

In the matter of Kaneb Services Inc., 5251 Westheimer, Houston, Tex. 77027 and Southwestern Group Financial, Inc., 333 Southwestern Boulevard, Sugar Land, Tex. 77478.

Notice is hereby given that the Federal Savings and Loan Insurance Corporation has received an application from Kaneb Services, Inc., for approval, pursuant to Section 408(e) of the National Housing Act and Section 584.4 of the Regulations for Savings and Loan Holding Companies, of the acquisition of Southwestern Group Financial, Inc., a savings and loan holding company which controls United Savings Association of Texas, Houston, Texas. Said acquistion is proposed to be accomplished by the merger of Southwestern Group Financial, Inc., into SGF Acquisition Co., a wholly-owned subsidiary of Kaneb Services, Inc. Comments on the proposed acquisition should be submitted to the Director, Office of District Banks, Federal Home Loan Bank Board, 1700 G Street, Washington, D.C. 20552, by November 17, 1978.

Dated: October 13, 1978.

[6325-01-M]

FEDERAL PREVAILING RATE ADVISORY COMMITTEE

OPEN COMMITTEE MEETINGS

Pursuant to the provisions of section 10 of the Federal Advisory Committee Act (Pub. L. 92-463), notice is hereby given that meetings of the Federal Prevailing Rate Advisory Committee will be held on: Thursday, November 2, 1978; Thursday, November 9, 1978; and Thursday, November 30, 1978.

The meetings will convene at 10 a.m., will be held in Room 5A06A, Civil Service Commission Building, 1900 E Street NW., Washington, D.C.

The Federal Prevailing Rate Advisory Committee is composed of a Chairman, representatives of five labor unions holding exclusive bargaining rights for Federal blue-collar employees, and representatives of five Federal agencies. Entitlement to member-

V 4 3 / 2 0 2 0 C 1 8 7 8

ship on the Committee is provided for in 5 U.S.C. 5347.

The Committee's primary responsibility is to review the prevailing rate system and other matters pertinent to the establishment of prevailing rates under subchapter IV, chapter 53, 5 U.S.C., as amended, and from time to time advise the Civil Service Commission thereon.

These scheduled meetings will convene in open session with both labor and management representatives attending. During the meeting either the labor members or the management members may caucus separately with the Chairman to devise strategy and formulate positions. Premature disclosure of the matters discussed in these caucuses would impair to an unacceptable degree the ability of the Committee to reach a consensus on the matters being considered and disrupt substantially the disposition of its business. Therefore, these caucuses will be closed to the public on the basis of a determination made by the Chairman of the Civil Service Commission under the provisions of section 10(d) of the Federal Advisory Committee Act (Pub. L. 92-463) and 5 U.S.C. section 552b(c)(9)(B). These caucuses may, depending on the issues involved, constitute a substantial portion of the meeting.

Annually, the Committee publishes for the Civil Service Commission, the President, and Congress a comprehensive report of pay issues discussed, concluded recommendations thereon, and related activities. These reports are also available to the public, upon written request to the Committee Secretary.

Members of the public are invited to submit material in writing to the Chairman concerning Federal Wage System pay matters felt to be deserving of the Committee's attention. Additional information concerning these meetings may be obtained by contacting the Secretary, Federal Prevailing Rate Advisory Committee, Room 1340, 1900 E Street NW., Washington, D.C. 20415, 202-632-9710.

JEROME H. ROSS,
Chairman Federal Prevailing Rate Advisory Committee.

OCTOBER 12, 1978.

FEDERAL TRADE COMMISSION

TRANSMITTAL RULES

Early Termination of Waiting Period of Premerger Notification Rules

AGENCY: Federal Trade Commission.

ACTION: Granting of request for early termination of the 30-day waiting period of the premerger notification rules.

SUMMARY: The Tappan Co. is granted early termination of 30-day waiting period provided by law and the premerger notification rules with respect to the proposed acquisition by Smith Jones, Inc. of Tappan's air conditioning and heating division. The grant was made by the Federal Trade Commission and the Assistant Attorney General in charge of the Antitrust Division of the Department of Justice in response to a request for early termination submitted by Tappan. Neither agency intends to take any action with respect to this acquisition during the waiting period.

EFFECTIVE DATE: September 27, 1978.

FOR FURTHER INFORMATION CONTACT:

Malcolm R. Pfunder, Associate Director for Premerger Notification, Bureau of Competition, Room 303, Federal Trade Commission, Washington, D.C. 20580, 202-523-3894.

SUPPLEMENTARY INFORMATION: Section 7A of the Clayton Act, 15 U.S.C. § 18a, as added by sections 201 and 202 of the Hart-Scott-Rodino Antitrust Improvements Act of 1976, requires persons contemplating certain mergers or acquisitions to give the Commission and Assistant Attorney General advance notice and to wait designated periods before consummation of such plans. Section 7A(b)(2) of the Act and § 803.11 of the rules implementing the act permit the agencies, in individual cases, to terminate this waiting period prior to its expiration and to publish notice of this action in the FEDERAL REGISTER.

By direction of the Commission.

CAROL M. THOMAS,
Secretary.

Office of Education

ADVISORY COUNCIL ON FINANCIAL AID TO STUDENTS SUBCOMMITTEE ON FEDERAL AND STATE INSURED PROGRAMS

Public Meeting

Notice is hereby given, pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), that the next meeting of the Advisory Council on Financial Aid to Students Subcommittee on Federal and State Insured Programs will be held in the Dynasty Room of Holiday Inn, 1850 North Fort Myer Drive, Arlington, Va. on Thursday, November 2, 1978 and, if business is not concluded, the meeting will be reconvened on Firday, November 3, 1978.

The Advisory Council on Financial Aid to Students is established under section 499(a) of the Higher Education Act of 1965, as amended (20 U.S.C. 1089). The Committee shall advise the Commissioner on matters of general policy arising in the administration by the Commissioner of programs relating to financial assistance to students and on the evaluation of the effectiveness of these programs.

All meetings shall be open to the public. The agenda of the Subcommittee meeting on November 2 shall include discussion of the options to be recommended by the Council for reauthorization by the Congress of the Federal and State Guaranteed Loan Programs.

Records shall be kept of all Council proceedings and will be available for public inspection at the Council's Office, located in Room 3661, Regional Office Building No. 3, 7th and D Streets SW., Washington, D.C. 20202.

Signed in Washington, D.C., on October 13, 1978.

WARREN T. TROUTMAN,
Office of Education Delegate.

Office of the Secretary

OFFICE OF THE ASSISTANT SECRETARY FOR PERSONNEL ADMINISTRATION

Statement of Organization, Functions, and Delegations of Authority

This notice amends and supersedes in its entirely the interim organization of the Office of the Assistant Secretary for Personnel Administration as stated in Part A, Chapter AH, "Office of the Assistant Secretary for Personnel Administration," and published at 42 FR 32846, June 28, 1977. In addition, this notice specifies a reorganization of equal employment activities at the Department level. It supersedes the notice published at 38 FR 16927, June 27, 1973. Also, this notice prescribes a reorganization of personnel management organization at the Department level. It supersedes notices published at 38 FR 34753, December 18, 1973; 40 FR 11626, March 12, 1975; 41 FR 7979, February 23, 1976; 41 FR 27103, July 1, 1976; and 42 FR 18133, April 5, 1977.

The Assistant Secretary for Personnel Administration currently is responsible for Department policies, procedures, and programs covering: Equal employment opportunity, personnel management and operations, and committee management. In addition the office provides administrative support to the Reviewing Authority (Civil Rights) published at 37 FR 7357, April 13, 1972 and 38 FR 1072, January 8, 1973; and the Departmental Grant Appeals Board published at 43 FR 20561, May 12, 1978. The previously published notices for the Reviewing Authority and the Grant Appeals Board will remain in effect.

The goal of the reorganization is to establish a creative personnel system that provides vigorous leadership in the areas of recruitment, training and education, upward mobility, executive development, equal opportunity, employee relations, and employee compensation and benefits. The new chapter reads as follows.

SECTION AH.00 Mission. The Assistant Secretary for Personnel Administration (ASPER) is responsible for administering a responsive, service-oriented personnel system having as its principal objective the Department's missions and programs. The Assistant Secretary provides leadership and direction in the development of policies and procedures related to recruitment, motivation, utilization and training, and career development of departmental officials and employees, consistent with sound personnel management and administration, and with laws, rules, regulations and sound practices related to Federal equal employment opportunity programs.

SEC. AH.10 Organization. The Assistant Secretary for Personnel Administration reports directly to the Secretary and supervises the following offices:

Office of Equal Employment Opportunity.
Office of Personnel.
Office of Special Initiatives.
Executive Office.

The Assistant Secretary also provides administrative support for the Reviewing Authority (Civil Rights) and the Departmental Grant Appeals Board which are organizationaly assigned to his office.

SEC. AH.20 Functions. A. Immediate Office of the Assistant Secretary. Provides executive direction, leadership, and guidance to all ASPER components. Oversees the development and implementation of departmentwide policies and programs covering recruitment, training, and education, upward mobility, executive development, equal employment opportunity, employee relations, and employee compensation and benefits. The Assistant Secretary also serves as the Director for Equal Employment Opportunity for the Department.

B. Office of Equal Employment Opportunity. The office functions under the Deputy Assistant Secretary for EEO who reports directly to the Assistant Secretary and oversees the formulation, interpretation, and implementation of policies and procedures related to the Department's equal employment opportunity programs, activities, and goals. The Deputy Assistant Secretary provides leadership and is responsible for the

implementation of an effective departmental affirmative action plan; the prompt processing of EEO complaints; and the monitoring of employment of minorities and activities related to the status of women.

C. Office of Personnel. The office functions under a Deputy Assistant Secretary for Personnel who reports directly to the Assistant Secretary and is responsible for providing leadership and direction in the formulation and implementation of policies and programs to promote efficient and effective personnel management, training, and administration in the Department. Represents the Department on general personnel matters with the Civil Service Commission, the Congress, other Federal agencies, and the public and in coordination with the Office of the Assistant Secretary for Legislation, and the Congress, oversees the operation of the departmental payroll system.

D. Office of Special Initiatives. Identifies and develops programs within ASPER's functional scope for research and demonstration projects. Provides technical assistance and support services to special assistants assigned to ASPER, agency task forces, and special study groups that are formed to conduct special projects and policy research efforts. Serves as the Department incentive awards office: Formulates policy, develops and coordinates programs, insures activities are in accordance with prescribed regulations, and provides assistance to principal operating components and regional offices on activities related to the Department-wide incentive awards and employee suggestion programs. Acts as the departmental protocol office which has responsibility for the coordination and execution of all arrangements for Secretarial swearing-in ceremonies and other official functions over which the Secretary presides. Provides technical assistance to the Principal Operating Components and other HEW organizations on protocol matters, including providing guidance on funding and administrative support for such activities. Provides guidance on the control and disposal of gifts and decorations from foreign governments.

E. Executive Office. Provides leadership, technical assistance, and staff advice to insure efficient administrative support for the technical operations of the ASPER. Represents the Assistant Secretary in all budgetary and financial matters and is responsible for planning, development, and coordination of the budget; reviews and analyzes all budget requests, prepares operating budgets, and maintains a funds control system. Maintains position control data and oversees the implementation of decisions involving staffing; develops staffing requirements, coordinates recruitment efforts, reviews position descriptions and reviews and coordinates all personel action requests.

Participates in review and planning sessions, advises on the administrative and management implications on policy and program proposals, and participates in work plans, manpower utilization and program operation reviews.

Administers support activities, such as correspondence control, allocation of space, property management, and procurement; assesses organizational staffing and related needs, and develops and provides administrative data pertinent to the overall operation of the organization.

F. Reviewing Authority (Civil Rights). The Reviewing Authority is organizationally assigned to the Office of the Assistant Secretary for Personnel Administration. Chapter AH-1 specifies the mission and functions of the Reviewing Authority.

G. Departmental Grant Appeals Board. The Departmental Grant Appeals Board is organizationally assigned to the Office of the Assistant Secretary for Personnel Administration. Chapter AHF specifies the mission and functions of the GAB.

SEC. AH.30 Order of Sucession. During the absence or disability of the Assistant Secretary for Personnel Administration or in the event of a vacancy in that office, one of the two Deputy Assistant Secretaries will be designated to serve as the Acting Assistant Secretary for Personnel Administration. In the event of the designation of the Deputy Assistant Secretary for Personnel as the Acting Assistant Secretary, the Deputy Assistant Secretary for Equal Employment Opportunity will serve as the Director of Equal Employment Opportunity for the Department.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OFFICE OF THE SECRETARY

Office of Equal Employment Opportunity

SEC. AHE.00 Mission. The Office of Equal Employment Opportunity has responsibility for planning, implementing, and monitoring a Department-wide equal employment opportunity program that assures that current and future employees receive equal consideration for employment and advancement. The office provides leadership, guidance, and assistance to the Department's agencies and regions in the conduct of EEO activities.

SEC. AHE.10 Organization. The Office of Equal employment Opportunity is headed by the Deputy Assistant Secretary for EEO who reports directly to the Assistant Secretary for Personnel Administration and supervises the following offices:

Office of Affirmative Action and Data Analysis.
Handicapped Employment Program.
Office of Complaints analysis and Monitoring.
Minorities Employment Program.
Federal Women's Program.

SEC. AHE.20 Functions. A. The Immediate Office of the Deputy Assistant Secretary for Equal Employment Opportunity provides leadership and guidance to all departmental components in the development and implementation of an effective equal employment opportunity program. In the absence of the Assistant Secretary for Personnel Administration the Deputy Assistant Secretary for EEO is delegated authority to act as the Director Equal Employment Opportunity for the Department.

B. The Office of Affirmative Action and Data Analysis is responsible for the overall management of the Department's affirmative action program for EEO. Recommends policies regarding affirmative action and the minority data system in keeping with Federal legislation and Civil Service Commission requirements; develops and issues guidelines regarding the affirmative action plan process and coverage; coordinates the development of and prepares the final draft of the Department-wide affirmative action plan; controls the development and dissemination of minority employment data in coodination with the HEW personnel data system. Establishes and maintains uniform minority data system to meet the needs of affirmative action planning throughout the Department. Responds to out side requests for employment data, such as those related to complaints interrogatories, GAO reviews, EEO task forces, etc. and requests for standard information and reports from individuals and community groups; reviews and recommends approval or rejection of affirmative action plans for the Office of the Secretary and the principal operating components. Reviews and makes recommendations to the Assistant Secretary for Personnel administration regarding the appropriateness of items submitted by OS and the POC's for the Secretary's major initiatives tracking system (MITS). Provides technical assistance and helps to organize and provide training on affirmative action matters to managers and EEO officials throughout the Department; provides leadership and assistance to POC and regional offices in resolving affirmative action problems; serves as liaison with outside agencies, community groups, and professional associations regarding EEO affirmative action activities in the Department (representing the Department on affirmative action matters).

C. The handicapped employment program provides Department-wide leadership and direction in the development of program policy, goals, and objectives for positive, comprehensive equal employment opportunity for handicapped individuals and disabled veterans in the Department's compliance with Pub. L. 93-112 and 93-508. Provides staff support to the under Secretary and the Assistant Secretary for Personnel Administration in connection with cochairmanship of the Interagency Committee on Handicapped employees. Responsible for the development and implementation of equal employment policies to assure that all reasonable accommodations are made for qualified handicapped individuals in hiring, placement, and advancement, including the elimination or avoidance of architectural, attitudinal, and communications barriers, and through program analysis to allow better evaluation and monitoring for goal accomplishment. Conducts studies and analyzes problem areas concerning handicapped employment and advancement in the Department and designs solutions for improvement. Develops and applicant file for handicapped employees, refers applicants to selective placement coordinators and managers for consideration, and coordinates a referral system among servicing personnel offices. Develops guidelines, criteria, and standards for projecting, measuring, and reporting equal opportunity for handicapped individuals in the Department. Serves as the focal point for liaison with CSC/EEOC, Veterans Administration, and the national headquarters of community organizations seeking to increase employment and advancement for handicapped individuals and disabled veterans. Provides technical direction, advice and assistance to staffs throughout the Department who are engaged in furthering the goals of equal employment opportunity for the handicapped.

D. The Office of Complaints Analysis and Monitoring is responsible for collection, control, and analysis of all data pertaining to the processing of discrimination complaints by POC's regions and the Office of Personnel Systems Integrity, and for the preparation and timely submission of reports required by pertinent CSC regulations. The office is also responsible for providing data

to the Office of Affirmative Action and Data Analysis derived from analysis of the discrimination process for use in Affirmative Action Planning. The office is the offi-

policies and implementation of programs addressing the needs of women. Develops guidelines, criteria, and standards for projecting, measuring and reporting equal op-

nent statutes, executives orders, or directives; and oversees the assembling and maintenance of records required by section 552 of title 5, United States Code.

gration into a single documented and approved personnel/payroll system; provides continuous in-depth research and analysis of personnel transactions to detect and

and above positions. Provides Department representation to the Civil Service Commission on all executive personnel actions.

Dated: October 11, 1978.

LEONARD D. SCHAEFFER,
Assistant Secretary for

V 4 3 / 2 0 2

OCT 18 78

to the Office of Affirmative Action and Data Analysis derived from analysis of the discrimination process for use in Affirmative Action Planning. The office is the official source of information concerning the status of all complaints in the Department, including complaints remanded by appellate authorities; advises the Deputy Assistant Secretary for EEO by (a) monitoring complaints of discrimination to detect indications of discriminatory patterns and practices, (b) reviewing complaint files for quality and identification of deficiencies on the part of counselors, investigators, EEO Officers and such other personnel as may be involved in the processing of discrimination complaints, (c) recommending to the Deputy Assistant Secretary for EEO changes in procedures which would insure equity and improve the efficiency of the complaints process; and (d) recommending to ASPER the assumption of jurisdiction of specific cases, when appropriate. The office assumes jurisdiction of complaints against officials having authority to issue final decisions, arranges for attempts at informal resolution and issues a proposed disposition. Prepares final decisions for ASPER in the above cited circumstances.

E. The minorities employment program provides Department-wide leadership and direction in the development of goals and objectives for positive, comprehensive equal employment opportunity for minorities at all grade levels and in all occupational series. The office is further responsible for the review, development, and implementation of equal employment policies to assure that minorities have the same opportunities for employment and advancement as nonminorities. Conducts studies and analyses of problem areas concerning the employment and advancement of minorities in the Department and designs solutions for improvement. Analyzes and researches aspects of different ethnic cultures affecting conditions of employment and recommends appropriate affirmative action to increase employment for underrepresented minority groups. Develops guidelines, criteria, and standards for projecting, measuring, and reporting equal opportunity for minorities in the Department. Establishes effective relationships with the various minority communities and serves as the focal point for liaison with community and professional organizations seeking to increase employment and advancement for minorities in the Department. Directs a staff engaged in furthering the goals of equal employment opportunity for all minority groups through analysis, identification of problem areas. evaluation of progress, and making recommendations for changes and improvements in program emphasis, policies and goals.

F. The federal women's program provides Department-wide leadership and direction in the development of goals and objectives for positive, comprehensive equal employment opportunity of women at all grade levels and in all occupational series. The office is further responsible for the development and implementation of equal employment policies to assure that minority and nonminority women have the same opportunities for employment and advancement as men. Initiates and conducts studies and analyses of problems areas concerning the emplyment and advancement of women in the Department and designs programs for improvement. Provides Department-wide technical assistance to POC's/PRO's on policies and implementation of programs addressing the needs of women. Develops guidelines, criteria, and standards for projecting, measuring and reporting equal opportunity of women in the Department. Serves as the focal point for liaison with community and professional organizations seeking to increase employment and advancement opportunities for women in the Department. Directs a staff engaged in furthering the goals of equal employment opportunity for women through analyses, identification of problem areas, evaluation of progress, and making recommendations for changes and improvements in program emphasis, policies, and goals.

DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE

OFFICE OF THE SECRETARY

Office of Personnel

SEC. AHP.00 Mission. The Office of Personnel directs the development and impementation of broad program plans under which the Department's personnel and training functions are carried out. The office represents the Department in coordination with the Office of Legislation and the Congress in all personnel matters with the Civil Service Commission, Congress, other Federal agencies and the public. The office provides guidance and assistance to all personnel offices, staff directors, and managers in the Department. The office assures the effectiveness and integrity of the Department personnel system as it relates to all current and potential employees of the Department.

SEC. AHP.10 Organization. The Office of Personnel is headed by the Deputy Assistant Secretary for Personnel who reports directly to the Assistant Secretary for Personnel Administration and supervises the following components: Office of Personnel Policy and Communications, Employee Systems Center, Office of Employee Development, Office of Personnel Systems Integrity.

SEC. AHP.20 Functions. A. The Office of Personnel provides leadership and directs and manages the Department-wide personnel system and the Departmental payroll system.

B. The Office of Personnel Policy and Communications provides leadership in and coordinates the development, issuance, and interpretation of Department personnel policies, regulations and procedures. Plans for and manages special high-priority policy or program development tasks and projects. Develops and administers programs and provides technical advice and assistance to principal operating components in the areas of staffing, position management, classification, pay administration, employee relations, labor-mamagement relations. Coordinates the Department's committee management activities. Develops systems for communicating personnel policies and information.

1. Committee Management Staff: Coordinates Department activities concerned with the establishment, management, and continuation or termination of all HEW public advisory committees and the appointment of members thereto. Gives technical advice and assistance to principal operating component staff with respect to committee management activities, prepares annual reports for the Congress, the Office of Management and Budget, and others as required by pertinent statutes, executives orders, or directives; and oversees the assembling and maintenance of records required by section 552 of title 5, United States Code.

2. Division of Personnel Policy: Coordinates and gives direction to the development and issuance of personnel policies, regulations, and instructions throughout the Department. Manages the systems for communicating personnel policies and information about personnel matters. Provides technical advice and assistance on policy, legal, or regulatory matters. Develops and gives direction to employee relations programs, including employee benefits and services and programs for counseling employees regarding job-related problems. Formulates policies and regulations covering employee conduct, conflicts of interest, adverse actions and grievances, and implements established policy related to the Privacy Act and the Freedom of Information Act concerning personnel records. Coordinates the development and issuance of policies and requirements concerned with processing personnel and payroll actions.

3. Division of Position and Pay Management: Formulates and oversees the implementation of Department-wide policies, regulations, and procedures pertaining to position management, classification, and salary and wage administration programs. Serves as the central HEW reference point for inquiries, guidance, and interpretation on position management, classification, and pay matters, and acts as HEW liaison with the Civil Service Commission with respect to such matters.

4. Division of Staffing: Formulates and oversees the implementation of Department-wide regulations, policies, and procedures pertaining to employement, placement, appraisal, and retention programs. Serves as the central HEW point for inquiries and interpretation for the above-mentioned categories as well as a central source of employment infomation for candidates seeking employment in HEW. Maintains liaison with the Civil Service Commission and other departments and agencies.

5. Division of Labor-Management Relations: Formulates and oversees the implementation of Department-wide policies, regulations, and procedures pertaining to labor-management relations. Serves as the central HEW reference point for inquires, guidance, and interpretation on labor-management relations and acts as HEW liaison with the Civil Service Commission, the Federal Labor Relations Council, the Federal Service Impasses Panel, the Assistant Secretary of Labor for Labor-Management Relations, the Federal Mediation and Conciliation Service and labor unions and other employee organizations at the international and national level. Assists in the formulation of Department personnel and administrative policies, regulations, and procedures affecting working conditions of employees.

C. Employee Systems Center: Develops and manages a timely and accurate automated payroll system for the Department, including required Treasury and GAO records and reports for the civilian workforce of the Department and the PHS Commissioned Corps; operates the Department payroll accounting function, including all required records, reports, certifications, and general ledger data; develops and operates new and updated computer programs and systems to expand personnel and payroll process automation to further achieve integration into a single documented and approved personnel/payroll system; provides continuous in-depth research and analysis of personnel transactions to detect and evaluate trends in workforce composition, turnover, skills, and impact of special emphasis/employment programs, and developing policy or procedural recommendation for Departmental action; produces a full-range of timely and accurate personnel management information reports required by statute, regulation, and those necessary for managerial decisions and information within the Department.

D. Office of Employee Development is responsible for the Department's programs in career development and training and for the personnel management support programs for all positions at the supergrade (GS-16/18) and equivalent levels, the positions under the Executive Schedule, and Schedule C positions at GS-15 and below; develops Departmental policies and guides for program coordination and direction in the above areas and processing actions required to carry out the assigned responsibilities.

1. Immediate Office is responsible for scheduling work projects and coordination of employee development projects which the Assistant Secretary for Personnel Administration has assigned to the office. Provides services in scheduling and programming office support activities for the professional staff of the Office of Employee Development.

2. Educational Program Division is responsible for providing overview, guidance, and technical advisory services to all HEW organizations in employee education programs and career counseling for new arrivals to the Department; enters into formal arrangements with institutions of higher learning (colleges and universities) for HEW full-time permanent employees, special employees, and short-term employees for such programs as Stride, general education programs, the Worker-Trainee Opportunities Program, and cooperative education programs (e.g., Start, Access, Agency Co-ops, and Graduate Student Co-ops).

3. Career Development Division is responsible for providing overview, guidance, policy direction and technical advisory services to all HEW organizations in training programs and executive and functional development and training programs for employees from the sub-journeyman through the executive grades which encompass Federal and Departmental process orientation, management and supervisor development, subject matter/technical training in management occupations; (i.e., budget and finance, personnel procurement and grants management); and executive development programs involving employee training at institutions of higher learning or governmental schools and seminar centers.

4. Executive Search Division is responsible for conducting the search process involved in obtaining talent for the Department's "executive level" positions (i.e., supergrades, equivalents and statutory level positions, as well as Schedule C positions at GS-15 and below).

5. Executive Resources Management Division is responsible for a program of needs assessment for executive positions supported by a system of identifying and determining the priorities of such needs and the system for developing positions for HEW executives. Provides personnel operations for the Office of the Secretary for all GS-16 and above positions. Provides Department representation to the Civil Service Commission on all executive personnel actions.

E. Office of Personnel Systems Integrity (OPSI) provides leadership in assuring the integrity, effectiveness, and impartiality of HEW personnel systems. Serves as a focal point within the Office of the Assistant Secretary for Personnel Administration for functional management analyses and the formulation of plans for future initiatives. Establishes, implements, and directs programs for personnel management evaluation, EEO complaint investigation, grievance examining, personnel security, merit system protection, non-criminal standards-of-conduct investigations, and EEO counselor and investigator training. Establishes and manages field staff units supporting these systems.

1. Analysis and Development Staff develops and analyses a comprehensive base of functional management information in support of the evaluation and future planning activities of the ASPER; makes recommendations concerning prioritizing objectives and resources. Establishes and conducts thorough programs of training in EEO counseling, complaint investigation, and personnel management evaluation. Develops and administers a career program for personnel management staff throughout the Department.

2. Management and Field Liaison Staff provides centralized planning, analysis, and evaluation of OPSI production and management control systems; recommends changes, devises methods of problem avoidance, and assists in implementing recommendations made in these program areas. Provides internal management of resource planning and utilization. Coordinates the activities of Headquarters and field units.

3. Division of Personnel Systems Improvement manages and coordinates the personnel management evaluation program throughout the Department. Develops evaluation techniques; provides guidance to principal operating components and servicing personnel offices, and carries out evaluation activities. Conducts special studies relating to the effectiveness of personnel management programs. Coordinates evaluation activities with the Civil Service Commission.

4. Division of Personnel Investigations assesses allegations, conducts investigations, and makes recommendations for disposition in merit system and non-criminal standards-of-conduct cases. Establishes and maintains an internal employee security program.

5. Division of Employee Appeals impartially examines unresolved grievances submitted under the Department's formal grievance system. Conducts pre-decision hearings on adverse actions. Adjudicates grievance appeals.

6. Division of EEO Complaint Investigations receives and determines acceptance or rejection of EEO formal complaints. Assigns and conducts investigations. Prepares and provides investigation reports to appropriate HEW components.

7. Field Units conduct EEO formal complaint investigations within the respective geographical area. On an as-assigned basis, examines employee grievances, conducts pre-decision hearings on adverse actions, and conducts personnel investigations. Provides an informational contact point, for field employees, regarding OPSI managed systems.

Dated: October 11, 1978.

LEONARD D. SCHAEFFER,
Assistant Secretary for Management and Budget.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Federal Insurance Administration

[Docket No. 4668]

NATIONAL FLOOD INSURANCE PROGRAM

Communities With Flood-Prone Areas Subject to Section 202(A), Prohibition of Federal and Federally Related Assistance

AGENCY: Federal Insurance Administration, Department of Housing and Urban Development.

ACTION: Notice.

SUMMARY: The purpose of this notice is to provide a list of communities that contain areas of special flood hazard potentially subject to the provisions of section 202(A) of the Flood Disaster Protection Act of 1973 (Pub. L. 93-234) on July 1, 1975, or an appropriate later date, and to provide a convenient reference for interested persons, communities, Federal agencies and instrumentalities, and others involved in assuring compliance with that section. This list supersedes and updates the list published in the FEDERAL REGISTER at 43 FR 18268 and all prior lists.

DATES: Section 202(A) applies to the community as of 1 year after the initial date appearing in the last column on each page of this list.

FOR FURTHER INFORMATION CONTACT:

Mr. Richard Krimm, Assistant Administrator, Office of Flood Insurance, Room 5270, 451 Seventh Street SW., Washington, D.C. 20410, 202-755-5581 or toll-free line 800-424-8872.

SUPPLEMENTARY INFORMATION: Section 202(A) provides that effective July 1, 1975, Federal agencies are prohibited from providing financial assistance or making loans for acquisition or construction purposes in areas which (a) have been designated by the Secretary of Housing and Urban Development as special flood hazard areas for at least 1 year; and (b) are in communities which are not participating in the national flood insurance program (42 U.S.C. 4001-4128). Special Flood Hazard Areas are designated as Zones A or V on Federal Insurance Administration Flood Hazard Boundary Maps (FHBM's) or Flood Insurance Rate Maps (FIRM's) and may have a num-

bered suffix indicating the flood hazard zones, for example A1-99 to V1-30.

Each of the communities listed below received notice of its designation as flood-prone prior to April 1, 1978, and legal notice was furnished of such designation by publication under part 1915 of title 24 of the Code of Federal Regulations in the FEDERAL REGISTER. These communities have failed to provide the Federal Insurance Administrator with sufficient technical or scientific data to rebut their designation as flood prone nor have they as yet qualified for participation in the national flood insurance program. Thus, the sanctions of section 202(A) apply as of July 1, 1975, or 1 year after a community's identification, whichever is later, until the community participates in the program.

In order to continue Federal financial assistance of lending for insurable structures in its special flood hazard area, a community must apply for and be made eligible for participation in the program in accordance with 24 CFR (Parts 1909 to 1925). Communities on this list may be made eligible to participate in the program after the date of publication of this list. Such eligibility will be published periodically in the FEDERAL REGISTER under 24 CFR 1914.6 List of eligible communities. At that time the sanctions of section 202(A) will no longer apply to the communities listed below.

CANON CITY GRAZING ADVISORY BOARD, COLORADO

Public Meeting

Pursuant to the Federal Advisory Committee Act (Pub. L. 92-463), notice is hereby given of a meeting of the Canon City District Grazing Advisory Board to be held at 10:30 a.m., Friday, November 17, 1978, at the Ramada Inn, Highway 50, at Dozier Avenue, Canon City, Colo.

The purpose of the meeting will be to review the ongoing planning being done on the Royal Gorge planning area, in preparation for the Royal Gorge grazing environmental statement and to initiate, conduct, and settle business pertaining to expenditure of range betterment funds.

The meeting will be open to the public. However, facilities and space to accommodate members of the public are limited and persons will be accommodated on a first come, first served basis. Any member of the public may file with the Board, a written statement concerning matters to be discussed.

Persons wishing further information concerning the meeting may contact Melvin D. Clausen, District Manager, Bureau of Land Management, 3080

V 4 3 / 2 0 2

OCT 18 78

East Main Street, Canon City, Colo. at 303-275-7494.

Minutes of the meeting will be made available for public inspection 30 days after the meeting.

Dated: October 10, 1978.

MELVIN D. CLAUSEN,
District Manager.

NEW MEXICO

Application

OCTOBER 10, 1978.

Notice is hereby given that, pursuant to section 28 of the Mineral Leasing Act of 1920 (30 U.S.C. 185), as amended by the Act of November 16, 1973 (87 Stat. 576), El Paso Natural Gas Co. has applied for one 8⅝-inch natural gas pipeline and related facilities right-of-way across the following land:

NEW MEXICO PRINCIPAL MERIDIAN, NEW MEXICO

T. 29 N., R. 8 W.,
Sec. 21 E½NE¼, SW¾NE¼, E½SW¼, SW¾SW¼ and NW¼SE¼; Sec. 28, W½NW¼ and NW¼SW¼.

This pipeline will convey natural gas across 1.686 miles of public land in San Juan County, N. Mex.

The purpose of this notice is to inform the public that the Bureau will be proceeding with consideration of whether the application should be approved, and if so, under what terms and conditions.

Interested persons desiring to express their views should promptly send their name and address to the District Manager, Bureau of Land Management, P.O. Box 6770, Albuquerque, N. Mex. 87107.

FRED E. PADILLA,
Chief, Branch of Lands and Minerals Operations.

WORLAND DISTRICT GRAZING ADVIORY BOARD MEETING

Meeting

Notice is hereby given, in accordance with the Federal Advisory Committee Act (Pub. L. 92-463), that a meeting of the Worland District Grazing Advisory Board will be held at 9 a.m., November 21, 1978, in the conference room of the BLM office in Worland, Wyo.

The agenda for this meeting includes; (1) discussion and recommendation for 1979 fiscal year range improvement projects, (2) opportunity for public comment, and (3) date and agenda for next meeting.

The meeting will be open to the public. Interested persons may make oral statements to the board, or file written statements for the board's consideration. Anyone wishing to make an oral statement must notify the District Manager, Bureau of Land Management, 1700 Robertson, Worland, Wyo. 82401, by 4:30 p.m., November 17, 1978.

Summary minutes of this meeting will be on file in the district office and available for public inspection (during regular business hours) within 30 days following the meeting.

JOHN A. KWIATKOWSKI,
District Manager.

PROPOSED DEVELOPMENT OF COAL RESOURCES IN SOUTH CENTRAL WYOMING

Availability of Draft Environmental Statement

Pursuant to section 102(2)(c) of the National Environmental Policy Act of 1969, notice is hereby given that the Bureau of Land Management, U.S. Department of the Interior, has prepared an environmental statement on proposed development of coal resources in south central Wyoming, and has made copies of the document available for public review and comment. The draft statement analyzes environmental impacts that would result from development of three (3) site specific surface coal mines. The statement further analyzes the cumulative regional environmental impacts of proposed coal development and other regional development, and presents two additional regional coal development scenarios (low level and high level), for comparison with the most probable level (proposed actions).

Copies of the draft statement are available for inspection at the following locations (see attached list).

Single copies of the draft statement can be obtained from the Team Leader, Bureau of Land Management, Wyoming State Office, 2515 Warren Avenue, P.O. Box 1828, Cheyenne, Wyo., 82001.

Written comments on the draft environmental statement will be accepted on or before November 29, 1978. They are to be addressed to Ed Coy, Team Leader, Bureau of Land Management, Southcentral Wyoming Coal Environmental Statement, P.O. Box 670, Rawlins, Wyo. 82301.

Oral and written comments will also be received at public hearings on November 14, 1978, at the National Guard Armory, 3d and Ryan, Rawlins, Wyo. Hearing sessions will begin at 1:30 and 7:30 p.m.

Oral testimony of 10 minutes duration will be accepted from each witness at the hearing, in lieu of written comments or in addition to any written comments submitted by such a witness. The 10 minute limitation will be strictly enforced by the presiding officer. Complete text of prepared speeches may be filed at the hearing whether or not the speaker has been able to finish with oral delivery in the allotted 10 minutes.

Speakers will be heard in their established order on the witness list. After the last listed witness has been heard, the presiding officer will consider the request of any other person present and wishing to testify. Only one witness will be allowed to represent the view points of a single organization. However, any witness will be permitted to give germane testimony if offered as the views or opinions of a private citizen.

Written requests to testify orally should be received at the Rawlins District Office of the Bureau of Land Management at the above address prior to close of business on November 10, 1978. Requests should identify the organization represented, should be signed by the prospective witness, and should state the approximate time (afternoon or evening) for giving oral testimony. The cutoff date is necessary so that a witness list can be made available in the Rawlins District Office on the day before the public hearing.

Comments on the draft environmental statement, whether written or oral, will receive equal consideration in preparation of a final environmental statement.

ARNOLD E. PETTY,
Acting Associate Director, Bureau of Land Management.

Approved:

LARRY E. MEIEROTTO,
Deputy Assistant Secretary of the Interior.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[Docket No. 77-35]

DONALD G. KLINESTIVER, M.D.

Revocation of Registration

On October 14, 1977, the Administrator of the Drug Enforcement Administration (DEA) issued to Donald G. Klinestiver, M.D. (Respondent), an Order to Show Cause proposing to revoke the Respondent's DEA Certificate of Registration, AK2988674, for reason that on August 15, 1977, in the United States District Court for the Southern District of West Virginia, the Respondent was convicted as charged of violating Title 21, United States Code, section 841(a)(1), a felony relating to controlled substances.

The Respondent requested a hearing on the issues raised by the Order to Show Cause. On May 11, 1978, subsequent to the Respondent's release from a Federal penal institution, a hearing was held at Washington, D.C. The Honorable Francis L. Young, Administrative Law Judge, presided. The Respondent appeared at the hearing and was accompanied by counsel.

On August 25, 1978, pursuant to 21 CFR 1316.65, Judge Young certified to the Administrator the record of these proceedings, together with opinion and recommended ruling, findings of fact, conclusions of law and a recommended dicision.

Having reviewed the record of these proceedings in its entirety, the Administrator, pursuant to 21 CFR 1316.66, hereby publishes his final order in this matter based on the following findings of fact and conclusions of law.

The Administrator finds that on August 15, 1977, in the United States District Court for the Southern District of West Virginia, following his plea of nolo contendere to Count Thirteen of the Fifteen Count Indictment in Criminal No. 77-30006-01, the Respondent was convicted as charged of violating Title 21, United States Code, section 841(a)(1). The Administrator further finds that the Respondent has been convicted of a felony offense relating to controlled substances and concludes that there is a lawful basis for revocation of the Respondent's registration pursuant to 21 U.S.C. 824(a)(2). The Administrator hereby adopts and incorporates in their entirety, the recommended findings of fact and conclusions of law of the Administrative Law Judge.

The Administrative Law Judge concluded that the preponderance of the credible, probative, relevant and material evidence in this record shows that the Respondent's DEA registration should be revoked. The Administrative Law Judge, in discussing his recommended decision, stated that in his opinion, the "Respondent is not merely an ordinary citizen here accused of wrongdoing. He is a physician of whom high standards of professional conduct are expected with respect to the handling of drugs. He has chosen not to contest a charge of possessing a quantity of marihuana with intent to distribute it. This fact, together with (other reliable information in the record) shows that Respondent should not be trusted with the power to dispense controlled substances." The Administrator concurs.

Accordingly, pursuant to the authority vested in the Attorney General by section 304 of the Controlled Substances Act, 21 U.S.C. 824, and redelegated to the Administrator of the Drug Enforcement Administration in 28 CFR 0.100, the Administrator hereby orders that DEA Certificate of Registration AK2988674, previously issued to Donald G. Klinestiver, M.D., be, and it hereby is, revoked, effective immediately.

Dated: October 11, 1978.

PETER B. BENSINGER,
Administrator, Drug Enforcement Administration.

[4410-09-M]

MANUFACTURE OF CONTROLLED SUBSTANCES

Registration

By Notice dated August 9, 1978, and published in the FEDERAL REGISTER on August 17, 1978 (43 FR 36524), Collaborative Research, Inc., 1365 Main Street, Waltham, Mass. 02154, made application to the Drug Enforcement Administration to be registered as a bulk manufacturer of lysergic acid diethylamide (7315), a basic class of controlled substance listed in schedule I.

No comments or objections having been received, and pursuant to section 303 of the Comprehensive Drug Abuse Prevention and Control Act of 1970 and Title 21, Code of Federal Regulations section 1301.54(e), the Administrator hereby orders that the application submitted by the above firm for registration as a bulk manufacturer of the basic class of controlled substances listed above is granted.

Dated: October 10, 1978.

PETER B. BENSINGER,
Administrator,
Drug Enforcement Administration.

Law Enforcement Assistance Administration

STATE PLANNING AGENCY GRANTS

Request for Public Comments

AGENCY: Law Enforcement Assistance Administration, Justice.

ACTION: Request for public comment.

PURPOSE: The Law Enforcement Assistance Administration (LEAA) is publishing the text of proposed change 4 to Guideline Manual M4100.1F, State Planning Agency Grants, in order to obtain comments on the proposed changes. Publication in the FEDERAL REGISTER is in response to the Department of Justice's draft report on implementation of Executive Order 12044 (43 FR 22922, May 26, 1978). All comments will be considered in the publication of the final guideline change. Copies of M4100.1F, as amended, may be obtained from LEAA.

SUMMARY: Change 4 modifies submission dates for fiscal year 1980 planning and block grant applications, amends the general grant conditions and assurances to insure compliance with Federal law regarding the use of electronic surveillance equipment, and clarifies assumption of cost policy requirements in respect to juvenile justice projects. Since fiscal year 1980 is both a transition year in the LEAA program and the final year of the 3-year plan approval cycle, proposed changes to M4100.1F have been kept to a minimum. Once the change is finalized, holders of M4100.1F, State Planning Agency Grants, will receive in accordance with normal LEAA procedures a copy of change 4 along with replacement pages for insertion in the manual.

EXPLANATION OF PROPOSED CHANGE: Change 4 to LEAA Guideline Manual M4100.1F, State Planning Agency Grants, makes the following revisions:

1. Chapter 1, paragraph 7, is modified to require the submission of fiscal year 1980 planning grant applications by May 31, 1979, and fiscal year 1980 block grant applications by July 31, 1979.

2. Chapter 3, paragraph 43, is modified to suggest the following timetable for phased submission of fiscal year 1980 comprehensive plan components where such submission is necessary:

Comprehensive plan component and submission date
(1) Crime analysis; (2) resources, manpower, organizations, capabilities, and systems; and (3) problem analysis, March 30, 1979.
(1) Goals and objectives; (2) criminal justice standards; and (3) priorities, May 30, 1979.
(1) Comprehensive multiyear action plan; (2) annual action plan; and (3) program descriptions, July 31, 1979.

3. Chapter 3, paragraph 63, is modified to require the submission by the State planning agency of a report on plan implementation by no later than August 31, 1979. Paragraph 63 is further modified to delete subsection 63a(2)(b) in its entirety. Information about continuation support for programs and projects previously funded with block grant moneys is no longer required as part of the State report on plan implementation, since it will be obtained by other means.

4. Appendix 4, "General Grant Conditions and Assurances," paragraph 3, is modified to add at the end of the paragraph the following: "The State further agrees that any application for funds, technical assistance, or training involving purchase or use of electronic surveillance equipment to monitor wire or oral communications or other action touching on the subject of electronic surveillance of such communications, will be reviewed to assure that the State has enacted enabling legislation pursuant to 18 U.S.C. § 2516(2) or meets the requirements of the special justification in appendix 5."

5. Appendix 5, "Explanation of General Grant Conditions and Assurances" is modified to add the following paragraph:

"Electronic surveillance. Under 18 U.S.C. § 2512, transactions involving devices "primarily useful for the purpose of the surreptitious interception of wire or oral communication," advertisement thereof, and advertising which promotes the use of any devices for such purposes are prohibited unless, in the case of a State officer, his conduct with regard to such a device falls within "the normal course of activities of • • • (the) State • • •" 18 U.S.C. § 2512(2)(b).

Normally, officers of a State which has no enabling statute under 18 U.S.C. § 2516(2) would have no occasion to use, possess, or otherwise deal with devices within the scope of 18 U.S.C. § 2512(1). Without such legislation only consensual use is permitted. No grants relating to such devices and their use will be authorized in States which do not have enabling legislation unless special justification, as explained below, is furnished. Accordingly, all applications that list the acquisition of equipment, with either Federal or matching funds, that may be utilized for electronic surveillance purposes, in a State that does not have any enabling legislation, must include as part of the budget narrative for such equipment the following information:

1. A complete description of each item of equipment to be obtained,

2. A statement of how each item of equipment will be used,

3. The legal citations and justifications for the purchase and intended use of each item of equipment,

4. A description of the controls to be established over access to, the use of and ultimate disposal of such equipment.

Each application must contain the following statement signed by the Project Director: "(Applicant) agrees not to purchase or use in the course of this project any electronic, mechanical, or other device for surveillance purposes in violation of 18 U.S.C. § 2511 and any applicable State statute related to wiretapping and surveillance."

The SPA will review all grant application to assure compliance "

6. Chapter 2, paragraph 15 is modified to clarify that States may continue juvenile justice and delinquency prevention projects funded under the Omnibus Crime Control and Safe Streets Act of 1968, as amended, for a period beyond the maximum length of time allowed under the assumption of costs policy. The State planning agency may extend a project for 1 year with possible extension for 1 additional year, based upon the following criteria:

a. The project has been evaluated, and the evaluation indicates that the project is effective and is being operated efficiently;

b. Discontinuation would have a negative impact on State or local juvenile-related activities; and

c. The project has demonstrated a good faith effort to obtain funding elsewhere and intends to continue such efforts over the period of the extension.

DATE: Comments are due on or before December 18, 1978.

ADDRESS: Send comments to James M. H. Gregg, Acting Administrator, Law Enforcement Assistance Administration, U.S. Department of Justice, 633 Indiana Avenue NW., Washington, D.C. 20531.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 78-45]

SARTORIUS GMBH

Intent To Grant Foreign Exclusive Patent License

In accordance with the NASA Foreign Licensing Regulations, 14 CFR 1245.405(e), the National Aeronautics and Space Administration announces its intention to grant to the Sartorius GmbH, Gottingen, West Germany, an exclusive patent license in Canada, France, Great Britain, Japan, Spain, Switzerland and West Germany for the NASA owned invention covered by the foreign counterparts of U.S. Patent No. 4,061,561 for "Automatic Multiple-Sample Applicator and Electrophoresis Apparatus", issued to NASA on December 6, 1977. Copies of the above identified U.S. Patent can be purchased from the U.S. Patent and Trademark Office, Department of Commerce, Washington, D.C., 20231, for a $.50 a copy. Interested parties should submit written inqulries or comments on or before December 18, 1978, to the Assistant General Counsel for Patent Matters, Code GP-4, National Aeronautics and Space Administration, Washington, D.C., 20546.

Dated: October 12, 1978.

S. NEIL HOSENBALL,
General Counsel.

NATIONAL FOUNDATION ON THE ARTS AND HUMANITIES

LITERATURE ADVISORY PANEL

Meeting

Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92-463), as amended, notice is hereby given that a meeting of the Literature Advisory Panel to the National Council on the Arts will be held on November 3, 1978, from 9 a.m. to 5:15 p.m.; on November 4, 1978, from 9 a.m. to 5:15 p.m.; and on November 5, 1978, from 9 a.m. to 3:15 p.m., in Room 1422, Columbia Plaza Office Building, 2401 E Street NW., Washington, D.C. 20506.

A portion of this meeting will be open to the public on November 4, 1978, from 2 to 5:15 p.m., and on November 5, 1978, from 9 a.m. to 3:15 p.m. There will be an open discussion with members of the public and a discussion of guidelines.

The remaining sessions of this meeting on November 3, 1978, from 9 a.m. to 5:15 p.m.; on November 4, 1978, from 9 a.m. to 2 p.m. are for the purpose of Panel review, discussion, evaluation, and recommendation on applications for financial assistance under the National Foundation on the Arts and the Humanities Act of 1965, as amended, including discussion of information given in confidence to the agency by grant applicants. In accordance with the determination of the Chairman published in the FEDERAL REGISTER, March 17, 1977, these sessions will be closed to the public pursuant to subsections (c) (4), (6) and 9 (b) of section 552b of title 5, United States Code.

Further information with reference to this meeting can be obtained from Mr. John H. Clark, Advisory Committee Management Officer, National Endowment for the Arts, Washington, D.C. 20506, or call 202-634-6070.

JOHN H. CLARK,
Director, Office of Council and Panel Operation, National Endowment for the Arts.

NUCLEAR REGULATORY COMMISSION

ADVISORY COMMITTEE ON REACTOR SAFEGUARDS

Meeting

In accordance with the purposes of sections 29 and 182b. of the Atomic Energy Act (42 U.S.C. 2039, 2232 b.), the Advisory Committee on Reactor Safeguards will hold a meeting on November 2-4, 1978, in Room 1046, 1717 H Street NW., Washington, D.C.

The agenda for the subject meeting will be as follows:

THURSDAY, NOVEMBER 2, 1978

8:30 a.m.-9:30 a.m.: Executive Session (Open)—The Committee will hear and discuss the report of the ACRS Chairman regarding miscellaneous matters relating to ACRS activities. The Committee will also review proposed items for discussion with the

V 4 3 1 2 0 2 0 C 1 8 7 8

Nuclear Regulatory Commission (NRC) Commissioners.

9:30 a.m.-10:45 a.m.: Meeting with NRC Commissioners (Open)—The ACRS will meet with the NRC Commissioners to discuss matters relating to conduct of ACRS activities, generic matters related to light water reactor safety, and procedures for implementation of ACRS recommendations.

11 a.m.-12:30 p.m. and 1:30 p.m.-4 p.m.: Fast Flux Test Facility (Open)—The Committee will hear and discuss presentations by representatives of the NRC staff, the Department of Energy and their contractors regarding proposed operation of the Fast Flux Test Facility.

4 p.m.-6:30 p.m.: Executive Session (Open)—The Committee will hear and discuss reports of its Subcommittees on matters related to light water reactor safety including proposed replacement, repair and modification of PWR steam generators; consideration of system interractions at nuclear power plants including review of the Zion Station Units 1 and 2; and the proposed planning basis for development of radiological response plants (NUREG-0396).

FRIDAY, NOVEMBER 3, 1978

8:30 a.m.-10:30 a.m.: Meeting with NRC Staff (Open)—The Committee will hear and discuss reports on recent operating experience and licensing actions including review of pump house settlement at the North Anna Nuclear Station. The Committee will also hear and discuss a report of the Code Assessment Group regarding development of alternate ECCs evaluation models. The anticipated schedule for future Committee activities will also be discussed.

10:45 a.m.-1 p.m. and 2 p.m.-5:15 p.m.: Reactor Safety Research (Open)—The Committee will hear presentations from and hold discussions with representatives of the NRC staff regarding proposed safety research relating to nuclear plant risk assessment.

5:15 p.m.-7 p.m.: Executive Session (Open)—The Committee will discuss its proposed report to NRC regarding the Fast Flux Test Facility and its annual report to Congress regarding the NRC Safety Research Program.

SATURDAY, NOVEMBER 4, 1978

8:30 a.m.-2:30 p.m.: Executive Session (Open)—The Committee will complete its report to the NRC regarding proposed operation of the Fast Flux Test Facility, continue discussion of its annual report to Congress on the NRC Safety Research Program, and discuss its position regarding other matters considered during this meeting.

Procedures for the conduct of and participation in ACRS meetings were outlined in the FEDERAL REGISTER on October 4, 1978, page 45926. In accordance with these procedures, oral or written statements may be presented by members of the public, recordings will be permitted only during those portions of the meeting when a transcript is being kept, and questions may be asked only by members of the Committee, its consultants, and Staff. Persons desiring to make oral statements should notify the ACRS Executive Director as far in advance as practicable so that appropriate arrangements can be made to allow the necessary time during the meeting for such statements.

Background information concerning items to be considered during this meeting can be found in documents on file and available for public inspection as appropriate in the NRC's Public Document Room, 1717 H Street NW., Washington, D.C. 20555.

Further information regarding topics to be discussed, whether the meeting has been canceled or rescheduled, the Chairman's ruling on requests for the opportunity to present oral statements and the time allotted therefor can be obtained by a prepaid telephone call to the ACRS Executive Director, Mr. Raymond F. Fraley (telephone 202-634-3265), between 8:15 a.m. and 5 p.m. e.d.t.

Dated: October 13, 1978.

JOHN C. HOYLE,
Advisory Committee Management Officer.

[Docket No. 50-313]

ARKANSAS POWER & LIGHT CO.

Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 36 to Facility Operating License No. DPR-51, issued to Arkansas Power & Light Co. (AP&L or the licensee), which revised the Technical Specifications for operation of Arkansas Nuclear One, Unit No. 1 (ANO-1 or the facility) located in Pope County, Ark. The amendment is effective as of its date of issuance.

The amendment modifies the Technical Specifications for ANO-1 to allow the handling of a 25 ton shielded shipping cask on one time basis to remove and ship irradiated B_4C test rods which are stored in the ANO-1 fuel storage pool.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4) an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the licensee's filing dated July 19, 1978, as supplemented September 25, 1978, (2) Amendment No. 36 to License No. DPR-51, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. and at the Arkansas Polytechnic College, Russellville, Ark. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, attention: Director, Division of Operating Reactors.

Dated at Bethesda, Md., this 5th day of October 1978.

For the Nuclear Regulatory Commission.

ROBERT W. REID,
Chief, Operating Reactors Branch No. 4, Division of Operating Reactors.

[7590-01]

[Docket Nos. 50-329-OL, 50-330-OL]

CONSUMERS POWER CO. (MIDLAND PLANT, UNITS 1 AND 2)

Hearing on Issuance of Facility Operating License

On May 4, 1978 the Nuclear Regulatory Commission published in the FEDERAL REGISTER a notice of an opportunity for a hearing with respect to the application for an operating license by the applicant, Consumers Power Co. 43 FR 19304. The license would authorize the applicant to possess, operate and use two light water nuclear power reactors, Units 1 and 2, at its Midland Plant in Midland County, Mich. Each unit would operate at a core power level of 2,452 megawatts thermal with a combined electric output of approximately 1,300 megawatts.

The notice provided that any person whose interest may be affected by the proceeding may file a petition for leave to intervene and request a hearing pursuant to 10 CFR 2.714 on or before June 5, 1978. By petition dated June 1, 1978, Mrs. Mary P. Sinclair requested a hearing and leave to intervene on behalf of the Saginaw Valley Nuclear Study Group (Saginaw). Frank J. Kelly, the Attorney General of the State of Michigan, filed a petition for leave to intervene dated June 2, 1978. An Atomic Safety and Licensing Board was designated to rule upon intervention petitions and requests for hearings.

By Memorandum and Order dated August 14, 1978 the Board designated to rule upon petitions ordered a hearing upon the application, granted the petition filed by Mrs. Sinclair to the extent that it represented her individual interests in the proceeding, denied the petition with respect to Saginaw, and granted the Attorney General the right to participate in the hearing pursuant to 10 CFR 2.715(c). Saginaw and the Attorney General were granted leave to file additional intervention papers. Also pending is an intervention petition dated September 8, 1978 filed by Mr. Wendall H. Marshall on behalf of Mapleton Intervenors.

An Atomic Safety and Licensing Board was designated to preside over the evidentiary hearings. The members of the Board are Dr. Frederick P. Cowan, Mr. Lester Kornblith, Jr., and Mr. Ivan W. Smith who will serve as chairman of the Board. Pursuant to the provisions of 10 CFR 2.751(a) the Board will conduct a special prehearing conference on November 15, 1978 beginning at 9:30 A.M. at the 75th District Court, Courtroom No. 2, Courthouse, Midland, Mich. 48640.

The parties to this proceeding, or their respective counsel are directed to attend. At the special prehearing conference the Board will consider all intervention petitions, discuss specific issues to be considered at the evidentiary hearing, and will consider a schedule for further actions in the proceeding.

The public is invited to attend the prehearing conference but space is limited. Depending upon space and time limitations the Board will try to afford an opportunity for members of the public who are not parties to the proceeding to make oral limited appearance statements at the prehearing conference. Additional opportunities for limited appearance statements will be afforded at subsequent evidentiary hearings. Any person may request permission to make a limited apearance pursuant to provisions of 10 CFR 2.715 of the Commission's "Rules of Practice." Persons desiring to make a limited appearance statement are requested to inform the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555. Written limited appearance statements may be mailed to the Secretary or presented to the Board at the special prehearing conference or at any subsequent sessions of the evidentiary hearing.

For further details see the application for the facility operating licenses dated August 29, 1977, and the applicant's Environmental Report dated March 1, 1978, which are available for public inspection at the Commission's Public Document Room, 1717 H Street, NW., Washington, D.C., and at the Grace Dow Memorial Library, 1710 West St. Andrews Road, Midland, Mich. 48640. As they become available, the following documents may be inspected at the above locations: (1) The Safety Evaluation Report prepared by the Office of Nuclear Reactor Regulations; (2) the Draft Environmental Statement; (3) the Final Environmental Statement; (4) the report of the Advisory Committee on Reactor Safeguards (ACRS) on the application for facility operating licenses; (5) the proposed facility operating licenses; (6) the technical specifications, which will be attached to the proposed facility operating licenses; and (7) the intervention petitions, related papers and the Board's memorandum and order dated August 14, 1978.

It is so ordered.

Dated at Bethesda, Md., this 12th day of October 1978.

For the Atomic Safety and Licensing Board, designated to rule on petitions for leave to intervene.

IVAN W. SMITH,
Chairman.

SUMMARY: This document provides

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the

V 43/202 OCT 78

Power and Light Co., and Atlantic City Electric Co., which revised Technical Specifications for operation of the Peach Bottom Atomic Power Station, Units Nos. 2 and 3, located in Peach Bottom, York County, Pa. The amendments are effective as of the date of issuance.

The amendments revise the Technical Specifications which relate to: (1) The instrumentation that initiates or controls the core and containment cooling systems, (2) Administrative Controls, (3) addition of safety related snubbers, (4) certain revisions that would conform to the Staff's Standard Technical Specifications, and (5) various editorial changes to clarify the meaning or correct errors in the existing specifications.

The applications for the amendments comply with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendments. Prior public notice of these amendments was not required since the amendments do not involve a significant hazards consideration.

The Commission has determined that the issuance of the amendments will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4), an environmental impact statement or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of these amendments.

For further details with respect to this action, see (1) the application for amendments dated May 26 and September 5, 1978, (2) Amendments Nos. 47 and 47 to License DPR-44 and DPR-56, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street NW., Washington, D.C. and at the Government Publications Section, State Library of Pennsylvania, Education Building, Commonwealth and Walnut Street, Harrisburg, Pa. 17126. A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Operating Reactors.

Dated at Bethesda, Md., this 10th day of October 1978.

For the Nuclear Regulatory Commission.

PORTLAND GENERAL ELECTRIC CO., ET AL. (TROJAN NUCLEAR PLANT)

Evidentiary Hearing on Issue of Interim Operation, and Limited Appearances

OCTOBER 11, 1978.

Pursuant to a Notice of Evidentiary Hearing filed in this proceeding on August 1, 1978 and duly published in the FEDERAL REGISTER, as well as telegraphic notices of the new date of such hearing given to the parties and counsel on October 1, 1978, please take notice that an evidentiary hearing on Issue No. 1 ("(1) Whether Interim Operation Prior to the Modifications required by this Order should be permitted"), will be held on October 23-25, 1978 and October 30 through November 3, 1978 at 9 a.m., local time, at the State Capitol, Hearing Room A, Salem, Oreg. 97310.

Persons who have filed a request for permission to make a limited appearance and/or to make an oral or written statement in this proceeding, may make such limited appearances at 9 a.m., local time, on October 26 and 27, 1978 at the Bonneville Power Administration Auditorium, 1002 N.E. Holladay Street, Portland, Oreg. 97205.

It is so ordered.

Dated at Bethesda, Md., this 11th day of October 1978.

For the Atomic Safety and Licensing Board.

[Docket No. 50-271]

VERMONT YANKEE NUCLEAR POWER CORP.

Issuance of Amendment to Facility Operating License

The U.S. Nuclear Regulatory Commission (the Commission) has issued Amendment No. 47 to Facility Operating License No. DPR-28, issued to Vermont Yankee Nuclear Power Corp. which revised Technical Specifications for operation of the Vermont Yankee Nuclear Power Station (the facility) located near Vernon, Vt. The amendment is effective as of its date of issuance.

This amendment changes the Technical Specifications to permit operation of the facility in the sixth fuel cycle, following the first refueling, during which 96 of the 368 fuel assemblies were replaced.

The application for the amendment complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations. The Commission has made appropriate findings as required by the Act and the Commission's rules and regulations in 10 CFR Chapter I, which are set forth in the license amendment. Prior public notice of this amendment was not required since the amendment does not involve a significant hazards consideration.

The Commission has determined that the issuance of this amendment will not result in any significant environmental impact and that pursuant to 10 CFR 51.5(d)(4) an environmental impact statement, or negative declaration and environmental impact appraisal need not be prepared in connection with issuance of this amendment.

For further details with respect to this action, see (1) the application for amendment dated June 21, 1978, as supplemented July 12, August 30, and September 20, 1978, (2) Amendment No. 47 to License No. DPR-28, and (3) the Commission's related Safety Evaluation. All of these items are available for public inspection at the Commission's Public Document Room, 1717 H Street, NW., Washington, D.C. and at the Brooks Memorial Library, 224 Main Street, Brattleboro, Vt.

A copy of items (2) and (3) may be obtained upon request addressed to the U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, Attention: Director, Division of Operating Reactors.

Dated at Bethesda, Md., this 10th day of October, 1978.

For the Nuclear Regulatory Commission.

[3110-01-M]

OFFICE OF MANAGEMENT AND BUDGET

UNIFORM ADMINISTRATIVE REQUIREMENTS FOR GRANTS-IN-AID TO STATE AND LOCAL GOVERNMENTS

This notice offers interested parties an opportunity to comment on a proposed revision to OMB Circular No. A-102, "Uniform administrative requirements for grants-in-aid to State and local governments." The revision would bring the grant payment policies of the Circular into line with the cash management policies of the Department of the Treasury. The Treasury regulations provide that Federal cash made available to recipients of grants shall be timed to coincide with their cash needs.

Circular A-102 provides that recipients of grants may be paid on an advance basis or on a reimbursement basis. Where reimbursement is used, the Circular provides that it may be for actual cash disbursements, or for the cost of goods and services that have been received by the grantee but not yet paid for. Consequently, there have been instances where Federal payments to recipients included amounts that are withheld by the recipient from contractors to assure satisfactory completion of the contract. The time lapse from the point the recipient received payment and the contractor was paid in full has varied from thirty days to more than a year. This practice resulted in interest costs to the Federal Government that could have been avoided.

It is proposed that the following be added to paragraph 5, Attachment J., "Grant Payment Requirements":

"When the reimbursement method is used, recipients shall only be reimbursed for amounts that have actually been paid to contractors. They shall not be reimbursed for amounts that are to be withheld to assure satisfactory completion of the work. These reimbursements will be made when recipients make final payments to contractors, including amounts withheld."

The Office of Management and Budget has, as yet, made no decision with respect to the proposed revision. All interested parties are encouraged to make their views known. Comments should be submitted in duplicate to the Financial Management Branch, Budget Review Division, Office of Management and Budget, Washington, D.C. 20503. All comments should be received on or before December 1, 1978.

VELMA N. BALDWIN,
Assistant to the Director for Administration.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

PRIVATE TAX-EXEMPT SCHOOLS

Public Hearing on Proposed Revenue Procedure

AGENCY: Internal Revenue Service, Treasury.

ACTION: Public hearing on proposed revenue procedure.

SUMMARY: This document provides notice of a public hearing on a proposed revenue procedure relating to private tax-exempt schools.

DATES: The public hearing will be held on December 5, 1978, beginning at 10 a.m. Outlines of oral comments must be delivered or mailed by November 20, 1978.

ADDRESS: The public hearing will be held in the IRS Auditorium, Seventh Floor, 7400 Corridor, Internal Revenue Building, 1111 Constitution Avenue NW., Washington, D.C. The outlines should be submitted to the Commissioner of Internal Revenue, Attn: E:EO, Washington, D.C. 20224.

FOR FURTHER INFORMATION CONTACT:

James E. Griffith, Exempt Organizations Division, Internal Revenue Service, Washington, D.C. 20224, 202-566-6181.

SUPPLEMENTARY INFORMATION: The subject of the public hearing is a proposed revenue procedure that sets forth guidelines the Internal Revenue Service will apply in determining whether certain private schools have racially discriminatory policies as to students and therefore are not qualified for tax exemption under section 501(c)(3) of the Internal Revenue Code of 1954. The proposed revenue procedure was announced on August 21, 1978, in a News Release IR-2027, and also appeared in the FEDERAL REGISTER for Tuesday, August 22, 1978, at page 37296 (43 FR 37296).

The rules of section 601.601(a)(3) of the "Statement of Procedural Rules" (26 CFR Part 601) shall apply with respect to the public hearing. Persons who want to speak at the hearing should submit written comments by October 23 and also send an outline of their oral comments and the time they wish to devote to each subject to the Service by November 20, 1978. Persons who have already submitted written comments and who wish to testify should submit an outline of their oral comments and the time they wish to devote to each subject by November 20, 1978. Each speaker will be limited to 10 minutes for an oral presentation exclusive of time consumed by questions from the panel for the Service and answer to these questions.

Because of controlled access restriction, attendees cannot be admitted beyond the lobby of the Internal Revenue Building until 9:45 a.m.

An agenda showing the scheduling of the speakers will be made after outlines are received from the speakers. Copies of the agenda will be available free of charge at the hearing.

This document does not meet the criteria for significant regulations set forth in paragraph 8 of the proposed Treasury directive appearing in the FEDERAL REGISTER for Wednesday, May 24, 1978.

JEROME KURTZ,
Commissioner of Internal Revenue.

INTERSTATE COMMERCE COMMISSION

[Notice No. 191]

MOTOR CARRIER TEMPORARY AUTHORITY APPLICATIONS

OCTOBER 2, 1978.

The following are notices of filing of applications for temporary authority under section 210a(a) of the Interstate Commerce Act provided for under the provisions of 49 CFR 1131.3. These rules provide that an original and six (6) copies of protests to an application may be filed with the field official named in the FEDERAL REGISTER publication no later than the 15th calendar day after the date the notice of the filing of the application is published in the FEDERAL REGISTER. One copy of the protest must be served on the applicant, or its authorized representative, if any, and the protestant must certify that such service has been made. The protest must identify the operating authority upon which it is predicated, specifying the "MC" docket and "Sub" number and quoting the particular portion of authority upon which it relies. Also, the protestant shall specify the service it can and will provide and the amount and type of equipment it will make available for use in connection with the service contemplated by the TA application. The weight accorded a protest shall be governed by the completeness and pertinence of the protestant's information.

Except as otherwise specifically noted, each applicant states that there will be no significant effect on the quality of the human environment resulting from approval of its application.

A copy of the application is on file, and can be examined at the Office of the Secretary, Interstate Commerce Commission, Washington, D.C., and also in the ICC Field Office to which protests are to be transmitted.

MOTOR CARRIERS OF PROPERTY

MC 13569 (Sub.-41TA), filed August 10, 1978. Applicant: THE LAKE SHORE MOTOR FREIGHT CO., INC., 1200 South State Street, Girard, OH 44420. Representative: John P. Tynan, P.O. Box 1409, 167 Fairfield

V 4 3 / 2 0 2 0 C 1 8 7 8

Road, Fairfield, NJ 07006. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Fencing or poultry netting; fence gates, posts and fixtures; Wire, steel plain or barbed and materials and supplies* used in the manufacture thereof, between the plantsites of Robertson, Inc., located at: (1) Batavia, OH, and (2) Mount Sterling, OH, on the one hand, and on the other, points in the Chicago, IL Commercial Zone and points in the southern peninsula of MI, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Robertson, Inc., 700 Kent Road, Batavia OH 45103. Send protests to: Interstate Commerce Commission 731 Federal Building, 1240 East Ninth Street, Cleveland, OH 44199.

MC 22509 (Sub.-7TA), filed August 10, 1978. Applicant: MISSOURI NEBRASKA EXPRESS, INC., 5310 St. Joseph Avenue, St. Joseph, MO 64505. Representative: E. Wayne Farmer, 900 Walnut Street, 3d Floor, Kansas City, MO 64106. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Metal containers and container ends*, from Milwaukee, WI and its commercial zone, to Norfolk, NE; Omaha, NE, and Kansas City KS, and their commercial zones, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: National Can Corp., 8101 West Higgins Road, Chicago, IL 60631. Send protests to: Vernon V. Coble, District Supervisor, Interstate Commerce Commission, 600 Federal Building, 911 Walnut Street, Kansas City, MO 64106.

MC 51146 (Sub-618TA), filed July 27, 1978. Applicant: SCHNEIDER TRANSPORT, INC., 2661 South Broadway, P.O. Box 2298, Green Bay, WI 54306. Representative: John R. Patterson, 2480 E. Commercial Blvd., Ft. Lauderdale, FL 33308. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Cellulose insulation* from Dallas, TX to points in AR, LA, MS, and OK, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Diversified Insulation, P.O. Box 188, Hamel, MN 55340 (Walter Carpenter). Send protests to: Gail Daugherty, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, U.S. Federal Building and Courthouse, 517 E. Wisconsin Ave., Room 619, Milwaukee, WI 53202.

MC 55896 (Sub-87TA), filed July 27, 1978. Applicant: R-W SERVICE SYSTEM, INC. (Michigan Corp.), 20225 Goddard Road, Taylor, MI 48180. Representative: George E. Batty, 20226 Goddard Road, Taylor, MI 48180. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Leatherboard, blue chrome splits, partially tanned and having a moisture content of not less than 30 percent*, from the plantsites of Whitehall Leather Co., Whitehall, MI, and Eagle Ottawa Leather Co., Grand Haven, MI, to Milwaukee, WI, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 day of operating authority. Supporting shipper: Eagle Ottawa Leather Co., 200 N. Beech Tree, Grand Haven, MI 49417 (Gerald McMaster, Traffic Manager). Whitehall Leather Co., 900 S. Lake St., Whitehall, MI 49461 (Kenneth Wackernagel, Purchasing Agent). Send protests to: Timothy S. Quinn, District Supervisor, Interstate Commerce Commission, Bureau of Operations, 604 Federal Building and U.S. Courthouse, 231 West Lafayette Blvd., Detroit, MI 48226.

MC 56082 (Sub-74TA), filed July 27, 1978. Applicant: DAVIS & RANDALL, INC., (NY CORP.), c/o White Inn Suite, 50 Main Street, Fredonia, NY 14063. Representative: Katherine Furness (same as above). Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Such merchandise as is dealt in by wholesome, retail and chain grocery and feed business houses, in containers being cereals, soft moist pet food and feed, animal*, from Dunkirk, NY to points in OH (Akron, Ashtabula, Canton, Cleveland, Maple Heights, Warrensville, Solon, Bedford, Brooklyn Valley View, Dennison, Massilon, Youngstown) and Pittsburgh and New Castle, PA, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Ralston Purina, 3800 Middle Road, Dunkirk, NY 14048. Send protests to: Interstate Commerce Commission, Bureau of Operations, 910 Federal Building, 111 West Huron Street, Buffalo, NY 14202.

MC 69492 (Sub-66TA), filed August 10, 1978. Applicant: HENRY EDWARDS, d.b.a. HENRY EDWARDS TRUCKING CO., P.O. Box 97, Clinton, KY 42031. Representative: Mr. Roland M. Lowel, 618 United American Bank Building, Nashville, TN 37219. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *General commodities*, except those of unusual value, *Class A and B explosives, and household goods as defined by the Commission*, between Hickman, KY and its commercial zone, on the one hand, and, on the other, points in AR, IL, KY, MO, and TN. Restricted to traffic having a prior or subsequent movement by water for 180 days. Supporting shipper: Hickman-Fulton County Riverport, Riverport Office, P.O. Box 6, Hickman, KY 42050. Send protests to: Mr. Floyd A. Johnson, District Supervisor, Interstate Commerce Commission, 100 North Main Building—Suite 2006, 100 North Main Street, Memphis, TN 38103.

MC 82492 (Sub-202TA), filed July 27, 1978., Applicant: MICHIGAN & NEBRASKA TRANSIT CO., INC. (a Michigan Corp.) 2109 Olmstead Road, P.O. Box 23853, Kalamazoo, MI 49003. Representative: William C. Harris (same as above). Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Foodstuffs* from the facilities of Little Crow Foods at or near Warsaw, IN, to points in KY, TN, Scott City and Sikeston, MO, and points in their commercial zones, and those points in AR in the Memphis, TN, commercial zone, restricted to the transportation of traffic originating at the facilities of Little Crow Foods, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting Shipper: Little Crow Foods, Warsaw, IN 46580. Send protests to: C. R. Flemming, District Supervisor, Bureau of Operations, Interstate Commerce Commission, 225 Federal Building, Lansing, MI 48933.

MC 94265 (Sub-278TA), filed August 4, 1978. Applicant: BONNEY MOTOR EXPRESS, INC., P.O. Box 305, Route 460, Windsor, VA 23487. Representative: John J. Capo, Suite 212, 5299 Roswell Road NE., Atlanta, GA 30342. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Meats, meat products and meat byproducts, and articles distributed by meat packinghouses* as described in sections A and C of Appendix I to the report in Descriptions in Motor Carrier Certificates, 61 M.C.C. 209 and 766, except hides and commodities in bulk in tank vehicles, from the plantsite and storage facilities utilized by Peter Eckrich & Sons, Inc., in Allen Township, Hillsdale County, MI, to points in AL, GA, NC, SC, and TN. Restricted to the transportation of traffic originating at the above named origin facilities, for 180 days. Supporting shipper: Peter Eckrich & Sons, Inc., 455 Squires Road, Quincy, MI 49082. Send protest to: Paul D. Collins, District Supervisor, Interstate Commerce Commission, 10-502 Federal Building, 400 North Eighth Street, Richmond, VA 23240.

MC 107960 (SUB-6TA), filed August 10, 1978. Applicant: SUMMERFORD TRUCK LINE, INC., P.O. Box 487, Ashford, AL 36312. Representative: Robert J. Corber, 1747 Pennsylvania Avenue NW., Washington, DC 20006. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Fertilizer batch plants, parts, components and supplies* used in the manufacture and setting up to such plants, from Ashford, AL, and Dalias, TX, to points in AL, AR, GA, FL, LA, MS, TN, and TX, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Ferguson South, Inc., P.O. Box 387, Ashford, AL 36312. Send protests to: Mabel E. Holston, Transportation Assistant, Bureau of Operations, ICC, room 1616, 2121 building, Birmingham, AL 35203.

MC 108119 (Sub-92TA), filed July 27, 1978. Applicant: E. L. MURPHY TRUCKING CO., P.O. Box 43010, St. Paul, MN 55164. Representative: Andrew R. Clark, 1000 First National Bank Building, Minneapolis, MN 55402. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Precut buildings, knocked down, and parts, attachments, materials and supplies* when moving with precut buildings from Fletcher, NC, to points in the U.S. that are in and east of the States of MI, WI, IL, MO, KS, OK, and TX, for 180 days. Supporting shipper: Carolina Log Buildings, Inc., Howard Gap Road, P.O. Box 368, Fletcher, NC 28732. Send protests to: Delores A. Poe, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, 414 Federal Building & U.S. Post Office, 110 South Fourth Street, Minneapolis, MN 55401.

MC 110191 (Sub-30TA), filed July 27, 1978. Applicant: TURNER'S EXPRESS, INC. (a Virginia corporation), 1300 Shelton Avenue, P.O. Box 1006, Norfolk, VA 23502. Representative: D. L. Turner (same as above). Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Glass containers*, from the facilities of Midland Glass Co., Inc., at or near Cliffwood, NJ, to Williamsburg, VA, and its commercial zone, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Midland Glass Co., Inc., Cliffwood, NJ 07721. Send protests to: Paul D. Collins, District Supervisor, Bureau of Operations, room 10-502, Federal Building, 400 North Eighth Street, Richmond, VA 23240.

MC 110988 (Sub-371TA), filed July 27, 1978. Applicant; SCHNEIDER TANK LINES, INC. (a Wisconsin corporation), 4321 West College Avenue (Giltedge Building), Appleton, WI 54911. Representative: John R. Patterson, 2480 East Commercial Boulevard, Fort Lauderdale, FL 33308. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: *Soybean meal and soybean hulls*, in bulk, in hopper trucks, from the facilities of Cargill, Inc., at or near Chicago, IL to IL, IN, MI, and WI, for 180 days. Supporting shipper: Cargill, Inc., 122 and Torrence Avenue, Chicago, Il 60617 (Thomas J. Fourniea). Send protests to: Gail Daugherty, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, U.S. Federal Building and Courthouse, 517 East Wiconsin Avenue, Room 619, Milwaukee, WI 53202.

MC 113784 (Sub-69TA), filed July 27, 1978. Applicant: LAIDLAW TRANSPORT LTD, 65 Guise Street, Hamilton, On L8L 4M1. Representative: Douglas R. Gowland (same as above). Authority sought to operate as a *common Carrier*, by motor vehicle, over irregular routes, transporting: *Scrap iron and metal in dump type vehicles*, between ports of entry on the U.S.-Canadian boundary line, located on the Detroit and St. Clair Rivers and points in MI, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: I. WAXMAN & SONS LTD., P.O. Box 3460, Station C, Hamilton, On. Send protests to: Interstate Commerce Commission, Bureau of Operations, 910 Federal building, 111 West Huron Street, Buffalo, NY 14202.

MC 114052 (Sub-2TA), filed July 27, 1978. Applicant: CATENCAMP TRANSFER & STORAGE, INC. (A Wisconsin Corporation), 218 East Richmond Street, Shawano, WI 54166. Representative: William C. Dineen, 710 North Plankinton Avenue. Milwaukee, WI 53203. Authority sought to operate as a *contract carrier*, by motor vehicle, over irregular routes, transporting: (1) *Paper and paper products*, from the facilities of Shawano Paper Mills, Inc., at or near Shawano, WI, to Clinton, Des Plaines, Chicago, Addison and Fox River Grove, Il; Indianapolis and Mooresville, IN; Kalamazoo, Livonia, Detroit and Sparta, MI; Minneapolis and St. Paul, MN: St. Louis, MO; and Massilon, Cincinnati, Mt. Vernon, Cleveland, and Belpre, OH; and (2) *waste, scrap paper and pallets*, from points in (1) above, to the facilities of Shawano Paper Mills, Inc. at or near Shawano, WI, under continuing contract(s) with Shawano Paper Mills, Inc., for 180 days. Supporting shipper: Shawano Paper Mills, Inc. (R. B. Olson, vice president), P.O. Box 3629, Green Bay, WI 54303. Send protests to: Gail A. Daugherty, Transportation Assistant, Interstate Commerce Commission, Bureau of Operations, 619 U.S. Courthouse and Federal Building, 517 East Wisconsin Avenue, Milwaukee, WI 53202.

MC 114552 (Sub-176TA), filed August 10, 1978. Applicant: SENN TRUCKING CO., P.O. Drawer 220, Newberry, SC 29108. Representative: Virgil H. Smith, Suite 12, 1587 Phoenix Boulevard, Atlanta, GA 30349. Authority sought to operate as a *common carrier*, by motor vehicle, over irregular routes, transporting: (1) *Roofing and building materials, and materials used in the installation of such commodities* (except commodities in bulk) from the facilities of Tamko Asphalt Products, Inc., at Tuscaloosa, AL to points in AL, FL, GA, IL, KY, IN, OH, NC, SC, TN, VA, and WV. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Interstate Dairy Sales, Inc., Box 538, Salem, SD 57058, Donald Tjaden. Send protests to: J. L. Hammond, District Supervisor, Interstate Commerce Commission, Bureau of Operations, Rm. 455 Federal Building, Pierre, SD 57501.

MC 145091TA, filed August 7, 1978. Applicant: YOUNG CONTRACT CARRIER, INC. (a Colorado corporation), P.O. Box 954, 109 Road, Alamosa, CO 81101. Representative: Richard P. Kissinger, 50 South Steele, Suite 330, Denver, CO 80209. Authority sought to operate as a *contract carrier,* by motor vehicle, over irregular routes, transporting: (1) *Lumber,* (a) from points in CO to points in KS, OK, TX, and NM. (b) From points in NM to points in CO, KS, OK, and TX.

(c) From points in WY to points in CO, KS, OK, TX, and NM. (2) *Wood pallets,* from Alamosa County, CO, to points in Bernalillo County, NM. (3) *Building materials,* (a) from Lincoln, Carter and Caddo Counties, OK, to points in CO. (b) From Bernalillo county, NM to points in CO. (4) *Reinforcing bars,* from Border Steel Rolling Mills at or near El Paso, TX, to points CO. Note: The operations authorized above are to be conducted under a continuing contract or contracts with Young Wholesale Lumber & Supply, Inc., under a continuing contract or contracts with Young Wholesale Lumber & Supply, Inc., for 180 days. Supporting shipper: Young Wholesale Lumber & Supply, Inc., P.O. Box 954, 8609 south 109 Road, Alamosa, CO 81101. Send protest to: H. C. Ruoff, District Supervisor, Interstate Commerce Commission, 492 U.S. Customs House, 721 19th Street, Denver, CO 80202.

MC 145100 (Sub-1TA), filed August 7, 1978. Applicant: ALBERT J. AND JIM L. WHITAKER d.b.a. WHITAKER'S WRECKER SERVICE, 816 NW., 6th Street, Oklahoma City, OK 73106. Representative: David A. Cherry, 223 Ciudad Building, Oklahoma City, OK 73112. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Wrecked and disabled trucks, tractors, and trailers, and replacements therefor,* between Oklahoma City, OK on the one hand, and, on the other, points in AL, AZ, AR, CO, GA, IL, IA, KS, KY, MN, MS, MO, NM, OK, TN, and TX, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Lee Way Motor Freight, Inc., 3401 NW., 63rd, Oklahoma City, OK 73116, Market Pre-Pak, 401 N. Vicki, Oklahoma City, OK 73117, Mistletoe Express Service, P.O. Box 25125, Oklahoma City, OK 73125. Send protests to: Connie Stanley, Transportation Assistant, Rm 240 Old Post Office & Court House Building, 215 NW., 3rd, Oklahoma City, OK 73102.

MC 145144 (Sub-1TA), filed August 7, 1978. Applicant: WALL TRUCKING, INC., 22 School Street, Shrewsbury, MA 01545. Representative: John F. O'Donnell, 60 Adams Street, Milton, MA 02187. Authority sought to operate as a *contract carrier,* by motor vehicle, over irregular routes, transporting: *Waste neutralized acid sludge and waste metal sludge* (except in tank vehicles) from Grafton and Worcester, MA to Waterbury, CT and Lewiston, NY, under a continuing contract or contracts with Wyman-Gordon Company, for 180 days. Supporting shipper: Wyman-Gordon company, 224 Worcester Street, N. Grafton, MA 01536. Send protests to: Paul A. Roberts, District Supervisor, Interstate Commerce Commission, 150 Causeway Street, Boston, MA 02114.

MC 145152 (Sub-1TA), filed August 7, 1978. Applicant: BIG THREE TRANSPORTATION, INC., P.O. Box 706, Springdale, AR 72764. Representative: Don Garrison, 324 North Second Street, Rogers, AR 72756. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Chemicals NOI, esters* (fatty acid of animal oils NOI), *esters* (fatty acid of vegetable oils NOI), *fatty alcohol NOI, inedible fatty alcohol, coconut oil, softeners textile NOI, cleaning and washing compounds NOI* (liquid), *lubricating oils NOI* (other than petroleum), *lubricating oils* (petroleum), *wax NOI and fireproofing compounds,* (except in bulk), from Mauldin, SC; Lock Haven, PA; Linden, NJ; and Santa Fe Springs, CA to points in the United States (except AK and HI), for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Emery Industries, Inc., P.O. Box 628, Mauldin, SC 29662. Send protests to: District Supervisor William H. Land, Jr., 3108 Federal Office Building, 700 West Capitol, Little Rock, AR 72201.

MC 145153 (Sub-1TA), filed August 7, 1978. Applicant: DOUBLE DECKER BUS CO., P.O. Box 5390, Baltimore, MD 21209. Representative: Henry E. Seaton, 425 13th Street, NW., Washington, DC 20004. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: *Passengers and their baggage,* in round trip special and charter operations, restricted to English Style Double Decker Buses, beginning and ending in Baltimore, MD and its commercial zone and extending to Atlantic City, NJ, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: There are approximately 35 statements of support attached to the application which may be examined at the Interstate Commerce Commission in Washington, DC, or copies thereof which may be examined at the filed office named below. Send protests to: William L. Hughes, District Supervisor, Interstate Commerce Commission, 1025 Federal Building, Baltimore, MD 21201.

MC 145181TA, filed August 7, 1978. Applicant: JESS GINGERY, 530 7th Street, Box 147, Berthoud, CO 80513. Representative: Charles J. Kimball., 350 Capitol Life Center, 1600 Sherman Street, Denver, CO 80203. Authority sought to operate as a *common carrier,* by motor vehicle, over irregular routes, transporting: (1) *Building materials, wood products, and trusses,* except in bulk; (2) *materials, equipment and supplies* used in the manufacture, distribution, and installation of the above commodities, except in bulk, from the facilities of Rigid Component Systems at or near Longmont, CO, to points in WY and Fall River County, SD, under a continuing contract with Rigid Component Systems, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: Rigid Component Systems, 15 3rd Avenue, Longmont, CO 80501. Send protests to: D/S Roger L. Buchanan, Interstate Commerce Commission, 721 19th Street, 492 U.S. Customs House, Denver, CO 80202.

MC 145205TA, filed August 7, 1978. Applicant: RECO TRANSPORTATION, INC., Route 1, Box 274, Black Mountain, NC 28711. Representative: George W. Clapp, P.O. Box 836, Taylors, SC 29687. Authority sought to operate as a *contract carrier,* by motor vehicle, over irregular routes, transporting: *Synthetic fibers and synthetic yarns* from Enka and High Shoals, NC, Clemson, SC and Chattanooga and Lowland, TN to Dos Palos, Los Angeles, Merced and Porterville, CA and points in their commercial zones, under a continuing contract or contracts with American Enka Company, for 180 days. Applicant has also filed an underlying ETA seeking up to 90 days of operating authority. Supporting shipper: American Enka Co., Enka, NC 28728. Send protests to: District Supervisor Terrell Price, 800 Briar Creek Road, Room CC516, Mart Office Building, Charlotte, NC 28205.

MC 145520TA, filed August 7, 1978. Applicant: THOMAS MICHAEL HAWK, d.b.a. T & J PRODUCE, Route 9, Box 253, Shelby, NC 28150. Representative: William P. Farthing, Jr., 1100 Cameron-Brown Building, Charlotte, NC 28204. Authority sought to operate as a *contract carrier,* by motor vehicle, over irregular routes, transporting: *Wood chipping machines* (wood chipping machines pulverize tree trunks, limbs and branches into small wood chips) from Shelby, NC to points within all states west of the Mississippi River, under a continuing contract or contracts with The Wood/Chuck Chipper Corp., for 180 days. Supporting shipper: The Wood/Chuck Chipper Corp., Drawer 400, Shelby, NC 28150. Send protest to: District Supervisor Terrell Price, 800 Briar Creek Rd., Rm. CC516, Mart Office Building, Charlotte, NC 28205.

By the Commission.

H. G. Homme, Jr.,
Acting Secretary.

1

EQUAL EMPLOYMENT OPPORTUNITY COMMISSION.

TIME AND DATE: 9:30 a.m. (eastern time), Tuesday, October 17, 1978.

PLACE: Commission Conference Room, No. 5240, on the fifth floor of the Columbia Plaza Office Building, 2401 E Street NW., Washington, D.C. 20506.

STATUS: Part will be open to the public and part will be closed to the public.

MATTERS TO BE CONSIDERED:

Open to the public:

1. Adjustment of filing deadlines for employment surveys EEO-2, 2e and 3 for calendar years 1977 and 1978, and revision of performance dates for processing contract for these surveys.

2. Proposed contract for processing 1978 State and local government employment survey, EEO-4.

3. Report on Commission operations by the Executive Director.

Closed to the public.

Litigation Authorization; General Counsel Recommendations: Matters closed to the public under the Commission's regulations at 29 CFR 1612.13.

NOTE.—Any matter not discussed or concluded may be carried over to a later meeting.

CONTACT PERSON FOR MORE INFORMATION:

Marie D. Wilson, Executive Officer, Executive Secretariat, at 202-634-6748.

This notice issued October 10, 1978.

2

FEDERAL DEPOSIT INSURANCE CORPORATION.

NOTICE OF CHANGE IN SUBJECT MATTER OF AGENCY MEETING

Pursuant to the provisions of subsection (e)(2) of the "Government in the Sunshine Act" (5 U.S.C. 552b(e)(2)), notice is hereby given that at its closed meetings held at 10:30 a.m. on October 12, 1978, the Corporation's Board of Directors voted, on motion of Acting Chairman John G. Heimann, seconded by Director William M. Isaac (Appointive), to withdraw from consideration an application of the Estes Park Bank, Estes Park, Colo., for consent to relocate its main office from 101 West Elkhorn Avenue to 363 East Elkhorn Avenue, both locations within Estes Park, Colo. The Board further determined, by the same majority vote, that no earlier notice of the change in the subject matter of the meeting was practicable.

FEDERAL DEPOSIT INSURANCE CORPORATION,
ALAN R. MILLER,
Executive Secretary.

3

NUCLEAR REGULATORY COMMISSION.

TIME AND DATE: Thursday, October 12, 1978, and Thursday, October 19, 1978.

PLACE: Commissioners' Conference Room, 1717 H Street NW., Washington, D.C.

STATUS: Open and closed.

MATTERS TO BE CONSIDERED:

THURSDAY, OCTOBER 12; 2 P.M.

1. Discussion and vote on issues remaining for Commission consideration in the Midland proceeding, (approximately ½ hour, closed—exemption 10), postponed from October 10, 1978.

2. Discussion of EDO testimony of July-August, 1977 (approximately 1½ hours, closed—exemption 6), postponed from October 10, 1978.

THURSDAY, OCTOBER 19; 9:30 A.M.

1. Report by NRC Women's Committee (approximately 1 hour, public meeting).

2. Affirmation items (approximately 10 minutes, public meeting): (a) Fuel cycle rulemaking, (b) OIA inquiry in St. Lucie, and (c) waiver or reduction of fees under the FOIA (tentative).

3. Discussion of personnel matter (approximately 1 hour, closed—exemption 6, tentative).

CONTACT PERSON FOR MORE INFORMATION:

Walter Magee, 202-634-1410.

ROGER M. TWEED,
Office of the Secretary.

PESTICIDE PROGRAMS

Initiation of Schedule for Review of Wood Preservative Pesticides

The U.S. Environmental Protection Agency (EPA) has published today elsewhere in this part of the FEDERAL REGISTER, notices of rebuttable presumption against registration (RPAR) on inorganic arsenic, pentachlorophenol, and coal tar, creosote, and coal tar neutral oil. These chemicals comprise the most widely used industrial pesticide wood treatments available. Therefore, the wood treatment uses of these pesticides will be considered together in the risk-benefit part of the RPAR review process. In addition to providing data and information on each of the compounds RPAR'd, persons are invited to comment on the comparative risks and benefits of these three chemicals. This will assist the Agency in assessing tradeoffs. Other uses for these pesticides will be considered in individual risk/benefit analyses for each chemical. Please refer to the separate RPAR notices for information on submission of comments, rebuttals, and benefits data.

A tentative schedule has been established for completion of the RPAR review of the wood-treatment uses of inorganic arsenic, pentachlorophenol, coal tar and its derivatives:

Mid-January 1979—deadline for submission of rebuttals and comments (based on EPA's expectation that a 60-day extension to the comment period will be requested).

Second quarter, 1979—submission of benefits/exposure comments by USDA Benefit Assessment Team.

Third quarter, 1979—complete rebuttal review (if the rebuttals are successful for any of these chemicals, that chemical will be referred for registration or reregistration; if the rebuttals are not successful, EPA will continue its regulatory review).

First quarter, 1980—USDA/SAP review of EPA's proposed regulatory options.

Second quarter, 1980—Final regulatory decision on the wood-treatment uses of inorganic arsenic, pentachlorphenol, coal tar and its derivatives, as appropriate.

Dated: October 6, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

PESTICIDE PROGRAMS

Notice of Rebuttable Presumption Against Registration and Continued Registration of Pesticide Products Containing Coal Tar, Creosote, and Coal Tar Neutral Oil

AGENCY: Office of Pesticide Programs, Environmental Protection Agency (EPA)

ACTION: Notice of rebuttable presumption.

SUMMARY: Coal tar, creosote, and coal tar neutral oil have been found to exceed certain risk criteria set forth in 40 CFR 162.11. This notice requests registrants and other interested persons to submit rebuttals and other information on the presumption and to submit any other data on the risks and benefits of these pesticide chemicals. This notice is the first of several which will give public notification of the Agency's progress in reviewing this chemical. Today EPA is also publishing in the FEDERAL REGISTER notices of rebuttable presumption against registration (RPAR) on pentachlorophenol (PCP) and inorganic arsenicals. Since coal tar, creosote, and coal tar neutral oil, PCP, and inorganic arsenic comprise the most widely used of pesticide wood treatments available, the wood treatment uses of these pesticides will be considered together in the risk/benefit part of the RPAR review process. Other uses for these pesticides will be considered in individual risk/benefit analysis for each chemical.

DATE: Rebuttal evidence and other information must be received on or before December 4, 1978.

ADDRESS MATERIAL TO: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Herman J. Gibb, Special Pesticide Review Division, Office of Pesticide Programs (TS-791), Office of Toxic Subtances, Room 447, East Tower, EPA, 202-755-5632.

SUPPLEMENTARY INFORMATION: The Deputy Assistant Administrator, Office of Pesticide programs, EPA, has determined that a rebuttable presumption exists against registration and continued registration of all pesticide products containing coal tar, creosote, and coal tar neutral oil.[1] Issuance of this RPAR means that potential adverse effects associated with the use of coal tar, creosote, and coal tar neutral oil have been identified and will be examined further to determine if they do exist and, if so, whether they are unreasonable. This process involves a public review of both the risks and the benefits associated with the use of these pesticide chemicals. The RPAR does not mean that the Agency has decided to cancel or suspend the registration of these chemicals or to take any other action with respect to them; EPA has not made a finding that use of any products containing these ingredients present an imminent hazard. Any pesticide subject to this RPAR may lawfully be sold, distributed, and used for all uses for which it is registered and labeled.

[1] A position document, containing an appendix of references, background information, and other material pertinent to the issuance of this notice, has been prepared by the Agency on coal tar and coal tar products and is also published with this notice.

I. REGULATORY PROVISIONS

A. *General.* Title 40, part 162.11 of the Code of Federal Regulations for the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (86 Stat. 973, 89 Stat. 751, 7 U.S.C. 136 et seq.), provides that a rebuttable presumption against registration shall arise if the Agency determines that a pesticide meets or exceeds any of the risk criteria relating to acute and chronic toxic effects set forth in section 162.11(a)(3). If it is determined that such a rebuttable presumption has arisen, the regulations require that the registrant be notified by certified mail and afforded an opportunity to submit evidence in rebuttal of the presumption. In addition, the Agency has determined that the public should also be given notice of the bases for the presumption to provide an opportunity for comment and to solicit additional information relevant to the presumption.

A notice of rebuttable presumption against registration is issued when the evidence related to risk meets the criteria set forth in section 162.11(a)(3). It is emphasized that a notice of rebuttable presumption against registration and continued registration of a pesticide is not a notice of intent to cancel the registration of a pesticide, and may or may not lead to cancellation. The notice of intent to cancel is issued only after the risks and benefits of a pesticide are carefully considered, and it is determined that the pesticide may generally cause unreasonable adverse effects to the environment.

All registrants and applicants for registration are invited pursuant to 40 CFR 162.11(a)(4) to submit evidence in rebuttal of the presumptions listed in part II of this notice and, in the case of oncogenicity, to submit information which relates to the assessment of oncogenic risks as set forth in the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogens (May 25, 1976; 41 FR 21402). Registrants and other interested parties may submit for consideration data on benefits which they believe would justify registration or continued registration. In addition, any registrant may petition the Agency to voluntarily cancel a current registration pursuant to section 6(a)(1) of FIFRA.

B. *Rebuttal criteria.* Section 162.11(a)(4) provides that a registrant may rebut the presumption by sustaining the burden of proving:

(1) In the case of a pesticide presumed against pursuant to the acute toxicity or lack of emergency treatment criteria, "that when considered with the formulation, packaging, method of use, and proposed restrictions on the directions for use and widespread and commonly recognized practices of use, the anticipated exposure to an applicator or user and to local, regional, or national populations of nontarget organisms is not likely to result in any significant acute adverse effects" (40 CFR 162.11(a)(4)(i));

(2) In the case of a pesticide presumed against pursuant to the chronic toxicity criteria, "that when considered with proposed restrictions on use and widespread and commonly recognized practices of use, the pesticide will not concentrate, persist or accrue to levels in man or the environment likely to result in any significant chronic adverse effects" (40 CFR 162.11(a)(4)(ii)); or

(3) In either case, that "the determination by the Agency that the pesticide meets or exceeds any of the criteria for risk was in error" (40 CFR 162.11(a)(4)(iii)).

C. *Benefits information.* In addition to submitting evidence to rebut the presumption of risk, section 162.11(a)(5)(iii) provides that a registrant "may submit evidence as to whether the economic, social, and environmental benefits of the use of the pesticide subject to the presumption outweigh the risk of use." If the risk presumptions are not rebutted the benefit evidence[2] submitted by the registrant, applicants, and other interested persons will be considered by the Administrator in determining the appropriate regulatory action. Specifically, section 162.11(a)(5)(iii) provides that if the benefits appear to outweigh the risks, the Administrator may issue a notice of intent to hold a hearing purusant to section 6(b)(2) of FIFRA to determine whether the registration(s) should be canceled or application(s) denied. Alternatively, if the "benefits do not appear to outweigh the risks, the Administrator shall issue a notice pursuant to section 3(c)(6) or section 6(b)(1) of the Act, as appropriate." Moreover, if at any time the Administrator determines that a pesticide poses an "imminent hazard" to humans or the environment, a notice of suspension may be issued pursuant to section 6(c) of the Act.

[2] Registrants or other interested persons who desire to submit benefits information should consider submitting information on the following subjects, along with any other relevant information they desire to submit:

1. Identification of the major uses of the pesticide, including estimated quantities used by crop or other application.
2. Identification of the minor uses of the pesticide, including estimated quantities used by category such as lawn and garden uses and household uses.
3. Identification of registered alternative products for the uses set forth in (1) and (2) above, including an estimate of their availability.
4. Determination of the change in costs to the user of providing equivalent pesticide treatment with any available substitute products.
5. Assessment of regulation impact upon user productivity (e.g., yield per acre and/or total output) from using available substitute pesticides or from using no other pesticides.
6. If the impacts upon either user costs or productivity are significant, a qualitative assessment of the regulation's impact on production of major agricultural commodities and retail food prices of such commodities.

II. PRESUMPTIONS

Registrations and applications for registration of pesticide products containing coal tar, creosote, and coal tar neutral oil meet or exceed the 40 CFR 162.11(a)(3) risk criteria relating to oncogenicity. Registrations and applications for registration of pesticide products containing creosote or coal tar-creosote mixtures meet or exceed the 40 CFR 162.11(a)(3) risk criteria relating to mutagenicity. The Agency's basis for concluding that these risk criteria have been met or exceeded is set out in "Coal Tar, Creosote, and Coal Tar Neutral Oil: Position Document 1," which follows. Copies of attachments to the Position Document which are not published with this notice are available for public inspection in the Special Pesticide Review Division. Information protected from disclosure pursuant to FIFRA Section 10 cannot be provided. Specific inquiries concerning the Position Document, as well as requests for access to these files, should be directed to Project Manager Herman J. Gibb, Special Pesticide Review Division (TS-791), EPA, Room 447, East Tower, 401 M Street SW., Washington, D.C. 20460, 202-755-5632.

A. *Oncogenicity.* 40 CFR Section 162.11(a)(3)(ii)(A) provides that a rebuttable presumption shall arise if a pesticide "(i)nduces oncogenic effects in experimental mammalian species or in man as a result of oral, inhalation, or dermal exposure * * *."

On the basis of scientific studies and information summarized in the Position Document, the Agency has concluded that all registrations and applications for registration of pesticide products containing coal tar, creosote, or coal tar neutral oil exceed this risk criterion, and that a rebuttable presumption against new or continued registration of such products has arisen.

B. *Mutagenicity.* 40 CFR Section 162.11(a)(3)(ii)(A) provides that a rebuttable presumption shall arise if a pesticide "* * * induces mutagenic effects, as determined by multitest evidence."

On the basis of scientific studies and information summarized in the Position Document, the Agency has concluded that all registrations and applications for registration of pesticide products containing creosote or coal tar-creosote mixtures exceed this risk criterion, and that a rebuttable presumption against new or continued registration of such products has arisen.

III. ADDITIONAL GROUNDS FOR REVIEW

As discussed in detail in the attached Position Document, some data has associated creosote with human skin and eye irritation, livestock fatality, and fetotoxicity in test animals. The data and analyses available at this time with respect to this effect are not sufficient to warrant the issuance of a rebuttable presumption. The Agency specifically solicits further evidence bearing on these possible adverse effects. All comments and information received with respect to the potential adverse effects, including analysis thereof, may serve as a basis for a final decision on registering pesticides containing creosote.

REBUTTAL SUBMISSION PROCEDURES

All registrants and applicants for registration listed below are being notified by certified mail of the rebuttable presumption existing against registration and continued registration of their products.

The registrants and applicants for registration shall have 45 days from the date this notice is sent or until December 4, 1978, to submit evidence in rebuttal of the presumption. However, the Administrator may, for good cause shown, grant an additional 60 days during which such evidence may be submitted. Notice of such an extension, if granted, will appear in the FEDERAL REGISTER.

A registrant or applicant for registration may, if it desires, assert a business confidentiality claim covering part or all of the information submitted in rebuttal. The registrant or applicant may assert the claim by placing on or attaching to the information a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as

V 4 3 \ 2 0 2

"trade secret," "proprietary," or "company confidential." Allegedly confidential portions of otherwise nonconfidential documents should be clearly marked.

If a confidentiality claim is asserted, the information covered by the claim will be disclosed by EPA only to the extent and by means of the procedures set forth in 40 CFR Part 2, Subpart B (41 FR 36906; Sept. 1, 1976). If no confidentiality claim accompanies the information at the time it is received by EPA, EPA will place the information in the public comment file where it will be available for public inspection.

If a registrant or applicant does assert a confidentiality claim for some, but not all, of the information submitted to EPA in rebuttal, the registrant or applicant should furnish two copies of the information to EPA. The first copy should contain all of the information submitted in rebuttal with information claimed as confidential clearly identified. The second copy should be identical to the first except that all information claimed as confidential should be deleted. The second copy will be placed in the public comment file. The first copy will be treated in accordance with the procedures set out above.

V. Duty To Submit Information on Adverse Effects

Registrants are required by law to submit to EPA any additional information regarding any adverse effects on man or the environment which comes to a registrant's attention at any time, pursuant to section 6(a)(2) of FIFRA and 40 CFR 162.8(d). If any registrant of products containing coal tar, creosote, or coal tar neutral oil has any published or unpublished information, studies, reports, analyses, or reanalyses regarding any adverse effects in animal species or humans, residues, and claimed or verified accidents to humans, domestic animals, or wildlife, which have not been previously submitted to EPA, the material must be submitted immediately. When responding to this notice, each registrant shall submit a written certification to the Agency that all information regarding any adverse effects known to the registrant has been submitted. In addition, the registrants should notify EPA of any studies currently in progress, including the purpose of the study, the protocol, the approximate completion date, and a summary of all results observed to date.

VI. Public Comments and Inspection

During the time allowed for submission of rebuttual evidence, specific comments on the presumptions set forth in this notice and on the material contained in the Position Document are solicited from the public. In particular, any documented episodes of adverse effects to humans, domestic animals, or wildlife, and information as to any laboratory studies in progress or completed are requested to be submitted to EPA as soon as possible. Specifically, information on the fate and effects of coal tar, creosote, or coal tar neutral oil, its impurities metabolites, and degradation products on flora and fauna, particularly animals with metabolism similar to man, is solicited. Similarly, any studies or comments on the benefits from the use of coal tar, cresoste, or coal tar neutral oil are requested to be submitted. All comments and information received, as well as any other relevant information and analysis thereof, which come to the attention of the Agency may serve as a basis for final determination pursuant to section 162.11(a)(5).

All comments and information should be sent to the Office of Federal Register Section at the address given above, if possible in triplicate to facilitate the work of the Agency and others interested in inspecting them. The comments and information should bear the identifying notation "OPP-30000/28." Comments received after the specified time period will be considered only to the extent feasible, consistent with the time limits imposed by 40 CFR Section 162.11(a)(5)(ii).

All written comments and information filed pursuant to this notice will be available for public inspection in the Office of the Federal Register Section from 8:30 a.m. to 4 p.m., during normal working days. Interested persons are encouraged to take advantage of the opportunity to inspect Agency files during normal working hours since: (1) All of the information received may serve as a basis for final determination pursuant to section 162.11(a)(5), and (2) the Agency will not generally publish a summary of information received in the FEDERAL REGISTER at the close of the rebuttal period.

Your cooperation is solicited in identifying any errors or omissions which may have been made in the following computer listings. Corrections to the listings may not necessarily be published in the FEDERAL REGISTER, but rather handled by mail with affected parties. Ommissions will be corrected by notice in the FEDERAL REGISTER.

Dated: September 30, 1978.

EDWIN L. JOHNSON,
Deputy Assistant Administrator for Pesticide Programs.

COAL TAR, CREOSOTE, AND COAL TAR NEUTRAL OIL

POSITION DOCUMENT 1

Coal Tar and Coal Tar Products Working Group
Herman Gibb, Project Manager
U.S. Environmental Protection Agency

I. Background

A. Chemical and Physical Characteristics

Coal tar is produced by the carbonization, also called coking, of coal. Creosote and neutral oils are products of coal tar. Although creosote and neutral oil may be distilled from sources other than coal, the terms "creosote" and neutral oil" in this document will refer to distillates of coal tar. Coal tar is described in the Condensed Chemical Dictionary (Hawley, 1977) as:

> A black, viscous liquid (or semi-solid), naphthalene-like odor; sharp burning taste; obtained by the destructive distillation of bituminous coal, as in coke ovens; 1 ton of coal yields 8.5 gallons of coal tar. Combustible. Specific gravity 1.1a-1.25 (60/60°F). Soluble in ether, benzene, carbon disulfide, chloroform; partially soluble in alcohol, acetone, methanol, and benzene; only slightly soluble in water.

Although it has other uses, the term creosote usually refers to that coal tar distillate which is used for wood preservation. Definitions of creosote vary, however.[1/]

1/ As a wood preservative, creosote is defined by the American Wood Preservers' Association (1976) as:

> A distillate derived from coal tar, as used in the wood preserving industry, creosote denotes a distillate of coal tar produced by the high temperature carbonization of bituminous coal. Creosote consists principally of liquid and solid aromatic hydrocarbons and contains coal tar acids and tar bases; it is heavier than water and has a continuous boiling range beginning at about 200°C.

(continued on page 2)

1/ (continued from page 1)

The Condensed Chemical Dictionary (Hawley, 1977) defines cresosote as:

> A yellowish to dark brown, oily liquid; clear at 38°C or higher; naphthalenic odor; frequently contains substantial amounts of naphthalene and anthracene; distilling range 200-400°C; flash point 165°F (closed cup); soluble in alcohol, benzene, and toluene; immiscible with water. Combustible.

Von Rumker et al. (1975) defined creosote as a distillate of coal tar distilling in the temperature range 271-362°C, heavy creosote as distilling in the range of 285-395°C, and light creosote as distilling in the range of 238-291°C. Ross (1948) identified creosote oil as a distillate of coal tar distilling in the temperature range of 230-270°C.

(2)

exist, though many are present only in trace amounts (NIOSH, 1977). Because the composition of coal tar and coal tar products is known to vary, they are usually assayed and specified by their physical characteristics (including water content, specific gravity impurities, and fractional distillation curve). Using these physical characteristics, specifications for creosote used to pressure-treat wood have been established by the American Wood Preservers' Association, the American Society for Testing and Materials, and the United States General Services Administration (Appendix A). The American Wood Preservers' Association has also established specifications for creosote-coal tar solutions (Appendix B). About 98% of the creosote used for wood preservation in the United States is applied by pressure-treating methods (American Wood Preserver's Institute, 1977). Pressure-treating forces creosote to penetrate deeply into the wood.

B. Registered Uses, Production, and Supply

1. Uses

The largest pesticidal coal tar and creosote use is as a wood preservative. Coal tar is also used as an insect repellent, an acaricide, and a crow repellent. Creosote's other pesticidal uses are as an herbicide, an insecticide, an acaricide, an arachnicide, a fungicide, a tree dressing, a disinfectant, and a horse repellent. Coal tar neutral oil is registered as a disinfectant, a larvicide, an insecticide, a wood preservative, an arachnicide, an acaricide, and a fungicide. Specific uses and sites are given in Table 1.

2. Production and Supply

Von Rumker et al. (1975) reported that in 1972, 1,150 million

TABLE 1

USES AND SITES FOR COAL TAR, CREOSOTE, AND COAL TAR NEUTRAL OIL (Continued, 1977)

Product	Use	Site
Coal Tar	Preservative	Wood
	Insect Repellent	Human Skin (Except Forehead)
	Acaricide	Dogs
	Crow Repellent	Seed Corn
Creosote	Preservative	Wood
	Insecticide (screwworm)	Horses and Mules
	Acaricide (mites)	Poultry Houses
	Arachnicide (ticks)	Poultry Houses
	Herbicide	Along Roads, Highways, and Fences; Lawns; Flower Beds
	Fungicide	Rope, Canvas, Tarpaulins, Tree Wounds
	Tree Dressing	Certain Insects, Worms, Moths and Borers
	Horse Repellent	Wood Stalls, Mangers, Gates, Fence Rails, Posts, Trees, Trailer Sides
	Disinfectant	Outhouses, Water Closets, Garbage Cans, Feeding and Watering Equipment
Coal Neutral Oil	Preservative	Wood
	Arachnicide (ticks)	Hog Houses; Sheep Barns; Dog Kennels; Horse Stables; Dogs.

TABLE 1
(continued)

USES AND SITES FOR COAL TAR, CREOSOTE, AND COAL TAR NEUTRAL OIL

Product	Use	Site
Coal Neutral Oil	Larvicide (mosquito)	Marshy Land; Stagnant Pools and Small Streams; Sewers; Drains; Small Non-fish Bearing Lakes and Ponds; Temporary Rain Pools; Rain Barrels; Clogged Gutters; Intermittently Flooded Areas; Tree Holes; Eaves; Canals and Ditches.
	Insecticide (srewworm)	Horses and Mules.
	Larvicide (gypsymoth)	Gypsy Moth Nests.
	Acaricide (mites)	Horses.
	Larvicide (fly)	Garbage Trucks.
	Insecticide (lice)	Horses; Dogs; Hog Houses; Sheep Barns; Dog Kennels; Horse Stables.
	Insecticide (fleas)	Hog Houses; Sheep Barns; Dog Kennels; Horse Stables; Dogs.
	Disinfectant	Soluble Cutting Oils for Machinery; Hog Houses; Sheep Barns; Dog Kennels; Horse Stables; Yards and Pens; Poultry Feeders; Waterers and Incubators; Boots; Animal Equipment and Utensils; Cellars; Sinks; Bed Pans; Washrooms; Garbage Cans and Pools; Homes; Factories; Offices; Schools; Public Buildings; Water Closets; Urinals; Spittoons; Sickroom Walls; Kitchens; Bathrooms; Lavatories; Woodwork and Floors; Wash Basins; Toilet Bowls and Seats; Livestock Trucks; Cotton Mills; Farrowing Equipment; Poultry and Meat Dressing Plants; Ships; Planes; Railroad Cars; Busses; Sick-room Thermometers; Dishes; Trays and Sputum Cups; Diaper Cans.
	Fungicide (ringworm)	Horses

pounds of creosote were used in the United States, of which 990 million pounds were domestically produced and 160 million pounds were imported. Of its total use, wood preservation accounted for 972 million pounds and fuel burning for about 178 million pounds. Fuller et al. (1977) reported that 96,266,000 gallons of creosote, approximately 843 million pounds, and 23,635,000 gallons of coal tar, approximately 238 million pounds, were used for wood preservation in 1975. Pesticide production data reported to the Environmental Protection Agency under Section 7 of FIFRA indicated that 34,847,384 pounds of coal tar, 366,339,110 pounds of creosote, and 2,019,951 pounds of coal tar neutral oil were formulated or blended for pesticidal use in 1975.

C. Fate in the Physical Environment

Little information is available in the literature regarding the environmental fate of coal tar and coal tar products used for purposes other than as wood preservatives. The following studies indicate that coal tar and creosote migrate to some extent from the treated wood into the surrounding environment. However, the impact of this migration is not known.

Leach and Wellnert (1976) reviewed the literature on the loss of creosote from impregnated wood and found that the loss was dependent on many variables; among these are the kind of coal used to produce the coal tar, the kind of coke oven (temperature, coking time, and gas collection system) from which the coal tar is made, the distillation facilities and operating parameters (feed rate, temperature, and blend of various tar distillate fractions), the treatment and handling by the wood preservers

(seasoning and incising of the wood; temperature, pressure, and time of treatment; and the after-treatment cooling period) and the situations under which the wood is used (surface of wood exposed, orientation of the creosoted wood with reference to the wood grain, and the exposure environment).

1. Vapor Loss

Stasse (1964) found that the creosote vapor loss was greater from seasoned poles than from green poles. Vapor loss is also related to the temperature distillate fractions of the creosote; the higher the temperature of the distillate fractions, the lower the vapor loss. Over a three-year period, low residue (residue, in this study, was defined as the portion of creosote distillate over 355°C) creosote was found to have a vapor loss of 27.5% and 15.2%, from the outer 2 inches of seasoned and green poles, respectively; high residue creosote was found to have a 10.3% and 4.4% vapor loss, respectively.

2. Loss in a Marine Environment

Bramhall and Cooper (1972) found that the creosote concentration in the treated zone of pilings of a 40-year-old wharf averaged 15 pounds per cubic foot (74% of the current minimum) in the outer 1.5 inches. Whether the substandard retention was due to the original treatment or to leaching could not be determined. Sweeney et al. (1958) found that creosote was lost from treated panels when wet due to the swelling of the wood fibers. Panels 5 x 1 1/2 x 1/8 inches were pressure-treated with creosote and exposed to flowing seawater at 25°C. Based on distillation analyses, approximately 30% of the creosote was lost in the first

month of exposure. By the twelfth month, approximately 40% of the creosote was lost. The rapid initial loss was attributed to the initial hydration of the wood fibers resulting in mechanical loss. It would be difficult to determine the loss of creosote from marine pilings based on the loss from small panels. This work, however, does indicate that coal tar-creosote may be lost from marine pilings by mechanical means, if not by true leaching.

Miller (1977) found that the ability of Douglas fir marine piles to retain creosote in cool estuarine waters was directly related to the density of the wood. Of the three piles studied, one had a detectable loss of about 0.31 pounds of creosote per linear foot of immersed pile during the first year, 0.05 pounds/year the second year, 0.06 pounds/year the third year, 0.22 pounds/year the fourth year, and an average of 0.15 pounds/year each year for the last 4 years of the 8-year study. Thus, in the first year a pile with 30 feet of its length in water would lose about 9.3 pounds of creosote, a daily loss of about 11.6 grams. The speed of the water flowing past the pilings was about 2 feet per second during flood tide and about 0.8 feet per second during ebb tide; upstream tide volume between the mean lowest and the mean highest daily tides was 900 million cubic feet of water. Miller concluded that because of the velocity and the volume of the water flowing past the pilings, the creosote lost from the pilings was greatly diluted. Hochman (1967) found that about 20% of the creosote initially impregnated into wood is expelled in the marine environment during the first year as a result of wood hydration. Stasse (1967) found a creosote displacement loss of 21.7% from wood panels

over a 6.5-year period in ocean water.

3. Loss in the Freshwater Environment

Nelso and Behr (1977) found that the greatest loss of creosote from round Southern Pine poles in fresh water occurred in the outer 0.5 inch zone where 48.1% of the creosote was depleted in 13 months. Overall losses for the 13-month period were 19.5%.

D. Fate in the Biological Environment

1. Microbial Degradation

Jean-Raymond and Bartha (1975) isolated six strains of bacteria from oil polluted estuarine water; all six grew on naphthalene, 2-methylnaphthalene, and 2-ethylnaphthalene. Phenanthrene and anthracene were metabolized by three of the six strains. Two of the six strains metabolized 1,5-dimethylnaphthalene and one strain metabolized 1-methylnaphthalene. Naphthalene, 2-methylnaphthalene, 2-ethylnaphthalene, 1-methylnaphthalene, and 1,5-dimethylnaphthalene have all been identified in creosote (National Research Council, 1945) (Lorenz and Ojovik, 1972).

Brisko and O'Neill (1966) found that the mixture of microorganisms present on creosoted pilings in the Port Hueneme, California Harbor had the ability to metabolize creosote, causing loss of creosote from the pilings. Two of the aromatic hydrocarbons present in creosote - naphthalene and phenanthrene - were metabolized to a significant extent. Pseudomonas creosotensis, which was isolated from the mixture of microorganisms, utilized a number of neutral creosote constituents as a source of energy; conversely, acidic and basic creosote constituents inhibited its growth.

Hepner (1977) found that creosote in a soil to sand mixture (1:2)

was decomposed by soil microorganisms. Fertilized soil plots were watered weekly for 22 weeks with the equivalent of one inch of rain per week. Analyses showed that the leachates degraded rapidly when creosote concentrations in the soil were 0.1% or lower. Higher concentrations of creosote can be degraded in the soil but at a much lower rate (Hepner, 1977).

Davies and Evans (1964) studied the metabolism of naphthalene by a Pseudomonas species. The ultimate metabolic products were salicylaldehyde and acetaldehyde.

2. Bioaccumulation

Dunn and Stich (1975) showed that mussels taken from creosoted pilings contained significantly more benzo[a]pyrene (B[a]P), a known carcinogen (IARC, 1976), than those growing on other surfaces. B[a]P has been identified as a constituent of creosote oil (Lijinsky et al., 1963). Mussels taken from the creosoted wood showed mean B[a]P levels of 49 ± 5.8 ug/kg, while mussels taken from the same body of water but remote from the pilings showed mean contamination levels of 2.1 ± 0.3 ug/kg. Samples of creosote-treated wood pilings (outer 4 mm) showed B[a]P levels averaging 570 ppm. Thin-layer chromatograms of piling extracts and of mussels growing on these pilings showed "similar fluorescent band patterns" and may indicate that the creosote migrated from the pilings into the mussels.

Dunn and Stich (1976) also measured the B[a]P content of mussels attached to and near a partially creosoted wharf. Creosoted pilings served as a bumper system around a concrete wharf, and a barricade of creosoted timbers was placed at one end of the wharf. Mussels taken from rocks underneath and near the wharf were contaminated with creosote, rang-

ing from 54 to 76 ug/kg wet tissue weight; while those growing directly on the creosoted barricade were contaminated with 215 ug/kg, and those on rocks 1 meter from the barricade with 171 ug/kg. The authors suggested that the levels of B[a]P in mussels in this area are much higher than those generally found near creosote structures and may reflect the age of the treated timber. The creosote material at the wharf was relatively new and retained a tarry residue on its surface; mussels near older, weathered pilings should have much lower levels of B[a]P.

3. Effect on Freshwater Organisms

White (1975), in a study at a fresh water lake, compared an untreated pile, two pentachlorophenol-treated piles, an ammoniacal copper arsenate-treated pile, and a creosote-treated pile. After one month, the greatest number of algae species was growing on the surface of the creosote-treated pile. After one year all piles, except the one treated with ammoniacal copper arsenate, had extensive algal encrustment, along with many amphipods, limpets, and waterlites entangled in the algal mats. Thus, creosoted piles did not affect the growth of attached freshwater organisms.

I. Regulatory History

Since 1966, various uses were cancelled and eliminated from the labels on coal tar and coal tar products. A summary of the cancelled uses follows:

February 1, 1966 - The U.S. Department of Agriculture (USDA) cancelled the registrations of all products containing creosote used for disinfecting potato bins and other equipment used in potato production.

February 1, 1969 - USDA canceled the registrations of creosote and coal tar neutral oil-coal tar acid combination products used on beef cattle, goats, poultry, sheep, and swine.

February 26, 1970 - USDA canceled the registrations of products containing coal tar neutral oil-coal tar acid combinations used on dairy barns and the registration of products containing creosote used on animal sleeping quarters, barns, hog pens, and sheep folds.

March 12, 1971 - EPA canceled the registrations of coal tar neutral oil-coal tar acid combination products used on poultry houses.

II. Summary of Scientific Evidence Relating to Rebuttable Presumption

A. Oncogenicity

40 CFR Section 162.11(a)(3)(ii)(A) provides that "a rebuttable presumption shall arise if a pesticide's ingredient(s), metabolite(s), or degradation product(s)... induces oncogenic effects in experimental mammalian species or in man as a result of oral, inhalation, or dermal exposure..."

This discussion concerns only reports of the oncogenicity of coal tar, creosote, and coal tar neutral oil. Reports on the oncogenicity of soot, pitch, and petroleum, which have many constituents in common with coal tar, creosote, and coal tar neutral oil will not be discussed here.

In determining that the oncogenicity criterion was exceeded, the Working Group considered case reports of workers who were occupationally exposed to coal tar or creosote and who developed tumors, and reports of animal experiments in which mice, rats, or rabbits developed

tumors from either dermal or inhalation exposure to coal tar, creosote, or coal tar products. In addition, the Working Group considered conclusions by the Carcinogen Assessment Group (CAG) (CAG, 1977; CAG, 1978; McGaughy, 1978) that coal tar, creosote, and coal tar neutral oil are oncogenic.

Also, the Working Group is aware that a number of polycylic and heterocyclic aromatic hydrocarbons present in coal tar creosote and coal tar have been well established as carcinogens [International Agency for Research on Cancer (IARC), 1973; Freudenthal and Jones, 1976; Committee on Biologic Effects of Atmospheric Pollutants, 1972]. Specifically, IARC (1973) reported that the following constituents of coal tar or creosote were carcinogenic to animals by one or more routes of administration: benz[a]anthracene, benzo[b]fluoranthene, benzo[j]fluoranthene, benzo[a]-pyrene, benzo[e]pyrene, chrysense, dibenzo[a,h]anthrancene, dibenzo[a,h]-pyrene, dibenzo[a,i]pyrene, indeno[1,2,3-cd]pyrene, benz[c]acridine, dibenz[a,h]acridine, and dibenz[a,j]acridine.

There may be differences in the chemical composition of the coal tars and coal tar derivatives in pesticide products subject to this presumption and the coal tar substances discussed in this section. If a registrant seeks to rebut the presumption on the ground that identified oncogens are not constituents of a particular pesticide product, the registrant should include relevant data on pesticide composition in the rebuttal submission.

1. Summary Table of Coal Tar, Creosote, and Coal Tar Neutral Oil Studies

Because of the numerous studies and reports on the oncogenicity of coal tar, creosote, and coal tar neutral oil, a summary table has been prepared and precedes the discussions of the studies (Table 2).

TABLE 2

SUMMARY OF COAL TAR, CREOSOTE, AND COAL TAR NEUTRAL OIL STUDIES

COAL TAR

Human Case Reports

Authors	Year	Substance and Type of Exposure	Occupation of Exposed Individual	Type of Tumor Response
Shaugh	1935	Coal Tar on repair needle held between lips	Fishermen - Net loft workers	Epidermal carcinomas of the lower lip
Mauro	1951	Handling of Coal Tar Pitch	Tar distillery workers	Cancer of skin, scrotum, cheek, and lip
Rossmith	1953	Hot Coal Tar Vapors	Tar barrel filler	Spinocellular cancer in scar of cured erythematous lupus infection

COAL TAR

Animal Studies

Dermal Exposure

Authors	Year	Substance Tested	Animal & Strain	Type of Tumor Response
Yamagiwa & Ichikawa	1915	Coal tar	Rabbits (Strain Undefined)	Papillomas of the ear (site of application)
Tsuitsui	1918	Bituminous coal tar	Mice - English	Papillomas, carcinomas and spindle cell sarcoma
Kennaway	1925	Coal tar products of 456°C, 560°C, & 1,250°C distillation temperature.	Mice (Strain Undefined)	Skin tumors (higher rate of carcinogenesis at higher temperatures)

TABLE 2

COAL TAR NEUTRAL OIL

Animal Studies
Dermal Exposure

Authors	Year	Substance Tested	Animal & Strain	Type of Tumor Response
Cabot et al.	1940	Benzene solution of neutral oil & benzo[a]pyrene	Mice - albino "market" mice	Inhibitory effect of tumor response as compared to tumor response with benzo[a]pyrene (effect credited to skin damage)
Berenblum & Schoental	1947	5 Coal tar neutral oil fractions	Mice (Strain Undefined)	All fractions but two were oncogenic
			Rabbits (Strain Undefined)	All fractions but one were oncogenic
Horton	1961	Coal tar neutral oils (maleic anhydride extracts)	Mice (Strain Undefined)	Produced tumors in 34.1 and 32.1 weeks

2. Coal Tar

a. Case Reports of Skin Cancer of Workers

Numerous reports of workers who developed cancer subsequent to coal tar exposure have been reported in the literature. The following is a summary of three of these case studies.

(1) Shambaugh

Shambaugh (1935) described his investigations of the incidence of cancer among fishermen and net loft workers who used and repaired tarred nets. Coal tar was used on nets to prevent them from rotting, and tar was often inadvertently smeared on the arms and face through use of the nets. Shambaugh's interest was prompted by the case of a patient who had sought medical help because of a growth on his neck. The growth was subsequently found to be an epidermal carcinoma involving the lymph nodes and invading the submaxillary gland. Closer examination of the patient additionally revealed a small, puckered scar on the lip, which the patient described as a "fisherman's sore." The patient had been a fisherman for 6 years, and while mending his nets he had held the tar-smeared needle between his lips at the spot where the growth developed. He had smoked a pipe but normally held it on the opposite side of his mouth. This case led Shambaugh to interview fishermen in Boston, Gloucester, New Bedford, and Provincetown, Mass. Using records of cases of cancer of the lip treated at Collis P. Huntington Memorial Hospital in Boston in 1932 and 1933, four fishermen with lip cancer were identified. Each had used tarred nets and at least one held the repair needle in the mouth on the side where the cancer developed. Tobacco was not used by this fisherman, but the other

three smoked pipes. Two of the three cancers developed on the opposite side of the mouth from where the pipe was held.

Among net loft workers, three cancer cases were reported. All held the repair needle in the mouth, and at least one of these workers did not use tobacco. Two had died of lip cancer, while one was treated successfully with radium.

The exposure to tar through net repair needles in the eight cases ranged from 5-60 years. All were epidermoid carcinomas of the lower lip.

(2) Mauro

Workers in a tar distillery were examined by Mauro (1951). Of a crew of 32, 20 had significant exposure to tar (14 day laborers, 4 distillers, and 2 stokers). All except the two stokers had some type of skin disorder; four of these were cancers. A 61-year-old distiller developed cancer of the scrotum after a 30-year exposure. Treatment with surgery and radiation was unsuccessful, and the patient died. A 50-year-old distiller, employed for 25 years, developed cancer of the scrotum and forearm. He was also treated with surgery and radiation, but the outcome was not stated. A 64-year-old day laborer developed cancer of the cheek after a 30-year exposure and was cured with radiation. A 53-year-old day laborer developed lip cancer after 22 years of exposure. He was treated successfully with radiation. The author stated that the workers were exposed to both tar and pitch, and that the two substances produce essentially identical cancers.

(3) Rosmanith

Rosmanith (1953) described the case of a worker who developed

skin cancer in the scar of a cured erythematous lupus infection. The patient had been employed for 10 years filling barrels with tar; while bending over the opening of the barrel, hot tar vapors had come in contact with his face. No protective gear was used other than gloves. The condition began at the root of the nose as several small solid growths which grew and expanded. The tumor was identified as a spinocellular cancer. Radiation treatment was unsuccessful.

b. Animal Studies - Dermal and Inhalation Exposure

The following 15 animal studies are presented chronologically. In general, they show that tumors were produced following dermal and inhalation exposure to coal tar. The working group notes that interpretation of some of the early studies is limited by the absence of control data. However, later studies which include appropriate control groups generally confirm and reinforce the observations in the early studies.

(1) Yanagiwa and Ichikawa

Yanagiwa and Ichikawa (1918) painted tar on the inner and outer surface and in open wounds of rabbits' ears. Seventy-one to 100 days following painting, papillomas were observed in 71% (12 of 17) of pairs of ears that had been painted on the inner surface. Papillomas were seen after 64 days in 17% (1 of 6) of rabbits' ears painted on the outer surface. Eighty-eight percent (7 of 8) of the ears painted on the inner surface had papillomas in rabbits surviving longer than 80 days. Only one papilloma was found in rabbits where the painting had been done on the outer surface or in a cut wound. The authors observed one epider-

papilloma (site unspecified) that had the appearance of a carcinoma, but were unable to examine the tumor histologically. The authors felt that the inner surface of the ear was more susceptible to the development of papillomas than the outer surface of the ear because there were fewer hair follicles. The author did not report using any controls.

(2) Tsutsui Study

Tsutsui (1918) studied the tumor response from bituminous coal tar applied to the skin of "strong" English mice. The tar was applied every third or fourth day. A total of 259 mice in seven groups were used; however, only 67 mice survived for 100 days. Tumors were examined histologically and photographed.

Papillomas developed in 48% (32/67) of the mice that survived 100 days. Later some of the papillomas developed into carcinomas, which invaded adjacent tissue, and were found in 24% (16/67) of the mice. A spindle cell sarcoma was found in one mouse, and lung metastases, confirmed on histological examination, were present in two mice. The author did not report using any controls.

(3) Kennaway

A study of coal tar products of 450 C, 560 C, and 1,250 C distillation temperatures showed a higher rate of carcinogenesis at the higher temperature fractions (Kennaway, 1925). The tars were applied to the interscapular region of 100 mice twice a week. After 230 days, 50% (10/20) had skin tumors in the 1,250 C-tar group, 34% (10/29) had skin tumors in the 560 C-tar group, and 4% (2/49) had skin tumors in the 450 C-tar group. Most tumors were malignant in the 1,250 C and 560 C groups. Nearly half the ani-

mals in the 560°C and 1,250°C groups had died by day 173, and more died as the experiment continued. The author did not report using any controls.

(4) Watson and Mellanby

A study reported by Watson and Mellanby (1930) tested the carcinogenic effect on mice (undefined strain) of the combination of fats in the diet with dermal application of coal tar, of the combination of the dermal application of various fats, oils, or tannic acid prior to the dermal application of coal tar, and of the combination of pretreatment of skin with petroleum ether to remove some of the fatty substances with skin application of coal tar. Four groups of 70 mice were dermally pretreated twice each week with fats (extracted from either normal mouse tissue or from mouse tissue of mice who had died from tar-induced tumors), olive oil, or tannic acid (first applied in the experiment as a 10% solution and later in the experiment as a saturated solution). Coal tar was applied to the skin 30 minutes later. Control groups of the same size were treated only with coal tar. There were no controls in which healthy animals were used for comparison. The animals were treated for 120 days and were observed for a subsequent 240-day period except in the case of the olive oil group which was observed for 20 days subsequent to 90 days of application. Fats were added to the diet by the addition of butter to the food. The mice were fed a diet of one part powdered bread and one part Sussex ground oats made into a moist paste with water. This diet was fed daily and was supplemented once weekly with cod liver oil and marmite. Butter was added in amounts varying from 12.5-25% of the diet of the test mice. A control group consisted of mice to which no butter was

added to the diet but to which coal tar was dermally applied. There were no controls in which healthy animals were used for comparison. This experiment was done twice; once with 70 mice in both the test group and the controls and once with 90 mice in the test group and the controls.

Sixty male mice were treated with petroleum ether to remove at least some of the fatty substances in the skin. The petroleum ether (B.P. 60-80°C) was applied by means of a cotton-wool plug 30 minutes prior to the dermal tar application. This treatment was performed twice weekly for 120 days, and the mice were observed for an additional 330 days. A control group consisted of 60 male mice which were treated dermally with coal tar twice weekly for 120 days and then observed for 330 days. There were no controls in which healthy animals were used for comparison. An analysis of results of all the experiments is found in Table 3.

The application of tannic acid solution to the skin of mice prior to coal tar application did not affect incidence relative to the incidence produced by coal tar alone. The fat extracts or the olive oil, however, increased tumor incidence above the incidence produced by coal tar alone. Fat extracts from normal mice and from mice which had died from tar tumors increased tumor incidence to almost the same extent. Olive oil applied to the skin of mice prior to coal tar application resulted in a 72% lung tumor incidence among the skin tumor-bearing mice compared to 57% for controls (those treated with coal tar alone). The mice treated with fats or oils prior to tar treatment often developed tumors at several locations, which was not true of those treated with

TABLE 3

EFFECTS OF VARIOUS FATS AND OILS APPLIED DERMALLY OR IN THE DIET ON TUMOR INDUCTION BY COAL TAR (Watson and Mellanby, 1930)

Preconditioning	No. Tumors/ No. Animals	Percent of Tumor-Bearing Animals Developing Lung Tumors
I. Skin Treatments		
Experiment 1		
Tannic Acid	19/70 (27%)	47
Mouse Extract (Tumor-Bearing)	35/70 (50%)	63
Mouse Extract (Normal)	41/70 (59%)	59
Tar Only	18/70 (26%)	50
Experiment 2		
Olive Oil	29/70 (41%)	72
Tar Only	21/70 (30%)	57
II. Dietary Treatments		
Experiment 1		
Butter-fed	39/70 (56%)	60
No Butter	20/70 (29%)	37
Experiment 2		
Butter-fed	31/90 (34%)	55
No Butter	37/90 (41%)	41
III. Washing with Petroleum Ether		
Petroleum Ether (Wash)	19/60 (32%)	47
Tar Only	37/60 (62%)	61

tar alone. The addition of butter to the diet of two groups of mice led to a higher incidence of lung nodules in mice with tumors (60% vs. 37% and 55% vs. 41% in the two experiments), as compared to mice treated with tar with no dietary change. Butter-fed mice developed a greasy appearing coat. Mice washed with petroleum ether to remove some natural skin fats developed fewer skin tumors (32% vs. 62%), and fewer of those with skin tumors developed lung nodules than those mice treated with coal tar alone. The author concluded that addition of fats or oils to the skin or to the diet of mice prior to coal tar application caused more tar to be absorbed and thus increased tumor production. This conclusion was also supported by the reduction in tumor formation found when natural skin oil was partially removed by washing with petroleum ether.

(5) Bonser and Manch

Bonser and Manch (1932) studied the tumor response from application to mouse skin of three samples of Scottish blast-furnace tar, one sample of English crude tar, and an ether extract of the latter. The three samples of Scottish tar (I, II, and III) were made from coke-oven charges which contained in addition to the coal, 15-17%, 25%, and 10% coke, respectively; the English crude tar was made from a charge containing 75% coal and 25% coke. Sixty mice were used for testing each sample of tar. There was no control group. The hair was clipped away from a small area of skin in the region between the shoulder-blades. The tar was applied bi-weekly for the first 14 weeks, and thereafter once weekly because of marked ulceration of the skin of many mice. The study was continued for 56 weeks, by which time all the mice had died. Fifty-seven

tumors were grossly identified. Thirty-one of the total 57 tumors which had developed were confirmed histologically. Results appear in Table 4.

In mice treated with the three Scottish samples, the first tumors appeared at the 16th week. The Scottish I, II, and III tar samples produced a tumor incidence of 7/60 (12%), 10/60 (17%), and 8/60 (13%) respectively. The tumors were malignant in three mice. The first tumor appeared at the 21st week when an English crude tar was used. Eight mice (13%) treated with the English crude tar and 24 mice (40%) treated with an ether extract of the English crude tar developed tumors. Nine tumors in mice given the ether extract were malignant. At 30 weeks there were 25 survivors in the latter group of mice, and over 50% had tumors.

The tumors were papillomas or squamous cell carcinomas of the skin. The carcinomas invaded the muscle. One malignant tumor, seen after 47 weeks of application of ether extract of English tar, consisted of a mass of "mononuclear round cells" invading the adjacent muscle and fat and metastasizing to the lymph nodes.

In this study, blast-furnace tar obtained from a variety of sources induced benign and malignant tumors of the skin in mice. The carcinogenic properties were enhanced by extraction with ether.

(6) Gorski

Gorski (1959) investigated the carcinogenic properties of two coal tars (one produced from coal from the "Bobrek" mine and one produced from coal from the "Nowa Huta" mine), a soft pitch, a hard pitch, and an anthracene fraction. Thirty-two mice about 2.4 months old and of approximately equal sex distribution were in each test group. The authors do

See 19.

TABLE 4

INCIDENCE OF SKIN TUMORS IN MICE TREATED WITH BLAST FURNACE TARS
Carcinogen Assessment Group (CAG), 1978

Tar Sample	Number of Tumors per Number of Animals	Appearance of First Tumor (weeks)	Malignant Tumors
Scottish I	7/60 (12%)	16	0/60 (0%)
Scottish II	10/60 (17%)	16	2/60 (3%)
Scottish III	8/60 (13%)	16	1/60 (2%)
English Crude	8/60 (13%)	21	0/60 (0%)
Ether Extract of English Crude	24/60 (40%)	12	9/60 (15%)

not report using a control group. The mice were described as having a "low threshold for spontaneous growths." One drop of the test solution was applied to the skin near the backbone of the mice twice a week for 5 months, for a total of 44 applications per mouse. No data were provided on controls.

The test solutions were prepared by dissolving the materials in benzene (a 1:1 ratio). Pitch, being insoluble in benzene, was extracted using Soxhlet's apparatus, which provided a 1:5 solution in benzene.

Skin changes observed included peeling, swelling, and wart-like growths of differing shapes and sizes. Skin effects appeared earliest and with greatest intensity in the soft pitch group. Tumor results are reported in Table 5.

After 8 weeks, some mice had died in each group. Skin tumor observations were made at 4 months. Tar from the "Bobrek" mice produced an average of 0.6 tumors per mouse in 22 mice; 6 had malignant tumors. Eight of 26 surviving mice in the Nowa Huta mine tar group had malignancies, and there were, on the average, 0.2 tumors per animal. Twenty-one mice survived in the hard pitch group, with an average of one tumor per mouse; eight had malignant tumors. In the soft pitch group, 28 mice survived, with an average of 2.9 tumors each; 14 mice had malignant tumors. Of those to which an anthracene fraction was applied, 24 mice survived with an average of 0.3 tumors each; 4 mice had malignancies.

Mice with skin changes in all groups were debilitated and died by the end of the seven-month experiment. White hard growths ranging in size from that of a pinhead to that of a peppercorn were found by

TABLE 5

TUMOR PRODUCTION IN MICE DERMALLY EXPOSED TO "KOWA HUTA" COAL TAR, "BOBREK" COAL TAR, HARD PITCH, SOFT PITCH OR AN ANTHRACENE FRACTION
(Adapted from Gorski, 1959)

Product Tested	No. of Mice At Onset of Experiment	No. of Mice After Eight Weeks	Average No. of Tumors/Mouse (after 4 months)	No. of Malignant Tumors Proven Histologically 1/
Bobrek Tar	30	22	0.6	6/22 (27%)
Nowa Huta Tar	30	26	0.2	8/26 (31%)
Hard Pitch	30	21	1.0	8/21 (38%)
Soft Pitch	30	28	2.9	14/28 (50%)
Anthracene Fraction	30	24	0.3	4/24 (17%)

1/ The denominator is the number of mice in that group alive after eight weeks.

dissection of the skin tumors, particularly in the later stages of the experiments. Other changes included enlarged lymph nodes, growths in the lungs, flaccidity of the liver, pale hard growths on the kidneys, and degeneration of the liver and kidneys. Metastases to the lymph nodes were confirmed in mice from the soft and hard pitch groups.

The author concluded that all the products tested were carcinogenic, that soft pitch was the most carcinogenic, anthracene fraction the least carcinogenic, and the two tars and the hard pitch were in an "intermediate" group.

(7) Hueper and Payne

Hueper and Payne (1960) found that skin tumors were produced in mice following the application of coal tar. Coal tar, four petroleum road asphalts (Venezuelan, Mississippian, Oklahoman, and Californian), one petroleum roofing tar, and paraffin oil were applied to the napes of the necks of groups of 50 black C57 mice (25 of each sex) for two years. An untreated control group consisted of 200 mice. So that the materials could be applied as droplets, the coal tar and roofing asphalt were heated to make them liquid, and the road asphalts were diluted with a sufficient amount of acetone. The paraffin oil was painted on the skin. Postmortem examinations were performed on all mice, and histological examinations were made of all tissues which exhibited gross abnormalities. The results are found in Table 6.

Carcinomas of the skin were found in 22 of 50 (44%) and papillomas in one of 50 (2%) mice receiving dermal applications of coal tar, whereas control mice did not develop tumors of the skin.

TABLE 6

SKIN TUMORS IN MICE GIVEN DERMAL APPLICATIONS OF COAL TAR, PETROLEUM ROOFING TAR, PARRAFIN OIL, OR PETROLEUM ROAD ASPHALTS
Carcinogen Assessment Group (CAG), 1978

Treatment	Skin Carcinomas	Skin Papillomas	Total
Control	0/200 (0%)	0/200 (0%)	0/200 (0%)
Coal Tar	22/50 (44%)	1/50 (2%)	23/50 (46%)
Petroleum Roofing Tar	1/50 (2%)	0/50 (0%)	1/50 (2%)
Paraffin Oil	1/50 (2%)	1/50 (2%)	2/50 (4%)
Petroleum Road Asphalt			
Venezuelan	0/50 (0%)	0/50 (0%)	0/50 (0%)
Mississippian	1/50 (2%)	1/50 (2%)	2/50 (4%)
Oklahoman	0/50 (0%)	1/50 (2%)	1/50 (2%)
Californian	1/50 (2%)	0/50 (0%)	1/50 (2%)

Hueper and Payne also administered some of the substances via inhalation and intramuscular injection. Coal tar did not produce lung tumors in rats or guinea pigs inhaling such fumes for periods up to two years but did produce muscle sarcomas following intramuscular injection. The results of the intramuscular study are not discussed here because intramuscular injection is not a route of exposure included in the criteria of 40 CFR 162.11(a)(3)(ii)(A).

(8) Horton

In several experiments Horton (1961) tested a number of crude coal tars, coal tar distillates, and fractions of coal tar for skin tumor response in C3H mice. In the first part of the study, five coal tars (four from the coking of bituminous coal and one from the coking of lignite coal), a mixture of one of the bituminous coal tars in 50% benzene, and a benzo(a)pyrene mixture were tested. The authors did not report using a control group. No data were provided on the number of mice tested nor on the length of time the animals were treated; however, the time-to-tumor for each group was reported. The incidence of tumors was reported to be greater than 75% (only a percentage was reported) for each test group. Horton developed a numerical index designed to grade the various tars and tar fractions for relative carcinogenic potency. This index was referred to as the potency for a minimum concentration of material (PMC). A high PMC value is meant to indicate a greater carcinogenic potency. For tars D-1 and D-613 for which multiple doses were applied, a dose response was evident. The mean time-to-tumor (in weeks), the schedule of application, and the PMC values for each of the tars, the tar solu-

TABLE 7

MEAN TIME-TO-TUMOR AND PMC VALUES FOR FOUR BITUMINOUS TARS, ONE LIGNITE TAR, AND ONE SOLUTION OF BENZO[a]PYRENE
(Adapted from Horton, 1961)

Treatment	Schedule of Application (#/week - mg)	Mean Time-to-Tumor (weeks)	PMC
D-1 - bituminous tar	2-10	15.6*	0.27*
	2-50	12.6*	0.37*
	3-100	7.0*	0.63*
D-4 - bituminous tar	2-10	24.8	0.13
D-5 - bituminous tar	2-10	23.6	0.14
D-5A - 50% dilution by weight of D-5 tar	2-10	25.1	0.13
D-8 - bituminous tar	3-50	21.9	0.11
D-12 - lignite tar	3-50	17.1	0.16
D-613 - benzo(a)pyrene in 85% beta-methylnapthalene and 15% benzene solution	2-15	33.0*	0.08*
	2-50	30.6*	0.10*

* The multiple doses for Tars D-1 and D-613 demonstrated a mean time-to-tumor and a PMC dose responses.

tion, and the benzo[a]pyrene solution are reported in Table 7.

Two tars from the previous group (D-1 and D-8) were chosen to test the effect of skin washing with a detergent in water 5 or 60 minutes after tar application. Tars D-1 and D-8 had the highest (0.8) and lowest (0.1) benzene-insoluble content, respectively. Washing delayed tumor development, but the final tumor incidence was not significantly changed. The delay was greater in the animals washed 5 minutes after dermal application.

Horton also determined the relationship between the amount of benzo [a]pyrene in distillates of coal tar and the carcinogenic potency of those distillates. Tar D-1, a distillate oil of D-1 (the first 9-13.5% of the distillation), a proportionate reblend of nine distillate fractions of D-1, and two distillate fractions (a carbolic oil and a light creosote oil) of a coal tar (D-9) not previously used in the experiments were tested for B[a]P content and carcinogenic potency (PMC) to the skin of mice. With the exception of Tar D-1, all test materials were applied to mice (strain unspecified) in 10 mg doses. Tar D-1 was applied in 20 mg doses. The number of applications was described as "repeated," but neither the frequency nor the duration was specified. The PMC values and benzo[a]pyrene content of the test substances are reported in Table 8.

Comparison of the benzo[a]pyrene content with the carcinogenic potencies of various fractions showed that no tumors were produced by those fractions in which no benzo[a]pyrene could be detected, while the carcinogenic potency of the test materials that contained benzo[a]pyrene was correlated with their content by weight of this carcinogen. Despite this observation, the authors did caution that these results do not imply that benzo[a]pyrene is the only carcinogen in these substances.

TABLE 8

PMC VALUES AND BENZO[a]PYRENE CONTENT FOR TWO COAL TARS, SEVERAL DISTILLATES OF THOSE COAL TARS, AND A PROPORTIONATE REBLEND OF THE DISTILLATES FROM ONE OF THE TARS

Test Material	Doses (mg)	Content of Benzo[a]pyrene (%)	Relative Carcinogenic Potency (PMC)
Tar D-1	20	0.74	0.27
Distillate Oil of Tar D-1	10	0.01	0.01
Proportionate Reblend of the Nine Cuts of Tar D-1	10	0.08	0.11
Carbolic Oil of Tar D-9	10	0.00	0.00
Light Creosote Oil of Tar D-9	10	0.00	0.00

(9) Deelman

Deelman (1962) studied the effect of time between tar applications on tumor development. He found that papillomas developed after 16 applications regardless of the interval between applications (2 to 7 days). The number of carcinomas was small after 18 applications. In time, after the end of the applications, however, many of the papillomas became carcinomas.

When tar was applied to different size skin areas or fields, it was found that mice with the largest field (20 x 25 mm) had an average of one carcinoma and seven papillomas each. Eight mice, with a tarred field of 2.5 x 25 mm (The coal-tarred area for the eight mice combined is equal to the largest field tested or 20 x 25 mm field for one mouse.) had a total of 34 papillomas and three carcinomas among them. It was found that among the tar fields tested (20 x 25 mm, 10 x 25 mm and 2.5 x 25 mm), the smaller the tar field, the larger the number of tumors per unit area. This may be a result of the greater toxicity to the animals with the larger tar fields; the author observed that mortality, weight loss, and kidney damage increased as the size of the tar field increased. No untreated controls were used in the study.

(10) Shabad et al.

Shabad et al. (1971) applied three coal tar ointments [Loracorten tar ointment (USA), CIBA coal tar ointment (Switzerland), and coal tar ointment (USSR)] to C57 CBA hybrid mice two or three times each week for 10 or 12 months to test for tumor production. The authors did not report using any control groups. All of the mice died within 18 months or were sacrificed because of their poor condition. Eighteen of 19 (94.7%), 20 of 21 (95.2%), and 16 of 17 (94.1%) of the animals in USSR, CIBA, and Loracorten ointment groups, respectively, developed tumors. The benzo [a]pyrene content of the three ointments was 225, 5,020, and 5,190 ug/g, respectively. Shabad also tested the effect of two birchwood tar ointments, Vishnevsky and Tashkent, on groups of 20 and 24 C57CBA mice. None of the mice in the groups develped tumors after 18 months. The benzo[a] pyrene contents of the Vishnevsky and Tashkent tars were 0.0013 and 0.044 ug/g, respectively.

(11) Horton

Horton (1961) studied the lung tumor response in C3H mice after exposure to coal tar fumes. One group of mice inhaled formaldehyde-contaminated air intermittently for an unspecified amount of time, while a second group was kept in clean air. The former group developed squamous metaplasia as a result of their exposure to formaldehyde. Both groups were then exposed to coal tar fumes (0.33 mg/liter) for one hour/day, three days/week for 13 to 33 weeks. A majority of the mice (numbers were not reported) in both groups developed proliferative alveolar neoplasia, and one (the group was not reported) developed a squamous cell carcinoma. The two groups of mice showed no difference in neoplasia incidence. A third group of mice, exposed intermittently to formaldehyde alone for 64 weeks, showed no alveolar proliferation or carcinoma development.

(12) Horton et al.

Horton et al. (1963) examined C3H mice (a strain that was reported to have a low historical incidence of spontaneous pulmonary adenomas) for lung tumors following inhalation exposure to coal tar aerosol, gaseous for-

maldehyde, or gaseous formaldehyde followed by coal tar aerosol. In the first part of the experiment, groups of 60, 60, and 42 mice were exposed to concentrations of 0.5, 0.10, or 0.20 mg/liter, respectively, of gaseous formaldehyde for three 1-hour periods per week. The control group consisted of 59 untreated mice. After 35 weeks, none of the animals that were sectioned of those that died (118 of 221) during the 35-week period had developed lung tumors. The surviving animals were used to conduct further experiments with coal tar and formaldehyde. The surviving 33 mice from the control group in the first part of the experiment and the surviving 26 mice from the group in the first part of the experiment that had been exposed to 0.10 mg/l of gaseous formaldehyde were exposed to 0.30 mg/l of coal tar aerosol for three 2-hour periods per week for up to 36 weeks. The surviving 36 mice from the group that had been exposed to 0.05 mg/l of formaldehyde in the first part of the experiment were exposed to 0.15 mg/l of formaldehyde for three 1-hour periods each week for up to 35 weeks. There was also an untreated control group [1/] which was observed for 82 weeks.

The test animals were exposed to the test substances until death; the first death occurred 1 to 11 weeks after exposure and the longest time until death was 36 weeks. Serial sections of the trachea, large bronchi, and lung from the exposed animals and from the lungs of 30 unexposed mice were examined (Table 9).

1/ The initial size of the untreated group was not reported. At the termination of the experiment at 82 weeks, the group consisted of 30 mice.

TABLE 9

TUMORS OF THE LUNG IN MICE INHALING FORMALDEHYDE AND/OR AEROSOL OF COAL TAR
Carcinogen Assessment Group (CAG), 1978

Treatment	Squamous Cell Tumors	Adenomas	Total
(-)	0/30 (0%)	0/30 (0%)	0/30 (0%)
Coal Tar	6/33 (18%)	1/33 (3%)	7/33 (21%)
Formaldehyde and Coal Tar	1/26 (4%)	1/26 (4%)	2/26 (8%)
Formaldehyde	0/36 (0%)	0/36 (0%)	0/36 (0%)

Five mice inhaling coal tar aerosol and one mouse inhaling formaldehyde followed by coal tar developed squamous cell tumors in the periphery of the lung, involving 1/3 to 1/2 of the lobe. In two mice from the former group, several lobes were involved. A sixth mouse in the former group that died after 20 weeks of exposure had an invasive squamous cell carcinoma, which was described as "unquestionably a squamous cell carcinoma whereas those occurring in the other five animals probably represented an earlier stage of development at the time of death." One mouse in each group had adenoma of the lung. Tumors of the lung were not observed in mice breathing formaldehyde only or in untreated controls.

There were other changes produced in the tracheobronchial epithelium as the result of the inhalation of coal tar. The most striking was a necrotizing tracheobronchitis in the majority of mice; the incidence was not reported. In addition, squamous cell metaplasia extended into the smaller bronchi. Hyperplasia of the bronchial epithelium occurred frequently, sometimes with papillary infolding. The epithelium of untreated mice was normal showing neither metaplasia nor hyperplasia.

Epithelial changes in mice inhaling formaldehyde involved mostly the trachea; extension into the major bronchi was infrequent and did not occur at all in the smaller bronchi. In general, the inhalation of formaldehyde resulted in an acute tracheobronchitis ranging from slightly to severely necrotizing, or developing into a chronic type with proliferation of fibrous tissue. This was sometimes complicated by bronchopneumonia. In summary, mice inhaling coal tar aerosol developed squamous cell carcinomas of the lung, as well as hyperplastic and metaplastic epithelial changes.

(13) Tye and Stemmer

Tye and Stemmer (1967) separated two different coal tars into phenolic (P-tar) and nonphenolic (N-tar) fractions and exposed mice by inhalation to various blends of the coal tar fractions and to one of the original tars. The same coal tar (T-1) (Specific gravity 1.17, 4.5% tar acid, 0.7% benzo[a]pyrene and 6% Diels-Alder compounds) that was used in the experiments by Horton, Tye, and Stemmer (1963) and a second, somewhat different tar (T-2) (Specific gravity 1.24, 1.4% tar acid, 1.1% benzo[a]pyrene, and 2% Diels-Alder compounds), were the two tars from which the phenolic (P-tar) and nonphenolic (N-tar) fractions were separated.

Fifty male C3H/HeJ mice, three to five months old, were in each test group. The tests groups consisted of untreated, Tar-1, N-Tar-1, N-Tar-1 plus P-Tar-1, N-Tar-1 plus P-Tar-2, and N-Tar-2 plus P-Tar-1. Mice were exposed for two hours every three weeks. During the first eight weeks, the exposure was at a concentration of 0.20 mg/l, but this was reduced to 0.12 mg/l because so many mice died.

Three mice from each group were killed after four weeks, and five mice were killed after 31 weeks. Surviving mice were killed at the end of 55 weeks. Mortality from exposure was high in all groups of treated mice. At the end of the experiment, there were 31/50 (62%), 11/50 (22%), 11/50 (22%), 10/50 (20%), 21/50 (42%), and 21/50 (42%) mice alive in the control, Tar-1, N-Tar-1, N-Tar-1 plus P-Tar-1, N-Tar-1 plus P-Tar-2, and N-Tar-2 plus P-Tar-1 groups, respectively. Tumor response is recorded in Table 10.

The most prominent lesions were intrabronchial adenomas and ade-

TABLE 10

INCIDENCE OF LUNG TUMORS IN MICE INHALING AEROSOLS OF COAL TARS[1]
Carcinogen Assessment Group (CAG), 1978

Treatment	Metaplasia	Adenomas[2]	Adenocarcinomas	Adenomas & Carcinomas

N-Tar-1 + P-Tar-2	7/25 (28%)	14/25 (56%)	1/25 (4%)	15/25 (60%)
N-Tar-2 + P-Tar-1	4/23 (17%)	14/23 (61%)	0/23 (0%)	14/23 (61%)

1/ Mice surviving for 46 weeks or longer.

2/ Includes intrabronchial and alveolar adenomas.

nocarcinomas, occurring anywhere in the bronchial tree. Multiple tumors were frequently seen. The intrabronchial adenomas were papillary. There also were alveloar adenomas which were peripheral. Tumors of the lung were diagnosed as adenocarcinomas only if there was invasion or if metastases were observed.

Adenomas and carcinomas of the lung were observed in 60% to 100% of the mice inhaling aerosols of coal tars, whereas tumors were not seen in any of the control mice. Incidences of squamous metaplasia varied from 10% to 38% in treated mice and were absent in control mice. "Alveolar epithelization" was also observed, but less often than squamous metaplasia. Areas of squamous and alveolar metaplasia were not considered as tumors, even when they occupied relatively large spaces.

(14) Kinkead, McConnell and Specht, and MacEwen and Vernot

MacEwen and Vernot (1972-1974), Kinkead (1973), and McConnell and Specht (1973) reported on a study in which mice, rats, hamsters, and rabbits were exposed to a coal tar aerosol from which the light oil and solid fraction was removed. Gross skin pathology for the mice was reported; any other tumor response in the mice and in the other animals was not reported.[1]

Groups of 64 female yearling and 64 weanling (32 of each sex) Sprague-Dawley rats, 50 male JAX-CAF1 mice, and 50 male ICR-CF1 mice were

1/ Per contractual agreement, Sasmore performed internal and skin histopathology for the study and reported his results (Sasmore, 1976), but because information in the Sasmore report is incomplete, no conclusions can be made about the report.

exposed continuously for 90 days (except for 15 minutes a day to allow for brief maintenance) to concentrations of 0.2, 2.0, and 10.0 mg/m^3 of coal tar aerosol. Eighty-two female yearling Sprague-Dawley rats, 82 weanling Sprague-Dawley rats (73 female and 9 male), 75 male JAX-CAF1 mice, 75 male ICR-CF1 mice, 100 male golden Syrian hamsters, and 24 New Zealand white rabbits were exposed continuously, as above, for the same 90-day period to a concentration of 20 mg/m^3. The control animals consisted of 41 female and 41 male Sprague-Dawley weanling rats, 82 female Sprague-Dawley yearling rats, 75 male JAX-CAF1 mice, 75 male ICR-CF1 mice, 24 female New Zealand white rabbits, and 100 male golden Syrian hamsters (MacEwen and Vernot, 1972). Many of the mice contracted a streptococcus infection and died before 93 days post exposure. Skin tumor response for the mice is found in Table 11.

Tumor responses of 20% (10 of 36), 30% (3 of 8), and 8% (2 of 25) were seen in the three highest dose groups of the ICR-CF1 mice; no tumors (0 of 62) were found in the controls. A tumor response of 37% (10 of 27) was found in the highest dose group in the JAX-CAF1 mice; no tumors (0 of 74) were found in the JAX-CAF1 controls. McConnell and Specht (1973) examined some of the skin tumors histologically and concluded that a whole spectrum of epithelial tumors, from squamous cell papilloma to keratoacanthoma, to "frankly aggressive" appearing squamous cell carcinoma are stimulated by the coal tar aerosol, although the majority of these tumors fall in the squamous cell carcinoma category. McConnell and Specht also found a time-to-tumor dose response for the coal tar aerosol. This dose response is shown in Table 12. As stated above, tumor response was not reported for the rats, hamsters, or rabbits.

TABLE 11

TUMOR RESPONSE IN MALE ICR-CF1 AND JAX-CAF1 MICE FOLLOWING EXPOSURE COAL TAR AEROSOL (Adapted from McConnell and Specht, 1973)

Dose (mg/m^3)	ICR-CF1[1]	JAX-CAF1[1]
20.0	10/36 (28%)[2]	10/27 (37%)[2]
10.0	3/8 (38%)[3]	0/12 (0%)[3]
2.0	2/25 (8%)[3]	0/47 (0%)[3]
0.2	0/2 (0%)[3]	0/47 (0%)[3]
0.0	0/62 (0%)[2]	0/74 (0%)[2]

1/ The numerator is the number of animals with tumors at 415 days post exposure. The denominator is the number of animals that were alive at 93 days post exposure.
2/ This dose group began with 75 animals.
3/ This dose group began with 50 animals.

2	142

(15) Lacwen and Vernot, and Lacwen et al.

Lacwen and Vernot (1975 and 1976) and Lacwen et al. (1976) reported on two studies of the tumor response of mice, rats, rabbits, and monkeys following exposure to coal tar aerosol. In the first study, 90 female Sprague-Dawley yearling rats, 90 Sprague-Dawley weanling rats (45 males and 45 females), 75 JAX-CAF1 male mice, 75 ICR-CF1 male mice, and 100 male golden Syrian hamsters were exposed continuously for 90 days (except for 15 minutes a day to allow for animal maintenance) to concentrations of 0.2, 2.0, and 10.0 mg/m^3 of coal tar aerosol. An equal number of each species were used for controls. The coal tar used to generate the aerosol in this study was:

> a composited mixture collected from multiple coking ovens around the greater Pittsburgh area. The coking ovens were of several different types and used different coal sources for their starting materials. The coke oven effluents were collected in air collection devices using a chilled water spray to condense the higher boiling distillate fractions. After settling and separation of the liquid phase, the various coal tar samples were blended together with a 10% by volume amount of the BTX (benzene; toluene; xylene) fraction of the coke oven distillate.

An aerosol particle size determination in the exposure chambers was performed, and it was found that a minimum of 97% of all droplets were in a respirable range of five microns or less in diameter. Only skin tumor response for the mice was reported (Table 13). Tumor response was not reported for the hamsters or rats.

In the second study 75 female and 100 male ICR-CF1 mice (described as tumor susceptible), 90 female JAX-CAF1 mice (described as tumor resistant hybrid strain), 45 male and 45 female CFL strain Sprague-Dawley weanling rats, 18 New Zealand albino rabbits, and 5 male and 9 female Macaca mulatta monkeys were exposed to 10 mg/m^3 of coal tar aerosol for 6 hours each day, five days per week for 18 months. The coal tar used to generate the aerosols in this study was the same as that of the first study. Aerosol particle size was determined monthly in the exposure chambers. A minimum of 99% of the total droplets in both chambers were 5 microns or less in diameter and were thus within a respirable size range for rodents.

Exposure to the coal tar at 10 mg/m^3 significantly reduced the body weight of rabbits and rats compared with the controls, whereas monkeys showed no significant change in body weight. Sixteen of 18 rabbits and six control mice died during the test period. These deaths were attributed to a chronic respiratory infection which caused debilitation and dehydration. At the conclusion of the exposure period, the test monkeys and the surviving test rabbits along with the unexposed controls were delivered to the NIOSH Laboratories in Cincinnati, Ohio, for long-term post-exposure observation, but the results were not reported in MacEwen et al. (1976). Discussion with MacEwen indicated that while the monkeys are still under observation, the number of surviving rabbits (2 of 18) was too few for statistical comparison, and those animals were sacrificed (Gibb, 1978a). No tumor response was found in the sacrificed rabbits (Gibb, 1978b).

Alveolargenic carcinomas were produced in 26 of 61 (43%) ICR-CF1 mice and in 27 of 50 (54%) JAX-CAF1 mice. The number of tumors in the ICR-CF1 and the JAX-CAF1 control mice were 3 of 68 (4%) and 8 of 48 (17%), respectively. The exposed and control groups did not differ in the incidence of other types of tumors including squamous cell carcinomas, lymphosarcomas, subcutaneous sarcomas, alveolargenic adenomas, bronchiogenic carcinomas, reticulum cell sarcomas, hemangiosarcomas, and hematopoietic tumors.

Skin tumors were produced in 5 of 75 (7%) of the ICR-CF1 mice and 2 of 50 (4%) of the JAX-CAF1 mice as compared to 3 of 75 (3%) and 1 of 50 (2%) in the ICR-CF1 and JAX-CAF1 controls, respectively. The criterion for counting a lesion as a skin tumor was a growth greater than 1 mm in diameter and in height. Each tumor was ultimately confirmed by histologic examination. MacEwen et al. compared the lack of skin tumor response in the second study to the tumor response of the 10 mg/m^3 dose group of the first study. As stated previously, the first study found a skin tumor incidence of 44 of 75 (59%) in the treated ICR-CF1 mice and 18 of 75 (24%) in the treated JAX-CAF1 mice as opposed to only three of 75 (4%) in the ICR-CF1 controls and 1 of 75 (1.3%) in the JAX-CAF1 controls, respectively. A calculation of total exposure time (MacEwen et al., 1976) revealed that the same amount of coal tar aerosol reached the skin of the mice in the second study as in the first study. MacEwen et al. suggested that the 18 months' intermittent exposure of the animals in their study allowed the animals enough time each day to permit normal cleaning of the fur.

The incidence of coal tar tumorigenesis in rats is reported in Table 14.

The incidence of squamous cell carcinomas in the lungs was (36/36) 100% in exposed males and (31/36) 82% in exposed females as opposed to 0 of 36 (0%) in male controls and 0 of 37 (0%) in female controls.

A dose-related tumor response was observed for both the ICR-CF1 and the JAX-CAF1 mice.

TABLE 13

SKIN TUMOR RESPONSE IN ICR-CF1 AND JAX-CAF1 MICE FOLLOWING EXPOSURE TO COAL TAR AEROSOL (MacEwen and Vernot, 1976)

Dose (mg/m^3)	Week of Observation 2/	Cumulative Number of Tumors 1/ ICR-CF1 Exposed	ICR-CF1 Control	JAX-CAF1 Exposed	JAX-CAF1 Control
10	100	44/75 (59%)	3/75 (4%)	18/75 (24%)	1/75 (1%)
2	103	14/75 (19%)	0/75 (0%)	3/75 (4%)	0/75 (0%)
0.2	101	1/75 (1%)	0/75 (0%)	1/75 (1%)	1/75 (1%)

1/ The numerator is the number of animals with tumors; the denominator is the number of animals exposed.

2/ Includes the 90-day exposure period.

TABLE 14

COAL TAR TUMORIGENESIS IN RATS
(MacEwen, 1976)
et al.

	Controls		Exposed	
	Males	Females	Males	Females
Number Examined Histologically[1]	30	37	38	38
Number of Rats with Tumors:				
Squamous Cell Carcinoma, Lung	0	0	38	31
Squaceous Cell Carcinoma	0	1	0	0
Intraabdominal Carcinoma	0	1	0	0
Mammary Fibroadenoma	0	1	0	3
Mammary Adenocarcinoma	0	1	0	0
Other Tumors	0	1	8	2
Overall Tumor Incidence (%)	0	13	100	82

1/ The original number of rats per group was 40. However, because of autolysis and/or cannibalization, a few animals were unsuited for histopathological examinations.

Many aromatic hydrocarbons such as those found in coal tar are known to fluoresce. Hide (skin and hair) tissue samples taken during the exposure period from the ICR-CF1 mice in the second experiment were extracted with toluene and analyzed for fluorescent content. Results are found in Table 15. Hide fluorescence during exposure correlated with the tumor response.

3. Creosote

Reports of workers who developed cancer subsequent to creosote exposure have been reported in the literature. The following is a chronological survey of these reports.

a. Case Reports of Skin Cancer in Workers

(1) Mackenzie

Mackenzie (1896) reported the case of a man employed for 30 years dipping railway ties in liquid creosote in an air-tight chamber. The worker stated that only his arms and hands came into contact with the dripping planks. In several places on his forearms, there were "skin elevations of a warty character about the size of split peas." On the right half of the patient's scrotum were several papillomatous swellings from the size of a pea to that of a nut, rather soft but covered with a horny crust and sore to the touch. The patient had picked several off, leaving a bleeding surface. The author suggested that the tumors were likely to become epitheliomatous.

(2) O'Donovan

O'Donovan (1910) lists three cases of skin cancer of men occupationally exposed to creosote; two of the men creosoted wood, and one pickled wood in creosote. O'Donovan detailed the case of one man who

TABLE 15

SUMMARY OF HIDE FLUORESCENCE ($\mu g/cm^2$) OF ICR-CF1 MICE DURING AND AFTER EXPOSURE TO COAL TAR AEROSOL

Dose (mg/m^3)	Days of Exposure 1	7	30	60	90	30 Days Post-Exposure	ICR-CF1 Mouse Skin Tumors at 100 Weeks
10.0	26.9	34.9	19.2	23.8	21.6	0	44/75 (59%)
2.0	2.4	9.3	7.6	4.4	9.9	0	14/75 (19%)
0.2	0.4	1.6	4.9	1.0	3.8	0	1/75 (1%)

had been creosoting timber for 40 years. Warts had appeared on his hands, legs, and behind his ears seven years prior to reporting his case. The warts had fallen off and left scars behind them. Eighteen months before the case was reported, a wart on the patient's scrotum had fallen off, leaving a small sore which never healed and steadily enlarged. Three months before admission to the hospital, the glands of the left groin enlarged; the patient steadily lost weight and grew weaker. On admission to the hospital, the case was considered inoperable.

(3) Cookson

Cookson (1924) reported on a worker employed for 33 years to carry creosoted wood. At least 15 years before the case was reported, a small swelling appeared on the back of the worker's right hand. The swelling would occasionally break open and then heal again. About 7 years later, the swelling increased substantially in size until the growth had to be removed. A portion was examined histologically prior to being excised and proved to be a squamous epithelioma. Following the patient's death several years later, an autopsy was performed, and small secondary epitheliomatous deposits were found in the liver, both lungs, and in both kidneys. There were also two secondary deposits in the heart walls. One in the left ventricular wall involving its whole thickness was the size of a walnut and was beginning to break down in the interior. The other was the size of a pea at the right border of the right ventricle.

(4) Henry

Henry (1947) reviewed 753 cases of cutaneous epithelioata reported to the British Medical Inspector of Factories from 1920 to 1945

and found 37 cases attributable to creosote exposure. Of these cases 14 occurred among workers treating timber, 9 among people handling creosote in storage, and 10 among people using creosote as a releasing agent for brick molds. One case of epithelioma was reported among workers using creosote for the manufacture of furnace crucibles, and one case among workers manufacturing creosote disinfectants. The author also reports two cases of cutaneous cancer not reported to the British Medical Inspector of Factories: a railway platelayer handling creosoted ties and an assistant chemist testing creosote for 16 months in a tar distillery laboratory.

(3) Lenson

Lenson (1956) described a shipyard worker who had worked with creosote for three years. Malignant cutaneous tumors of the face appeared 5 years after working with the creosote. The worker had been a painter for 41 years and had mixed his own paints, using lead and oils. Turpentine and white gasoline had been used as paint removers.

b. Animal Studies

The following 6 animal studies are presented chronologically. In general they show that tumors were produced following dermal exposure to creosote. As with coal tar, the Working Group notes that the interpretation of some of the early studies is limited by the absence of control data. However, later studies which include appropriate control groups generally confirm and reinforce the observations in the early studies.

(1) Sall and Shear

Sall and Shear (1940) reported on several experiments which tested

the potential of the basic fractions of creosote to accelerate tumor production by known carcinogens. Female Strain A mice obtained from the Roscoe B. Jackson Memorial Laboratory in Bar Harbor, Maine, were used in all the experiments which included administration by skin painting and subcutaneous injection. In the skin painting experiments a mixture of 1% basic creosote and either 0.02% or 0.05% benzo[a]pyrene was applied three times per week to the treated animals. Concentrations of benzo[a]pyrene, at 0.02% and 0.05% were used alone for two control groups; another control group was painted with 1% basic creosote alone. There were no control groups in which healthy animals were used for comparison. The results of the skin painting experiments indicated that the basic fraction of creosote accelerated the tumor formation when applied with either 0.02% or 0.05% benzo[a]pyrene concentration, although the basic creosote alone produced no tumors. The results of the intramuscular experiment are not discussed here because intramuscular injection is not a route of exposure included in the criteria of 40 CFR 162.11(a)(3)(ii)(A).

(2) Woodhouse

Woodhouse (1950) studied the carcinogenic activity of 16 petroleum fractions and extracts, anthracene oil, creosote oil, linseed oil, pine tar, and six spindle oils dermally applied to 50 groups of ten-week-old, albino mice (undefined strain). Each test substance was applied with glass rods to the intrascapular area twice weekly for 25 weeks. Males and females were tested in approximately equal numbers. The animals surviving 25 weeks in each test group were counted, and papillomas and carcinomas were identified. Of the creosote-treated animals, 19 survived 25 weeks; 19 tumors (10

papillomas and 9 carcinomas) were reported. This was the highest number of tumors in the 10 treatment groups tested. There was no control group.

(3) Lijinsky et al.

A study by Lijinsky et al. (1956) evaluated creosote and its basic fracton as possible tumor-promoting agents. The experiment failed to demonstrate that creosote acts as a strong promoter when administered to mice receiving a single painting of 7,12-dimethylbenz[a]anthrancene (DMBA), but it did demonstrate that creosote is independently carcinogenic.

The creosote used was a "#1 oil, dry point 240° C, collected as a distillation fraction from a Wilton still." The basic fraction was prepared by the procedure of Cabot et al. (1940). Treatments were given twice weekly for 70 weeks to four groups of 30 female Swiss mice. A single drop of the treatment solution was applied with a glass dropper to the intrascapular region of the skin, which was kept free of hair by clipping with scissors. A control group (Group 1) consisting of 50 mice was treated with the initiating agent, 7,12-dimethylbenz[a]anthrancene (DMBA) given as a 1% solution in mineral oil. Group 2 was painted with undiluted creosote. The three remaining groups received a single initial painting of 1% DMBA in mineral oil; one week later they were treated with undiluted creosote (Group 3), 10% creosote in acetone (Group 4), or a 2% basic fraction of creosote solution in acetone (Group 5). There were no control groups in which healthy animals were used for comparison.

The tumor incidence in the five groups is shown in Table 16. The survival rate of the control animals given DMBA alone was not given; whatever their number, none of them were reported to have developed tumors.

TABLE 16

SKIN TUMOR INCIDENCE IN MICE TREATED WITH CREOSOTE
Carcinogen Assessment Group (CAG), 1977

Group	Initial Painting	Twice Weekly Painting	Incidence of Tumor-Bearing Mice 1/	Nos. of Papillomas	Nos. of Carcinomas	Average Latent Period (weeks)
1	1% DMBA	None	0/50 (0%)	0	0	0
2	None	Creosote: undiluted	13/26 (50%)	7	16	50
3	1% DMBA	Creosote: undiluted	17/23 (74%)	6	26	39
4	1% DMBA	Creosote 10% in Acetone	11/29 (38%)	7	8	43
5	1% DMBA	Creosote: 2% Basic Fraction	0/12 (0%)	0	0	0

1/ In group 1 there were 50 animals initially. In groups 2, 3, and 4 the denominator is the number of survivors at time of appearance of first tumor. In group 5 there there were 12 survivors at 56 weeks.

In contrast, there was a high tumor rate for animals pre-treated with DMBA and then treated repetitively with either undiluted or 10% creosote. Some enhancement of the action of a single initiating dose of DMBA was noted when given with undiluted creosote (50% vs. 74%), although the difference was not significant. Dilution of the creosote to 10% in acetone diminished the tumor producing action of DMBA plus creosote, while the basic fraction did not prove to be oncogenic.

In a companion study (Lijinsky et al., 1956) the creosote was chemically analyzed for benzo[a]pyrene, but less than 100 mg of benzo[a]pyrene was found per liter of creosote, an amount the authors consider too small to account for the carcinogenic activity of creosote. They suggested that some of the carcinogenic activity may result from the presence of benz[a] anthracene which was found in a relatively large quantity (2.75 gm/liter).

The results of this study showed that undiluted creosote alone produced a carcinogenic effect which was slightly augmented by the initial DMBA treatment. When the creosote was diluted to 10% the promoting action was somewhat diminished in relation to the undiluted creosote. The basic fraction of creosote at a 2% strength was inactive. The authors reported that the carcinogenic potential of the undiluted creosote was comparable to results found with DMBA, a potent carcinogen, in a similar test conducted at the same laboratory.

(4) Poel and Kammer

Poel and Kammer (1957) tested two "creosote oils" for carcinogenic potential on male and female mice. In the introduction to their report, Poel and Kammer described the difference between the definitions of coal

tar fractions as they are classically defined and coal tar fractions as they are industrially used:

> The crude industrial fractions distilled from high-temperature coal tars are designated light oil, middle oil or napthalene crude cut, heavy creosote oil, anthracene oil and pitch (Table 17). A clear cut separation of tar into these distinctive fractions is usually not practiced on an industrial scale. In fact, such terms as creosote, heavy oil, and anthracene oil have been used synonymously, while certain industries to this day designate some pitches as "tars". Most of the marketed oil products are blends or smears, containing both creosote and anthracene oils plus varying amounts of the residual fractions from the middle-oil cut - the fraction shown in Table 17 to have a boiling range of 200 to 250°C.

The two "creosote oils" used in the study were described by Poel and Kammer as follows:

> Both are fractions from a high-temperature horizontal by-product-coke-oven tar. One is a crystal-free oil, marketed as a blend of creosote, anthracene oils, and the oil drained from the naphthalene recovery operation. This blend of oils has been described as non-toxic to humans and is used principally for the preservation of wood.... The second sample, considered a light creosote oil industrially [Table 17] is the residual oil drained from the naphthalene recovery operation.

The blended sample was tested in toluene at two dilution levels, 20% and 80%; the light creosote oil was tested at a 50% dilution in toluene. As a positive control, benzo[a]pyrene was tested in toluene at two dilution levels, 0.05% and 0.25%. Toluene was tested as a negative control.

The test animals were C57L mice, females, 10 to 12 weeks old and males 8 to 11 weeks old. The test solution was applied three times per week on the shaved back of each mouse for its lifespan or until persis-

TABLE 17

CRUDE COAL TAR DISTILLATES (POEL AND KAMMER, 1957)

Industrial Cut	Approximate Distillation Range (°C)	Fraction Recovered From Tar (%)	Principal Components of Fraction
Light Oil	200	5	Benzene, Toluene, Xylene, Solvent Naphtha
Middle Oil	200-250	17	Tar Acids, Tar Bases, Naphthalene, Light Creosote Oil (residue)
Creosote Oil (Heavy)	250-300	7	Methylated Naphthalenes, Acenaphthene
Anthracene Oil	300-350	9	Fluorene, Phenanthrene, Anthracene, Carbazole
Pitch	> 350	62	Pitch Oil, Carbon

tent papillomas developed at the application site. Results of the test are found in Table 18.

These results show a significant increase in tumor incidence after topical treatment with both concentrations of blended creosote as compared to the incidence produced by the toluene control. All mice exposed to both dilutions of the blended creosote oil developed papillomas, and 7 of the 8 in each dilution group developed carcinomas. Among the creosote-treated animals that developed carcinomas, 5 of 14 had metastatic growths in the lungs and/or the regional lymph nodes. The 50% solution of light creosote oil in toluene produced tumors in all 11 male C57L-mice tested, after exposure ranging from 22 to 41 weeks. It was not reported whether the tumors were malignant or not. The presence of benzo[a]pyrene was tested for in light creosote oil and in the anthracene fraction of the blended creosote oil (where it most likely would be found). Detectable levels were not observed, and the authors concluded that the tumor response seen was due, at least in part, to other agents.

In summary, dermal application of light and blended creosote oils from high-temperature-coke-oven-tars induced significant increases in skin tumors on mice. Most of the tumors from the blended oil were carcinomas.

(5) Boutwell and Bosch

In a study which evaluated the tumor initiating and promoting activity of several chemicals, including creosote, and the carcinogenic potential of creosote without the use of initiating or promoting agents, Boutwell and Bosch (1958) found that creosote was carcinogenic when ap-

TABLE 18

TUMOR INDUCTION IN C57L MICE TREATED WITH BLENDED CREOSOTE, LIGHT CREOSOTE, BENZO[a]PYRENE, AND TOLUENE 1/

Test Material	Conc. in Toluene(%)	No. Mice with Tumors	No. Mice with Epidermal Cancer	No. Mice with Metastasis
Creosote Blend	80	8/8 (100%) 2/	7/8 (88%) 3/	3
Creosote Blend	20	8/8 (100%) 2/	7/8 (88%) 3/	2
Light Creosote	50 5/	11/11 (100%) 4/		
Benzo[a]pyrene	0.25	8/8 (100%) 2/	8/8 (100%) 2/	2
Benzo[a]pyrene	0.05	8/9 (89%)	7/9 (78%)	1
Toluene Control	0.0	0/10 (0%)	0/10 (0%)	0

1/ Female C57L mice were used in all groups except light creosote which used males.

2/ Significantly higher than controls ($p = 2.3 \times 10^{-5}$).

3/ Significantly higher than controls ($p = 2.5 \times 10^{-4}$).

4/ Significantly higher than controls ($p = 2.8 \times 10^{-6}$).

5/ The light creosote oil was administered as one drop of 50% (in toluene) creosote oil along with one drop of toluene.

plied to mouse skin, and that it had the ability to initiate tumor formation when applied for a limited period prior to treatment with croton oil. The mice used in the test were 8-week old, random-bred female albino mice.

The creosote was tested at full strength as obtained from Barrett Chemical Company. The trade name of the oil is Carbasota. It is described as "fractions distilled from a high temperature coke-oven-tar in the boiling range of 200 to over 400°C." Croton oil and DMBA used in the study were dissolved in re-distilled benzene. Solutions were protected from exposure to light and evaporation.

The solutions were applied as a 25 ul drop to the shaved skin of the back. Mice were inspected for tumors weekly and papillomas larger than 1 mm in diameter were counted. The gross identification of both benign and malignant tumors was confirmed periodically by microscopic examination.

There were 30 female mice in each group. The group applications were as follows: (Group 1) one drop (25 ul) of undiluted creosote twice-weekly with no initial treatment; (Group 2) one application of 75 ug DMBA followed (one week later) with 25 ul of benzene twice-weekly; (Group 3) single applications of DMBA as in Group 2, followed after one week with twice-weekly applications of 25 ul undiluted creosote; (Group 4) same initial treatment as in Groups 2 and 3 but followed with twice-weekly applications of 25 ul of a 0.5% croton oil in benzene solution; (Group 5) croton oil alone with no pre-treatment; (Group 6) undiluted creosote twice-weekly for four weeks only with no secondary treatment; (Group 7) undiluted creosote twice-weekly for four weeks followed with croton oil

as in Groups 4 and 5. There were no controls in which healthy animals were used for comparison. The length of observation of each group was determined by the carcinogenic response (Table 19).

Papillomas and carcinomas developed in all groups given creosote except Group 6, where the duration of treatment may not have been long enough. Comparison of the results from Groups 6 and 7 show that creosote can act as an initiating agent prior to the application of croton oil. Pre-treatment with DMBA slightly reduces the induction time of tumors produced by repeated continuous creosote administration.

(6) Roe et al.

Roe et al. (1958) found that animals receiving dermal applications of creosote developed tumors of the skin and the lungs. The study consisted of two experiments. Two to three-month old mice were obtained from a commercial breeder for the first experiment. Prior to treating with creosote, the authors observed a total of 768 lung adenomas on the lobe surface of the lungs of 138 mice (an average of 5.8 adenomas per mouse) at 6-8 months of age. Since the commercial breeder had used creosoted wooden boxes to house the animals, it was determined that the lung adenomas were the result of housing the animals in these boxes. Some of these mice were allowed to breed in steel cages in the laboratory. The resulting progeny were found to have an average of only 0.5 adenomas per animal. Two groups of the fourth generation of the original mice were used in the first experiment. One group was bred in stainless steel cages and 24 of the resulting progeny (Group 1) were kept as untreated controls for eight months. Twenty-five progeny (Group 2) were treated twice-weekly

TABLE 19

SCHEDULE OF TREATMENTS AND TUMOR INCIDENCE IN MICE EXPOSED TO DMBA AND CREOSOTE

Group	Initial Treatment	Secondary Treatment (2x/wk)	Period of Treatment and Observation (wks)	Induction Time Carcinomas (wks)	Incidence of Carcinomas (%) 1/
1	None	Creosote	28	26	82 2/
2	75 ug DMBA	Benzene	56		
3	75 ug DMBA	Creosote	28	23	82 2/
4	75 ug DMBA	Croton Oil	54	36	80 3/
5	None	Croton Oil	44		
6	Creosote, 4 weeks, (2x/wk)	None	44		
7	Creosote, 4 weeks, (2x/wk)	Croton Oil	56	44	46 4/

1/ For groups 1,3,4, and 7, only percentages were reported; no carcinoma percentages were reported for Groups 2, 5, or 6.
2/ This incidence was recorded at 28 weeks.
3/ This incidence was recorded at 42 weeks.
4/ This incidence was recorded at 44 weeks.

on the backs with one drop (25 ul) of creosote oil (Carbasota) from the age of three weeks until six months and were observed for two months longer. The Carbasota was produced by the Barrett Chemical Company and was described as "a material in the boiling range of 200°C to over 400°C distilled from a high temperature coke-oven-tar." Progeny from the second group of the fourth generation mice were bred in wooden cages which were "thoroughly impregnated with creosote oil." They produced 29 young (Group 3). Group 3 mice were kept in the cages for the duration of the experiment and were treated for five months with one drop (25 ul) of creosote oil (Carbasota) applied twice-weekly after which they were kept for three months without treatment. After eight months Group 1 had an average of less than 0.5 adenomas per mouse. Group 2 had almost six per mouse and Group 3 almost 11 per mouse (Table 20, Experiment 1). Groups 2 and 3 together totaled 53 mice. Of this number, 5 bore skin tumors but no lung tumors; nine had lung tumors but no skin tumors; and 39 bore both skin and lung tumors. The incidence of skin and lung tumors in the controls was not given; therefore, a statistical analysis of the control versus the experimental groups is not possible. However, the total number of lung adenomas in Groups 2 and 3 was greatly increased over those of the controls (Group 1).

In the second experiment, random-bred albino mice were obtained from a supplier who used only metal cages for breeding. The control group (Group 1) of 50 animals consisted of two groups from a related study (Boutwell and Bosch, 1958), in which one group was treated initially with 75 ug of DMBA followed by a twice-weekly application of 25 ul of a 0.5% solution (w/v) of croton oil in benzene; and the other group

TABLE 20

THE EFFECTS OF CREOSOTE TREATMENT ON THE INCIDENCE OF LUNG ADENOMAS (Carcinogen Assessment Group, 1977)

Experiment	Group	Treatment	No. of Mice	Adenomas on Lung Surfaces	Adenomas per Mouse
1	1	None (control)	19	9	0.5
	2	One drop of creosote 2 times/week for 23 weeks	24	139	5.8
	3	One drop of creosote 2 times/week for 19 weeks in creosoted Cages	29	315	10.8
2	1	Initial treatment with 75 ug of DMBA followed by one drop of croton oil or benzene 2 times/week for approximately 55 weeeks (control)	50	15	0.3
	2	One drop of creosote 2 times/week for 4 weeks.	23	37	1.6

was treated initially with 75 ug of DMBA followed by a twice-weekly application of 25 ul of benzene. No untreated controls were used. The test group of 30 animals (Group 2) was treated twice-weekly for four weeks nine times) with one drop (25 ul) of creosote oil and thereafter kept under observation without further treatment. At 10 months 15 adenomas were seen in the 50 survivors of Group 1. On the other hand, the 23 survivors of Group 2 bore a total of 37 lung tumors (Table 20, Experiment 2). No skin tumors were reported for any of the mice in Experiment 2.

4. Coal Tar Neutral Oil

No human studies were found on coal tar neutral oil. The following three animal studies on coal tar neutral oil are presented chronologically.

(1) Cabot et al.

Cabot et al. (1940) painted albino "market" mice with benzene solutions of various creosote oil fractions together with benzo[a]pyrene. The fractions of creosote were prepared from a creosote oil obtained from a vertical-retort coal tar; 90% of the creosote oil distilled between 160°C and 300°C (Fraction 1). The basic constituents were first removed from creosote with aqueous hydrochloric acid (Fraction II); the phenols were removed with aqueous sodium hydroxide (Fraction III). The remaining neutral material (Fraction IV) was steam distilled, producing "neutral distillate" or neutral oil (Fraction V), and leaving the "neutral residue" (Fraction VI). The six fractions were dissolved in benzene containing either 0.2% or 0.05% benzo[a]pyrene. These solutions were painted on groups of 20 mice three times weekly for 20 weeks. Thereafter, the

solutions containing 0.2% benzo[a]pyrene were applied twice-weekly for six additional weeks. With the solutions containing 0.05% benzo[a]pyrene, the the painting was continued three times per week for an additional 18 weeks. When a papilloma appeared, painting was continued until the skin growth attained an average diameter of about 4 millimeters. Control groups were painted with benzene solutions containing either 0.2% or 0.05% benzo[a] pyrene. No untreated controls were used.

Skin tumors occurred sooner and with greater incidence in animals tested with the high benzpyrene concentration than with the low concentration treatments. Four of the fractions had lower rates of tumor formation than the rates produced by benzo[a]pyrene alone. These four fractions were the parent creosote mixture, the phenolic fraction, the concentrated neutral distillate, and the neutral residue. The authors attributed the inhibitory effect of all but the phenolic fraction to skin damage, but suggested further experiments on the inhibition mechanism of phenolic fractions. Of the two promoting fractions, only the basic fraction had an enhancing effect at both benzo[a]pyrene concentrations.

(2) Berenblum and Schoental

Berenblum and Schoental (1947) extracted a horizontal-retort gas tar[1/] with light petroleum, then removed basic and acidic constituents by shaking with dilute HCl followed by dilute NaOH. The remaining neutral

1/ Although gas tar is made from coal, it is somewhat different from bituminous coking operation coal tar which is used for pesticide production in the United States. The Working Group, however, decided that the physical and chemical characteristics of the two are similar enough to make the results of this study relevant.

fraction was chromatographed and five coal tar neutral oil fractions were separated:

I. All bands up to and including anthracene
II. After anthracene, before benzo[a]pyrene
III. Benzo[a]pyrene bands
IV. Fluorescence bands 391, 412, and 430 mu
V. Fluorescence bands at 385 mu, and residue

The fractions were tested dermally on groups of 10 mice and 5 rabbits, for periods of 17-26 weeks, and were applied once a week on mice and twice a week on rabbits. No untreated controls were used. Fraction II was oncogenic to rabbits (5/5), but not to mice (0/11), Fractions III and IV were oncogenic to both rabbits (5/5 and 4/5, respectively) and mice (7/10 and 3/10, respectively). Fraction V did not produce tumors in mice or rabbits. The results of Fraction I were not reported. None of the crystals obtained from any of the fractions were oncogenic to mice or rabbits, which suggested that the oncogenicity of the fraction remained in the mother liquor.

(3) Horton

As discussed earlier, Horton (1961) evaluated the carcinogenic potential of coal tar and several coal tar fractions including coal tar neutral oil. In separating the coal tar fractions, coal tar acid was extracted with a 9% aqueous solution of sodium hydroxide from filtered benzene solutions of two different coal tars. The raffinates from this sodium hydroxide extraction of the tars were mixed with celite, agitated with concentrated HCl, and then filtered. The tar bases remained on the celite as solid hydrochlorides. The tar fractions from which the acids

and bases had been removed were subjected to repeated contact with maleic anhydride in benzene solution at 60°C to extract the neutral anthracene-type of hydrocarbons (the neutral oils). The adducts formed with maleic anhydride were mixed with powdered soda-lime, and the neutral oil was regenerated by short path distillation at a dull red heat at atmospheric pressure. The remaining residue after extraction of the tar acids, the tar bases, and the neutral oil hydrocarbons was called the residual tar. The tar acids and the tar bases were dissolved in benzene at a concentration equivalent to their concentrations in the original coal tar. The maleic anhydride fraction (the neutral oil) was tested in a 1% solution of benzene. The residual crude tars were tested at 100% concentration; in addition, one of the crude tars was tested at a 50% concentration in benzene.

Ten-mg doses of the two coal tars and the diluted coal tar were dermally applied twice-weekly to mouse skin (the number and strain of mice tested was not stated), and 10-mg doses of the fractions and residual tars were applied three times per week. No untreated controls were used. The time of the tumor appearance was noted, and the relative carcinogenic potency of the different test substances was calculated on the basis of differences in time-to-tumor. This index was referred to as the potency for a minimum concentration of material (PMC). A high PMC value means a greater carcinogenic potency. Skin tumors appeared most quickly from the residual and crude tars: 24.8 and 23.6 weeks and 18.4 and 13.4 weeks from their respective residual tars. No tumors were reported from the acidic fractions of either tar. The basic fractions

of the two tars produced tumors in 48.6 and 40.6 weeks, respectively, and the coal tar neutral oils (maleic anhydride extracts) from the two tars produced tumors in 34.1 and 32.1 weeks. The PMC values indicated that the residual and crude tars were most carcinogenic, with calculated values of 0.14 and 0.22 for the residual tars and 0.13 and 0.14 for the crude tars. PMC values for the coal tar neutral oils were 0.05 and 0.06; the PMC values for the basic fractions were 0.03 and 0.04. Since no tumors were produced by the acidic fractions, PMC values were not calculated.

5. Conclusion

a. Coal Tar

Shambaugh (1935), Mauro (1951), and Rosmanith (1953) reported on fishermen and net loft workers, tar distillery workers, and a tar worker, respectively, who had been occupationally exposed to coal tar and who had developed skin cancer. In animal studies, dermal application of coal tar produced skin tumors with mice [Horton (1961), Shabad et al. (1971), Watson and Mellanby (1930), Tsuitsui (1918), Hueper and Payne (1960), Deelman (1962), Bonser and Manch (1932), Gorski (1959), and Kennaway (1925)], and rabbits [Yamagiwa and Ichikawa (1915)]. Inhalation exposure to coal tarr produced lung tumors in mice [Horton (1961), MacEwen et al. (1976), Horton et al. (1963), and Tye and Stemmer (1967)], and rats [MacEwen et al. (1976)]. Exposure of mice to coal tar aerosol also produced skin tumors (McConnel and Specht, 1973; and MacEwen et al. 1976).

Horton (1961) found a dose response for skin tumors in mice following dermal application of coal tar. McConnell and Specht (1973) and

MacEwen and Vernot (1976) found a dose response for skin tumors in ICR-CF1 mice following inhalation exposure to coal tar aerosol. Horton (1961) and McConnell and Specht (1973) also found that the time-to-tumor was dose-related.

The Working Group concludes that coal tar produced tumors in three species of animals: mice, rats, and rabbits; that tumor response and time-to-tumor in the Horton (1961), McConnell and Specht (1973), and MacEwen and Vernot (1976) studies were dose-related; and that workers occupationally exposed to coal tar developed tumors. The Working Group thus concludes that coal tar is an oncogen and that it exceeds the criteria of 40 CFR 162.11(a)(3)(ii)(A). Accordingly, the Agency is issuing a rebuttable presumption against all pesticides containing coal tar.

b. Creosote

Henry (1947), Lenson (1956), O'Donovan (1920), Cookson (1924), and Mackenzie (1898) described various kinds of workers who were occupationally exposed to creosote and developed skin tumors. Dermal application of creosote produced skin tumors in mice [Woodhouse (1950), Poel and Kammer (1957), Lijinsky et al. (1956), Boutwell and Bosch (1958), and Roe et al. (1958)]. Roe et al. (1958) also found that dermal application of creosote to mice produced lung tumors. Boutwell and Bosch (1958) found that creosote had the ability to initiate tumor formation when applied for a limited period prior to treatment with croton oil. Sall and Shear (1940) found that the number of skin tumors was increased by dermal treatment with creosote and benzo[a]pyrene over the number of tumors produced by benzo[a]pyrene or creosote alone. The Working Group con-

cludes that creosote produces tumors in mice; that creosote, when applied dermally, is a tumor-initiating agent when followed by dermal treatment with croton oil (Boutwell and Bosch, 1958); that creosote accelerates the tumor production caused by benzo[a]pyrene (Sall and Shear, 1940); and that workers occupationally exposed to creosote developed tumors. The Working Group concludes that creosote is an oncogen and exceeds the criteria of 40 CFR 162.11 (a)(3)(ii)(A). Accordingly, the Agency is issuing a rebuttable presumption against all pesticides containing coal tar.

c. Coal Tar Neutral Oil

Horton (1961) found that dermal application of coal tar neutral oil to mice produced skin tumors. Berenblum and Schoenthal (1947) found that several chromatographic fractions of coal tar neutral oil produced skin tumors when dermally applied to mice. Cabot et al. (1940) found that mixtures of coal tar neutral oil with benzo[a]pyrene decreased the number of tumors produced by benzo[a]pyrene alone, but suggested that this inhibiting effect was due to skin damage. The Working Group concludes that coal tar neutral oil produces tumors in mice, and that as an oncogen, it exceeds the criteria of 40 CFR 162.11(a)(3)(ii)(A). Accordingly, the Agency is issuing a rebuttable presumption against all pesticides containing coal tar neutral oil.

B. Mutagenicity

40 CFR 162.11(a)(3)(ii)(A) provides that "a rebuttable presumption shall arise if a pesticide's ingredient(s), metabolite(s), or degradation product(s)... induces mutagenic effects, as determined by multitest evidence."

In determining that this criteria was exceeded, the Working Group considered reports by Simmon and Poole (1978) and Mitchell and Tajiri (1978) who examined a creosote mixture of American Wood Preservers' Association (AWPA) specification P-1 and a coal tar-creosote mixture of AWPA specification P-2, Class C. The AWPA specifications for P-1 and P-2, Class C, are found in Appendices A and B. P-1 creosote is used for foundation piles, fresh-water piles, telephone poles, utility poles, fence posts, and other land and fresh-water uses. Class C P-2 coal tar-creosote is used primarily for railroad ties (Gibb, 1978c). In vitro microbiological assays with four strains of Salmonella typhimurium, TA 1535, TA 1537, TA 98, and TA 100, and Escherichia coli WP2 (Simmon and Poole, 1978) and in vitro mammalian cell bioassays with L5178Y mouse lymphoma cells (Mitchell and Tajiri, 1978) were conducted on both of the coal tar-creosote mixtures.

1. Simmon and Poole

Simmon and Poole (1978) conducted in vitro microbiological mutagenic assays on P-1 and P-2 using Salmonella typhimurium and Escherichia coli strains. These microbiological assays were conducted both with and without metabolic activation. Metabolic activation was provided by use of an Arochlor 1254-stimulated rat liver homogenate. Metabolic activation provides metabolic steps that the bacteria either are incapable of conducting or do not carry out under the assay conditions.

The Salmonella strains used were all histidine auxotrophs. They included: Strains TA 1537 and TA98 which are sensitive to frameshift mutations, TA 1535 which is sensitive to base-pair substitutions, and TA 100 which is sensitive to base-pair substitutions and some frameshift mutations. The E. coli WP2 strain is a tryptophan auxotroph and is sensitive to base-

pair substitutions. The results of the mutagen tests on P1 and P2 are found in Table 21.

Except at the higher doses which were toxic, creosote P1 and coal tar-creosote P2, Class C, when metabolically activated, demonstrated a mutagenic dose-response and a doubling over the background level in the bacterial assay with Salmonella typhimurium strains TA 1537, TA 98, and TA 100. S. typhimurium strain TA 1535 and E. coli strain WP2 did not demonstrate a positive mutagenic response with metabolic activation. None of the strains demonstrated a positive response without activation. The fact that a mutagenic dose-response was found in the TA 1537, TA 98, and TA 100 S. typhimurium strains indicates that the mutagenic mode of action of the creosote and the creosote-coal tar mixture is by frameshift mutation.

2. Mitchell and Tajiri

Mitchell and Tajiri (1978) tested creosote of AWPA specification P1 and a coal tar-creosote mixture of AWPA specification P2, Class C, for mutagenic activity on an in vitro mamalian mutagenesis assay using L5178Y mouse lymphoma cells heterozygous at the thymidine kinase (TK) locus. The purpose of the test was to determine the effects of the P1 and P2 mixture on the forward mutation frequency of the TK locus, $TK^{+/-} \longrightarrow TK^{-/-}$, relative to the background level. Similar to the microbial assay described above, the mouse lymphoma study was conducted both with and without metabolic activation using an Arochlor 1254 stimulated rat liver homogenate mixture.

The mouse lymphoma cells were grown in suspension culture. The

T = Toxic

P1 and P2 mixtures were dissolved in dimethylsulfoxide (DMSO) and were added to the cell cultures in varying test concentrations. A solvent control using 1% DMSO and a positive control using either dimethylnitrosamine (DMN) (in the presence of metabolic activation) or ethyl methanesulfonate (EMS) (in the absence of metabolic activation) were also tested. The cells were plated (duplicates of each exposure concentration, the solvent control, and the positive control were run) on a selective medium containing trifluorothymidine. The mutated cells grew on the medium; the cells which had not mutated did not grow.

Mutation frequency was calculated as the ratio of the number of mutant cells to surviving cells at each concentration of test chemical. The mean mutation frequency of the negative control samples was subtracted from the mutation frequency of each treated sample to give induced mutation frequencies. A relative total growth was determined for the controls and for each test concentration. The relative total growth is an expression of cell growth in relation to the negative control and is expressed as a percentage (Tables 22 through 25).

Creosote P1 and coal tar-creosote P2 had similar but not identical effects on the forward mutation frequency at the TK locus of L5178Y cells both with and without induced metabolic activation. In the presence of the Arochlor 1254-induced metabolic activation, a dose related increase in mutation frequencies above the spontaneous frequency was established for both P1 and P2. For P1 without metabolic activation, the only concentration that yielded a mutation frequency significantly above the spontaneous frequency was 0.98×10^{-2}. However, the relative total

(84)

growth was below 1%. For coal tar-creosote P2 without metabolic activation, two concentrations, 0.98×10^{-2} % and 0.686×10^{-2} %, yielded a mutation frequency significantly above the spontaneous frequency. Again, the relative total growth value at 0.98×10^{-2} % was below 1% survival. At 0.686×10^{-2} % the relative total growth value was approximately 35%.

3. Conclusion

Simmon and Poole (1978) found that following metabolic activation by Arochlor 1254-stimulated rat liver homogenate both the creosote P1 and the coal tar-creosote P2, Class C, produced a mutagenic dose-response and a doubling above background mutation rate with Salmonella typhimurium strains TA 1537, TA 98, and TA 100. Mitchell and Tajiri (1978) found that, following metabolic activation by Arochlor 1254-stimulated rat liver homogenate, creosote P1 and coal tar-creosote P2, Class C, increased the number of forward mutations at the thymidine kinase locus of L5178Y mouse lymphoma cells in a dose-related manner. The Working Group concluded that P1 and P2, Class C, caused mutations in Salmonella typhimurium strains TA 1537, TA 98, and TA 100, and in L5178Y mouse lymphoma cells. The Working Group, therefore, concluded that P1 and P2 are mutagenic in a multitest system and exceed the criteria of 40 CFR 162.11(a)(3)(ii)(A). Accordingly, the Agency is issuing a rebuttable presumption against creosote and coal tar-creosote mixtures.

C. Exposure

Although 40 CFR 162.11(a)(3)(ii)(A) does not require that exposure be demonstrated in order to presume against a pesticide on the basis of oncogenicity or on the basis of mutagenicity in a multitest system, a discussion of exposure to coal tar, creosote, and coal tar neutral oil is included for comment by interested persons. The Working Group considered three areas of exposure to these substances - industrial wood treatment, food residue, and user exposure.

1. Industrial Wood Treatment

a. General

The most important minor method of application is thermal treatment in which wood is immersed in open troughs filled with hot creosote followed by introduction of relatively cold creosote. The Working Group is not aware of any information on exposure to creosote from thermal treatment. The application of over 90% of all coal tar-creosote mixtures for wood preservation is by pressure treatment (American Wood Preservers' Institute, 1977).

The pressure treatment system is a closed system, and there is no need for direct worker contact with the liquid creosote or coal tar prior to its impregnation into the wood. The material arrives by truck or rail and is pumped into a holding tank where it is weighed. If the material is a creosote/coal tar solution of particular trade specifications, the solution is premixed at the production facility so that no mixing or manual transfer operations are required at the treatment plant. The treatment itself involves pressurization in airtight chambers. No workers are likely to be exposed from the treatment cylinders during the actual treatment process, nor are workers other than treating room operators required to be in the immediate vicinity of the chambers at this time. The treatment operator is responsible for the metering and introduction of coal tar/creosote into the cylinders. This func-

(85)

(86)

tion is performed in a control house near the chambers. In older facilities leakage of coal tar and creosote from old pipes and fittings may result in relatively high inhalation exposure to the treatment operators. Treatment time varies but ranges from about six to seven hours for each change of material. Following treatment, a vacuum is generally applied to withdraw excess preservative. After the excess is withdrawn, the chamber door is cracked open by a doorman. While still under vacuum, prior to withdrawal of the tram cars holding the treated wood, the door remains cracked open for approximately 15 minutes. The greatest opportunity for inhalation exposure appears to occur during the mechanical withdrawal of the tram cars from the pressure chamber. The wood-laden tram cars are linked to an engine and withdrawn to a storage area where the wood remains until shipment to the buyer.

Coal tar and creosote drippage occurs along the rail tracks leading from the chamber. This drippage is collected in ditches alongside the tracks and is pumped to a collecting pond along with creosote that has dripped from the pressure chambers at the time the charge was removed. Dike systems are employed around wood treatment plants to prevent runoff of creosote from the plant area. In at least one case, however, creosote was found to migrate from a treatment plant into the ground water supply of a neighboring community. The plant has since been shut down (Mittelman, 1978).

Non-routine operations such as cleaning of the treatment chamber may occur several times yearly. Workers in such operations are provided with suitable respirators and protective clothing.

b. Inhalation Exposure

On February 24-25, 1976, representatives of the National Institute of Occupational Safety and Health (NIOSH) [U.S. Department of Health, Education, and Welfare (USDHEW), 1977] and of Koppers Company (Smith, 1977) performed two separate air monitoring surveys at a Koppers Company wood preservation plant in Little Rock, Arkansas. Air samples were collected using lapel sampling pumps and analyzed for polycylic particulate organic matter (PPOM) by the NIOSH gravimetric method (NIOSH, 1977). The results of the two studies are presented in Table 26 and Table 27. 1/

Koppers Company also performed an air monitoring survey in July, 1977 (Webb, 1977) at the same Little Rock, Arkansas plant sampled by Koppers

1/ The lapel air sampling pumps collected the PPOM on a silver membrane-glass fiber filter which was held in place by a cellulose pad. Following collection of the air sample, NIOSH (USDHEW, 1977) desorbed the filter and the cellulose pad with cyclohexane. By contrast, Koppers (Williams, 1977) (Table 27) desorbed the filters, but not the cellulose pads, with benzene. The cyclohexane solution, or the benzene solution in the case of the Koppers' analyses, was placed in a teflon cup and the benzene or the cyclohexane was evaporated by placing the cup in a vacuum oven for three hours at 40°C. The weight of the remaining material was the cyclohexane or benzene soluble material. The concentration of mg/m³ was determined by dividing the weight of the cyclohexane or benzene soluble material by the volume of air sampled. The results of the NIOSH analysis were generally higher than those of Koppers'. NIOSH, however, as stated above, desorbed the cellulose pad as well as the filter with cyclohexane, while Koppers desolved only the filter. Analysis of two blank cellulose pads for PPOM by NIOSH produced results of 115 and 120 ug/filter. No adjustment in the NIOSH report was made for the blank cellulose pads. To adjust for the blank samples, 117.5 ug/filter (the average of 115 and 120 ug/filter) was subtracted from the ug/filter reported for the NIOSH test samples by an EPA chemist for the purpose of presenting the table of results in this document. Where no results are reported for the "ug/filter" in Table 26, the ug/filter of the blank sample was higher than the test sample.

TABLE 26

RESULTS OF 1976 NIOSH MONITORING STUDY AT KOPPERS COMPANY WOOD TREATMENT PLANT IN LITTLE ROCK, ARKANSAS (U.S. Department of Health, Education, and Welfare, 1977)

Description (Date)	ug/filter	1/ Air Volume Sampled (m^3)	2/ Concentration In Air (mg/m^3)	3/ Code of Worker or Site
Treating Operator (2/24)	32.5	0.49	0.07	SH-6

1/ The weather conditions during the study were the following: temperature, 72-83°F; relative humidity, 74-91%; barometric pressure, 30.00 inches Hg; and winds from the north at 5 mph.
2/ This is the concentration in the air of benzene soluble material.
3/ This doorman's exposure may have been higher because of his recovering a tram inside the cylinder following a break of the tram tow cable.

Company and NIOSH in July 1976 and using the NIOSH gravimetric technique used in the first Koppers' study. The results of the 1977 study are reported in Table 28.

The 1976 and 1977 Koppers' studies found a range of < 0.01 to 0.10 mg/m^3 benzene soluble material concentration in the air around the Little Rock wood treatment plant. The 1976 NIOSH study found a range of 0.03 to 0.20 mg/m^3 cyclohexane soluble material in the air around the Little Rock plant. No correlation appears to be evident between the type of work performed (e.g. treating operator, locomotive switchman, doorman, etc.) and the amount of air exposure.

There are several limitations to the method of collection employed by NIOSH. As stated, the method of analysis used is a gravimetric method and measures only the benzene or cyclohexane soluble fraction of polycyclic particulate organic matter in air samples. Thus, vapor phase polynuclear aromatic (PNA) hydrocarbons would go uncollected. Also, the gravimetric method used has not been fully evaluated for precision or accuracy nor has the solvent system been properly assessed for extraction efficiency. Another limitation to this method of analysis is its nonspecificity, i.e., the organic material weighed may include innocuous as well as carcinogenic materials.

c. Dermal Exposure

Handling of the treated wood at a pressure treatment plant is performed either mechanically or with metal utensils so that direct dermal exposure is minimal. Some dermal exposure does occur, however, as evidenced by reports of skin sensitization and burns, conjunctivitis, and eye irritation of workers in pressure treatment plants (Goldstein, 1976).

2. Residues in Food

Creosote, coal tar, and coal tar neutral oil are not applied to food crops. Some evidence exists, however, that creosote or creosote-coal tar mixtures may leach out of marine pilings and contaminate marine life in the near vicinity and that this marine life may be eaten by humans or move through the food chain.

Dunn and Stich (1975, 1976a, 1976b) monitored mussel benzo[a]-pyrene contamination, and Zitko (1975) monitored various aquatic fauna for pyrene equivalents. Dunn and Stich (1975) found that mussels taken from a relatively pollution-free location contained higher benzo[a]-pyrene levels (49 ± 5.8 ppb) when near creosoted pilings than when distant from the pilings (2.1 ± 0.3 ppb). Analyses for the B[a]P was performed by thin layer chromatography (TLC) and fluorescent emission spectra. While TLC techniques have, for the most part, been superseded by high pressure liquid chromatography (HPLC) and gas chromatography (GC) methods offering greater separation from potential interferences and greater sensitivity, the data generated is valid and deserves greater investigation. Although it was not conclusively demonstrated that creosote was the source of the B[a]P contamination, it is not unlikely that creosote constituents may migrate from wood over time if only by purely mechanical means such as abrasion or swelling of the wood. The extent of this migration is unknown, but the data provided by Dunn and Stich (1975) must be considered in the absence of better-developed data.

The Working Group concluded that the extent of potential dietary exposure due to shellfish is unknown, but is likely to be small. A total of 3.73 g/day of fresh, frozen, and canned shellfish was consumed per capita in the United States in 1974 (USDA, 1974). If it is assumed that shellfish taken from sites near creosoted pilings contain approximately 50 ppb B[a]P (i.e. 50 ug/kg) (Dunn and Stich, 1975), then the maximum daily intake of B[a]P would be 50 ug/kg x 3.73 g = 0.19 ug/person/day B[a]P. This exposure would result only if all shellfish contained the B[a]P content detected by Dunn and Stich, an assumption without supporting data, and also assuming the data of Dunn and Stich is representative of all shellfish near creosoted pilings.

3. User Exposure

a. Use of Treated Wood

Schwartz (1942) reported that workers exposed to creosoted floors developed erythematous, papular, and vesicular eruptions on their ankles one to two weeks after beginning work. The Pesticide Episode Reporting System (PERS) (1976) reported a number of incidents in which workers handling creosote-treated wood suffered adverse effects from exposure to the creosote (Appendix C).

The Working Group concluded that exposure from the handling of treated wood by workers such as railroad workers, utility pole workers, and workers installing pilings deserved greater attention. When this work is done in the summer, workers would probably incur the greatest potential exposure because of the inconvenience and discomfort of wearing protective clothing during this time of year.

b. Manual Application of Coal Tar, Creosote, and Coal Tar Neutral Oil for Wood Preservation

Birdwood (1938) reported on the permanent damage to vision of two gardeners who had gotten creosote in their eyes while treating fences. Jonas (1943) reported that Navy construction workers developed skin and eye irritation as a result of exposure to creosote while applying the creosote during construction. The Pesticide Episode Reporting System (1976) reported a number of incidents in which workers applying creosote suffered adverse effects from exposure (Appendix D).

The Working Group concluded that applicators who manually apply creosote are exposed, but no information is available to quantify this exposure.

c. Application of Creosote as an Herbicide

The Pesticide Episode Reporting System reported two cases of burns to applicators applying creosote as an herbicide (Appendix E).

The Working Group concluded that exposure to creosote does result from its application as an herbicide. The Working Group, however, is not aware of any information that is available to quantify this exposure.

d. Other Uses

Coal tar neutral oil and creosote are active ingredients of two insecticides used on horse and mule wounds (2 registrations). Coal tar neutral oil and creosote are both active ingredients of disinfectants for water closets, outhouses, garbage cans, animal areas, institutional premises, and sickroom areas (approximately 57 registrations). Coal tar and coal tar neutral oil are active ingredients in pesticide dips and shampoos for dogs (approximately 7 registrations). Creosote is an active

ingredient of a pesticide registered for mite and tick control in poultry houses. Coal tar neutral oil is an active ingredient of a pesticide registered for use on hog houses, sheep barns, dog kennels, and horse stables (6 registrations).

Creosote is an active ingredient in registrations for horse repellent (1 registration), a tree and shrub dressing (3 registrations), and an herbicide (2 registrations). Coal tar is an active ingredient in a crow repellent for seed corn (1 registration) and a human insect repellent (1 registration). Coal tar neutral oil is an active ingredient of approximately 16 mosquito larvicide registrations and 2 gypsy moth larvicide registrations.

No information is available regarding the potential exposure during application for the above uses. The uses involving coal tar and its derivatives in animal dips, washes or shampoos and the use of coal tar as a human insect repellent appear most likely to result in direct human contact.

III. OTHER ADVERSE EFFECTS

A. General

The information in this section relates to other adverse effects of creosote. The Working Group has concluded that the presently available information does not require issuance of a rebuttable presumption against registration on these effects. The Agency does solicit information on these problems, however, and requests that studies be conducted where necessary.

B. Skin and Eye Irritation

The Working Group reviewed several reports indicating that creosote is a potent skin and eye irritant.

Birdwood (1938) reported on two gardeners who got creosote into their eyes while creosoting fences. The two patients both complained of blurred vision and upon examination were found to have maculae upon the cornea and keratitis of the cornea. Birdwood reported that for both patients the impairment of vision would be permanent.

As indicated previously, the Pesticide Episode Reporting System (1976) reported 33 cases of eye damage, burns, or dermatitis resulting from creosote exposure either from treated wood or by application during the period August 1968 to April 1976 (Appendices C,D, and E).

McMillan (1976) reported on the accident history of 50 of the approximately 175 pressure-treating plants in the United States and Canada which use creosote to treat wood. About 3,000 employees out of approximately 7,000 employed in the industry were surveyed. Of those surveyed, 230 were reported to be directly exposed to creosote and fifteen hundred employees were reported to be either directly or indirectly exposed. The report was vague on the period of time which the survey covered. One employer reported for a 6-year period (1969-1975), one employer reported for a 10-year period (1961-1971), and 5 employers' reports were termed "historical." The time period covered for the other 43 plants was not reported. Also vague in the report was the number of treatment plants which documented or did not document the accident history. Of those which were documented, 98 cases of chemical conjunctivitis and 19 cases of eye irritation were reported. At least one treatment plant reported that eye irritation was "occasional." Sixty cases of skin burns and two allergic reactions were reported. At least one plant reported that skin burns were "infrequent."

Pfitzer et al. (1965) found that the instillation of 0.1 milliliter of creosote into the eyes of rabbits caused the conjunctiva to become slightly erythematous. Examination of the exposed eyes 24 hours following exposure showed that slight redness of the conjunctiva persisted in two of the eyes tested and the remaining four exposed eyes were essentially free of irritation. All of the exposed eyes were free of any apparent effects after seven days. Pfitzer et al. (1965) also reported that the contact of creosote with the intact and abraded areas of the skin of the bellies of rabbits for a maximum period of 24 hours produced moderate erythema and moderate to severe edema. The skin reactions remained relatively unchanged 72 hours following exposure. After 14 days, the exposed areas revealed severe epidermal flaking.

Schwartz (1942) reported that workers exposed to creosote treated floors developed erythematous, papular, and vesicular eruptions on their uncovered ankles one to two weeks after beginning work.

Jonas (1943) treated 450 Navy construction workers (1/6 of the workers at a Navy camp) for creosote burns. He found that fair-skinned, light-haired workers were particularly affected by creosote burns and that the number of burns increased on sunny days. Seventy percent of the burns were mild, while 30% were more severe and characterized by intense burning, itching, and considerable subsequent pigmentation followed by

desquamation. Fifteen percent of the 450 patients had inflammation of the conjunctiva, with mild cases being characterized by hyperemnia of the mucus membranes and more severe forms by photophobia and a large amount of serous secretion. Three percent had injuries to the cornea varying from small abrasions to multiple large ones. One-third of these cases developed permanent corneal scars leaving hazy vision. These injuries were caused by flying chips of creosoted wood.

C. Toxicity to Livestock

The Working Group reviewed several reports indicating that creosote may have been responsible for toxic effects and death in some livestock.

1. Hanlon

Hanlon (1936) reported the loss of four steers and two cows from a lot of 94 head of cattle from what appeared to be creosote poisoning. The cattle were believed to have licked electric light poles which had recently been creosoted. Symptoms in affected animals consisted of extremely rapid respiration and evidence of burning over the mucosa of the mouth, tongue and lips, which were white and hardened. The pupils were contracted, the skin was cold, and the animals were in a comatose condition. Feces were black in color and the affected animals were apparently in agony. In the early stages they were reported to have evinced great thirst. A steer in extremis was killed, and an autopsy carried out immediately. Intense inflammation and congestion was evident in the whole gastrointestinal tract.

2. Lander

Lander (1926) (cited in Hanlon, 1936 and Harrison, 1959) reported

the death of stock that had access to freshly treated railway ties. He stated that water may dissolve sufficient cresols from creosote-treated sleeper ties to cause livestock poisoning.

3. Wanntorp

Wanntorp (1953) (cited in Harrison, 1959) described several cases in which calves and cows died or had to be slaughtered after licking creosoted wood or poles. He mentions also the possibility that losses of poultry following the treatment of fowl houses with carbolineum (a high boiling point tar oil) may have been due to poisoning by tar derivatives.

4. Luke

Luke (1954) reported the death of four pigs, the suspected cause of which was the ingestion of coal tar pitch from the floor of their pen. The floor was made of old railway ties leveled off with pitch. Prior to death, the appetite of the pigs was very poor and coughing was widespread. Postmorten examination of the pigs found marked enlargement of the liver and several other liver anomalies in all four cases. Also, the abdominal cavities contained varying quantities of bloodstained fluid, and there was an excess of straw colored fluid in the pleural cavities. A pyogenic pneumonia was found in two carcasses, and in one of these there was a well-marked pericarditis. The lungs were normal in two cases and in one of these a marked cystic condition of the kidneys was found. C. pyogenes was isolated from the pneumonic lungs but cultures from liver, spleen, and heart blood were uniformly negative. From their findings, the authors concluded that pneumonia was not the principal cause of death, but that the death resulted from the liver damage. To test this hypothesis, the pitch was fed to two

groups of healthy pigs. Group A was comprised of three healthy pigs, each about 60 pounds in weight, and Group B of two pigs, each about 40 pounds in weight. The pigs in Group B were not thriving quite as well as those in Group A. A quantity of pitch was ground up and a small quantity added daily to the food for both groups. Over a period of 28 days, Group A received a quantity of two pounds of pitch. The pigs in Group B received four ounces of pitch over a period of 12 days. In both groups the addition of the pitch affected appetite and the pigs tended to be constipated. At the end of feeding for both groups, the pigs were killed and examined. In all three cases from Group A the pigs showed an enlargement of the liver together with a degree of liver damage similar to those of the original cases. Extensive liver lesions and a marked excess of peritoneal fluid were found in the pigs of Group B. Histological examination of the affected liver tissue from both field and experimental animals showed similar changes, viz. a marked central necrosis of the lobules which in some cases had completly destroyed the normal liver cell.

5. Harrison

Harrison (1959) determined from his experimental data that a 30 kg sheep would have to ingest 300 g of wood or 120 g of creosote to receive an acutely fatal dose; a 100 kg calf would have to ingest 1,000 g of wood or 400 g of creosote for the dose to be acutely fatal. These acute lethal doses are not LD 50 values, however. A chronic fatal dose for sheep would be 37.5 g of wood or 15 g of creosote ingested per day over a 1 month period; a chronic fatal dose for calves would be 125 g or 50 g of creosote per day for at least 11 days. Harrison thought that

the only danger to stock would be through their access to the raw preserving fluid either near stacks of freshly impregnated timber or on freshly treated farm timber and nearby contaminated vegetation.

6. Olafson and Leutritz

Olafson and Leutritz (1958) applied creosote to the skin of calves over the jaw area to preclude licking off the material. About three days after application, the skin developed slight swelling and became harder than normal. Gray creases appeared. From 7 to 10 days later, a dry crusty thickening of the skin had occurred. Healing took place slowly and recovery was not complete in four weeks.

Olafson and Leutritz (1958) also studied calf response following oral administration of creosote. They reported that a 1,000-pound cow would have to ingest over 75 cc of creosote before appreciable harm would result, although the exact basis for this determination was not stated.

D. Fetotoxicity

The Working Group identified one livestock study, the results of which may pose a question as to the fetotoxicity of creosote.

Schipper (1961) found a creosote-related fetotoxic effect with pregnant sows; the platforms of the cages in which the sows were housed had had three brush applications of a commercial creosote wood preservative. The sows were confined in the cages 2 and 10 days before giving birth. Twenty-four of the forty-one pigs delivered by the four sows were dead at birth. Of the remaining offsprings, six pigs died on day 1, four pigs on day 2, and one pig on day 3. The surviving pigs had rough skin, were dehydrated, and had severe diarrhea; weight gains were hindered until they were 5 and 6 weeks old. A control group was not included in the study, and the author did not report the route nor the amount of exposure.

Appendix A

SPECIFICATIONS FOR COAL-TAR CREOSOTE (NEW MATERIAL) (Fuller, 1977)

SPECIFICATION NUMBER	P1-65[1]	P2-65[2]	D390-67[3]	TT-C-645b[4]		
				Class 1	Class 2	Class 3

APPENDIX C (Cops & Fin. Cops Ctr)

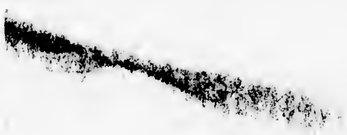
REPORT OF EPISODES OF EXPOSURE TO CREOSOTE FROM TREATED LUMBER 1/
(Adapted from PLRS, 1976)

Date of Episode	State	Causative Agent Verification 2/	Remarks 3/
2/25/73	CA	Probable	A dockworker developed a rash on his arms after contacting crates coated with creosote.
4/5/73	CA	Probable	A carpenter sustained chemical burns on his face, hands and arms while painting fence posts with creosote.
4/12/73	CA	Yes	A carpenter was handling timbers at a shipyard. Creosote splashed into his left eye, which developed redness and pain.
4/26/73	CA	Probable	A welder developed a rash on his hips, chest, thighs and trunk while working around treated railroad ties.
6/1/73	CA	Probable	A maintenance man developed an erythematous rash, first degree burns and chemical irritation while handling freshly treated poles.
6/29/73	CA	Probable	A wood worker developed first degree chemical burns when he rubbed the chemical on his face while working.
7/9/73	CA	Probable	An equipment operator for a county water agency was removing poles treated with creosote all day. His face and neck became red, swollen and sore.
8/9/73	CA	Probable	A lineman was holding treated utility poles with gloves when he wiped his face, thereby transferring creosote from the gloves to his face. Diagnosed as chemical burn.

APPENDIX C
(continued)

REPORT OF EPISODES OF EXPOSURE TO CREOSOTE FROM TREATED LUMBER 1/
(Adapted from PLRS, 1976)

Date of Episode	State	Causative Agent Verification 2/	Remarks 3/
9/20/73	CA	Probable	Laborer developed contact dermatitis on his buttocks while working with treated lumber.
1/75	CA	Yes	Laborer working with treated wood developed dermatitis on hands and arms.



1/ Records checked from 1967 through April, 1976.
2/ Verification indicates whether the pesticide associated with the episode was established as the causative agent which resulted in death, illness, etc. "Yes" indicates that substantial evidence exists linking the pesticide to the episode's effects; "Probable" indicates circumstantial evidence exists linking the pesticide to the episode's effects.
3/ In all cases 1 human received medical attention.

APPENDIX C (Cops & Fin. Cops Ctr)

REPORT OF EPISODES OF EXPOSURE TO CREOSOTE FROM TREATED LUMBER 1/
(Adapted from PLRS, 1976)

Date of Episode	State	Causative Agent Verification 2/	Remarks 3/
2/23/72	CA	Probable	A carpenter developed chemical conjunctivitis after getting creosote in his eye at work.
8/72	CA	Probable	A carpenter sustained burns of the face, arms and hands when he came into contact with creosote spray.
10/2/72	CA	Probable	A construction worker developed a rash on all extremities while working with creosote.
4/23/73	CA	Probable	A construction worker developed chemical burns of both forearms while carrying creosote-treated wood.
4/26/73	CA	Probable	A laborer at a lumber yard sustained first degree burns on both arms while moving creosote ties a ton.
6/6/73	CA	Probable	A laborer developed erythema of the face, neck and forearms when he inadvertently rubbed creosote on them.
6/11/73	CA	Probable	A carpenter splashed creosote into both eyes and developed chemical keratoconjunctivitis.
6/16/73	CA	Probable	A carpenter spilled creosote on arms and face and developed superficial irritation of arms and face.
6/27/73	CA	Probable	A student got creosote on forearms while painting posts and developed chemical burn.

APPENDIX E
(continued)

REPORT OF EPISODES OF EXPOSURE TO CREOSOTE FROM APPLICATION 1/
(Adapted from PLUS, 1976)

Date of Episode	State	Causative Agent Verification 2/	Remarks 3/
7/24/73	CA	Probable	A laborer developed first degree burns of the arms, face and hands after painting posts with creosote.
7/26/73	CA	Probable	A carpenter sustained first degree burns on his face, forearms and lower abdomen when he splashed the material on himself during an application operation.
7/31/73	CA	Probable	A laborer for a construction company sustained a chemical burn when the material was sprayed on his arms and face.
9/24/73	CA	Probable	A laborer got creosote in his face and eyes thereby sustaining a chemical burn.
8/24/74	MD	Yes	A woman was injured when the can from which she was pouring creosote onto the foundation of her house, slipped from her hand, splashing the chemical on her legs and into her eyes.
4/25/75	CA	N/A	A man was applying creosote to a ramp when he accidentally splashed it on his face. The effect of the accident was not reported.
5/25/75	CA	Probable	An employee was treating a wooden block. Material splashed onto him, resulting in contact dermatitis.

1/ Records checked from 1967 through April, 1976.
2/ Verification indicates whether the pesticide associated with the episode was established as the causative agent which resulted in death, illness, etc. "Yes" indicates that substantial evidence exists linking the pesticide to the episode's effects; "Probable" indicates circumstantial evidence exists linking the pesticide to the episode's effects.
3/ In all cases 1 human received medical attention.

APPENDIX E

REPORT EPISODES OF BURNS SUFFERED FROM THE APPLICATION OF CREOSOTE AS AN HERBICIDE (Adapted from PERS, 1976) 1/

Date of Episode	State	Causative Agent Verification 2/	Remarks 3/
4/21/73	CA	Probable	A pest control operator sustained chemical burns of the face while spraying weeds.
6/14/73	CA	Probable	A lumber company worker was spraying weeds. Wind blew the herbicide into his face and the worker sustained first degree burns.

1/ Records checked from 1967 through April, 1976.
2/ Verification indicates whether the pesticide associated with the episode was established as the causative agent which resulted in death, illness, etc. "Yes" indicates that substantial evidence exists linking the pesticide to the episode's effects; "Probable" indicates circumstantial evidence exists linking the pesticide to the episode's effects.
3/ In all cases 1 human received medical attention.

PESTICIDE PROGRAMS

Notice of Rebuttable Presumption Against Registration and Continued Registration of Pesticide Products Containing Inorganic Arsenic

AGENCY: Office of Pesticide Programs, Environmental Protection Agency (EPA).

ACTION: Notice of rebuttable presumption.

SUMMARY: Inorganic arsenic has been found to exceed certain risk criteria set forth in 40 CFR 162.11. This notice requests registrants and other interested persons to submit rebuttals and other information on the presumption and to submit any other data on the risks and benefits of this pesticide chemical. This notice is the first of several which will give public notification of the Agency's progress in reviewing this chemical. Today EPA is also publishing in the FEDERAL REGISTER notices of rebuttable presumption against registration (RPAR) on pentachlorophenol (PCP) and coal tar, creosote, and coal tar neutral oil. Since inorganic arsenic, PCP, and coal tar and its derivatives comprise the most widely used of pesticide wood treatments available, the wood treatment uses of these pesticides will be considered together in the risk/benefit part of the RPAR review process. Other uses for these pesticides will be considered in individual risk/benefit analyses for each chemical.

DATE: Rebuttal evidence and other information must be received on or before December 4, 1978.

ADDRESS MATERIAL TO: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room, 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

William Waugh or Anita Schmidt, Special Pesticide Review Division, Office of Pesticide Programs (TS-791), Room 447, East Tower, EPA, 202-755-5755.

SUPPLEMENATARY INFORMATION: The Deputy Assistant Administrator, Office of Pesticide Programs, EPA, has determined that a rebuttable presumption exists against registration and continued registration of all pesticide products containing inorganic arsenic.[1]

Issuance of this RPAR means that potential adverse effects associated with the use of inorganic arsenic have been identified and will be examined further to determine if they do exist and, if so, whether they are unreasonable. This process involves a public review of both the risks and the benefits associated with the uses of the pesticide. The RPAR does not mean that the Agency has decided to cancel or suspend the registration of this pesticide or to take any other action with respect to it; EPA has not made a finding that use of any products containing this ingredient presents an imminent hazard. Any pesticide subject to this RPAR may lawfully be sold, distributed, and used for all uses for which it is registered and labeled.

I. REGULATORY PROVISIONS

A. *General.* Title 40, part 162.11, of the Code of Federal Regulations for the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (86 Stat. 973, 89 Stat. 751, 7 U.S.C. 136 et seq.), provides that a rebuttable presumption against registration shall arise if the Agency determines that a pesticide meets or exceeds any of the risk criteria relating to acute and chronic toxic effects set forth in section 162.11(a)(3). If it is determined that such a rebuttable presumption has arisen, the regulations require that the registrant be notified by certified mail and afforded an opportunity to sumbit evidence in rebuttal of the presumption. In addition, the Agency has determined that the public should also be given notice of the bases for the presumption to provide an opportunity for comment and to solicit additional information relevant to the presumption.

A notice of rebuttable presumption against registration is issued when the evidence related to risk meets the criteria set forth in section 162.11(a)(3). It is emphasized that a notice of rebuttable presumption against registration and continued registration of a pesticide is not a notice of intent to cancel the registration of a pesticide, and may or may not lead to cancellation. The notice of intent to cancel is issued only after the risks and benefits of a pesticide are carefully considered and it is determined that the pesticide may generally cause unreasonable adverse effects to the environmnet.

All registrants and applicants for registration are invited pursuant to 40 CFR 162.11(a)(4) to submit evidence in rebuttal of the presumptions listed in part II of this notice and, in the case of oncogenicity, to submit information which relates to the assessment of oncogenic risks as set forth in the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogens (May 25, 1976; 41 FR 21402). Registrants and other interested parties may submit for consideration data on benefits which they believe would justify registration or continued registration. In addition, any registrant may petition the Agency to voluntarily cancel a current registration pursuant to section 6(a)(1) of FIFRA.

B. *Rebuttal criteria.* Section 162.11(a)(4) provides that a registrant may rebut the presumption by sustaining the burden of proving:

(1) In the case of a pesticide presumed against pursuant to the acute toxicity or lack of emergency treatment criteria, "that when considered with the formulation, packaging, method of use, and proposed restrictions on the directions for use and widespread and commonly recognized practices of use, the anticipated exposure to an applicator or user and to local, regional, or national populations of nontarget organisms is not likely to result in any significant acute adverse effects" [40 CFR 162.11(a)(4)(i)];

(2) In the case of a pesticide presumed against pursuant to the chronic toxicity criteria, "that when considered with proposed restrictions on use and widespread and commonly recognized practices of use, the pesticide will not concentrate, persist or accrue to levels in man or the environment likely to result in any significant chronic adverse effects" [40 CFR 162.11(a)(4)(ii)]; or

(3) In either case, that "the determination by the Agency that the pesticide meets or exceeds any of the criteria for risk was in error" [40 CFR 162.11(a)(4)(iii)].

C. *Benefits information.* In addition to submitting evidence to rebut the presumption of risk, section 162.11(a)(5)(iii) provides that a registrant "may submit evidence as to whether the economic, social, and environmental benefits of the use of the pesticide subject to the presumption outweigh the risk of use." If the risk presumptions are not rebutted, the benefit evidence[2] submitted by the

[1] A position document, containing an appendix of references, background information, and other material pertinent to the issuance of this notice, has been prepared by the Agency on inorganic arsenic and is also published with this notice.

[2] Registrants or other interested persons who desire to submit benefit information should consider submitting information on the following subjects, along with any other relevant information they desire to submit:

1. Identification of the minor uses of the pesticide, including estimated quantities used by crop or other application.
2. Identification of the major uses of the pesticide, including estimated quantities used by category such as lawn and garden uses and household uses.
3. Identification of registered alternative products for the uses set forth in (1) and (2) above, including an estimate of their availability.
4. Determination of the change in costs to the user of providing equivalent pesticide

Footnotes continued on next page

registrant, applicants, and other interested persons will be considered by the Administrator in determining the appropriate regulatory action. Specifical-

Risk and Economic Impact Assessment of Suspected Carcinogens [May 25, 1976; 41 Fr 21402] states that "a substance will be considered a presump-

ments and information received with respect to the potential adverse effects, includig analysis thereof, may serve as a basis for a final decision on

V. DUTY TO SUBMIT INFORMATION ON ADVERSE EFFECTS

Registrants are required by law to

from the use of inorganic arsenic are requested to be submitted. All comments and information received, as well as any other relevant information

V 4 3 / 2 0 2

registrant, applicants, and other interested persons will be considered by the Administrator in determining the appropriate regulatory action. Specifically, section 162.11(a)(5)(iii) provides that if the benefits appear to outweigh the risks, the Administrator may issue a notice of intent to hold a hearing pursuant to section 6(b)(2) of FIFRA to determine whether the registration(s) should be cancelled or application(s) denied. Alternatively, if the "benefits do not appear to outweigh the risks, the Administrator shall issue a notice pursuant to section 3(c)(6) or section 6(b)(1) of the Act, as appropriate." Moreover, if at any time the Administrator determines that a pesticide poses an "imminent hazard" to humans or the environment, a notice of suspension may be issued pursuant to section 6(c) of the Act.

II. Presumptions

Registrations and applications for registration of pesticide products containing inorganic arsenic meet or exceed the 40 CFR 162.11(a)(3) risk criteria relating to oncogenic effects (human epidemiology studies), mutagenic effects, and reproductive or fetotoxic effects in mammalian test species. The Agency's basis for concluding that these risk criteria have been met or exceeded is set out in "Inorganic Arsenic: Position Document 1," which follows. Copies of attachments to the position document which are not published with this notice are available for public inspection in the office of the Special Pesticide Review Division. Information protected from disclosure pursuant to FIFRA Section 10 cannot be provided. Specific inquiries concerning the position document, as well as requests for access to these files, should be directed to Project Managers William Waugh or Anita Schmidt, Special Pesticide Review Division (TS-791), EPA, Room 447, East Tower, 401 M Street SW., Washington, D.C. 20460. 202-755-5755.

A. *Oncogenicity.* 40 CFR Section 162.11(a)(3)(ii)(A) provides that a rebuttable presumption shall arise if a pesticide "(i)nduces oncogenic effects in experimental mammalian species or in man as a result of oral, inhalation, or dermal exposure * * *." As a further clarification of the provision, the preamble to the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogens [May 25, 1976; 41 Fr 21402] states that "a substance will be considered a presumptive cancer risk when it causes a statistically significant excess incidence of benign or maliganant tumors in humans or animals."

On the basis of scientific studies and information summarized in the position document, the Agency has concluded that all registrations and applications for registration of pesticide products containing inorganic arsenic exceed this risk criterion, and that a rebuttable presumption against new or continued registration of such products has arisen.

B. *Mutagenicity.* 40 CFR Section 162.11(a)(3)(ii)(A) provide that a rebuttable presumption shall arise if a pesticide "* * * induces mutagenic effects, as determined by multitest evidence."

On the basis of scientific studies and information summarized in the position document, the Agency has concluded that all registrations and applications for registration of pesticide products containing inorganic arsenic exceed this risk criterion, and that a rebuttable presumption against new or continued registration of such products has arisen.

C. *Other chronic or delayed toxic effects.* 40 CFR Section 162.11(a)(3)(ii)(B) provides that a rebuttable presumption shall arise if a pesticide "(p)roduces any other chronic or delayed toxic effect in test animals at any dosage up to a level, as determined by the Administrator, which is substantially higher than that to which humans can reasonably be anticipated to be exposed, taking into account ample margins of safety * * *."

On the basis of scientific studies and information summarized in the position document, the Agency has concluded that all registrations and applications for registration of pesticide products containing inorganic arsenic exceed this risk criterion for reproductive or fetotoxic effects and that a rebuttable presumption against new or continued registration of such products has arisen.

Additional Grounds for Review

As discussed in detail in the attached position document, some data has associated inorganic arsenic with delayed neurotoxicity and population reduction in nontarget aquatic and mammalian species. The data and analyses available at this time with respect to these effects are not sufficient to warrant the issuance of a rebuttable presumption. The Agency specifically solicits further evidence bearing on these possible adverse effects. All comments and information received with respect to the potential adverse effects, includig analysis thereof, may serve as a basis for a final decision on registering pesticides containing inorganic arsenic.

IV. Rebuttal Submission Procedures

All registrants and applicants for registation listed below are being notified by certified mail of the rebuttable presumption existing against registration and continued registration of their products.

The registrants and applicants for registration shall have 45 days from the date this notice is sent of until December 4, 1978, to submit evidence in rebuttal of the presumption. However, the Adminstrator may, for good cause shown, grant an additional 60 days during which such evidence may be submitted. Notice of such an extension, if granted, will appear in the Federal Register.

A registrant or applicant for registration, may, if it desires, assert a business confidentiality claim covering part or all of the information submitted in rebuttal. The registrant or applicant may assert the claim by placing on or attaching to the information a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as "trade secret," "proprietary," or "company confidential." Allegedly confidential portions of otherwise nonconfidential documents should be clearly marked.

If a confidentiality claim is asserted, the information covered by the claim will be disclosed by EPA only to the extent and by means of the procedures set forth in 40 CFR Part 2, Subpart B (41 FR 36906; September 1, 1976). If no confidentiality claim accompanies the information at the time it is received by EPA, EPA will place the information in the public comment file where it will be available for public inspection.

If a registrant of applicant does assert a confidentiality claim for some but not all, of the information submitted to EPA in rebuttal, the registrant or applicant should furnish two copies of the information to EPA. The first copy should contain all of the information submitted in rebuttal with information claimed as confidential clearly identified. The second copy should be identical to the first except that all information claimed as confidential should be deleted. The second copy will be placed in the public comment file. The first copy will be treated in accordance with the procedures set out above.

Footnotes continued from last page

treatment with any available substitute products.

5. Assessment of regulation impact upon user productivity (e.g., yield per acre and/or total output) from using available substitute pesticides or from using no other pesticides.

6. If the impacts upon either user costs or productivity are significant, a qualitative assessment of the regulation's impact on production of major agricultural commodities and retail food prices of such commodities.

V. Duty To Submit Information on Adverse Effects

Registrants are required by law to submit to EPA any additional information regarding any adverse effects on man or the environment which comes to a registrant's attention at any time, pursuant to section 6(a)(2) of FIFRA and 40 CFR 162.8(d). If any registrant of inorganic arsenic products has any published or unpublished information, studies, reports, analyses, or reanalyses regarding any adverse effects in animal species or humans, residues, and claimed or verified accidents to humans, domestic animals, or wildlife, which have not been previously submitted to EPA, the material must be submitted immediately. When responding to this notice, each registrant shall submit a written certification to the Agency that all information regarding any adverse effects known to the registrant has been submitted. In addition, the registrants should notify EPA of any studies currently in progress, including the purpose of the study, the protocol, the approximate completion date, and a summary of all results observed to date.

VI. Public Comments and Inspection

During the time allowed for submission of rebuttal evidence, specific comments on the presumptions set forth in this notice and on the material contained in the position document are solicited from the public. In particular, any documented episodes of adverse effects to humans, domestic animals, or wildlife, and information as to any laboratory studies in progress or completed are requested to be submitted to EPA as soon as possible. Specifically, information on the fate and effects of inorganic arsenic, its impurities, metabolites, and degradation products on flora and fauna, particularly animals with metabolism similar to man, is solicited. Similarly, any studies or comments on the benefits from the use of inorganic arsenic are requested to be submitted. All comments and information received, as well as any other relevant information and analysis thereof, which come to the attention of the Agency may serve as a basis for final determination pursuant to section 162.11(a)(5).

All comments and information should be sent to the office of the Federal Register Section at the address given above, if possible in triplicate to facilitate the work of the Agency and others interested in inspecting them. The comments and information should bear the identifying notation "OPP-30000/29." Comments received after the specified time SSF period will be considered only to the extent feasible, consistent with the time limits imposed by 40 CFR Section 162.11(a)(5)(ii).

All written comments and information filed pursuant to this notice will be available for public inspection in the office of the Federal Register Section from 8:30 a.m. to 4 p.m. during normal working days. Interested persons are encouraged to take advantage of the opportunity to inspect Agency files during normal working hours since (1) all of the information recieved may serve as a basis for final determination pursuant to section 162.11(a)(5) and (2) the Agency will not generally publish a summary of information recieved in the Federal Register at the close of the rebuttal period.

Your cooperation is solicited in identifying any errors or omissions which may have been made in the following computer listings. Corrections to the listings may not necessarily be published in the Federal Register, but rather handled by mail with affected parties. Omissions will be corrected by notice in the Federal Register.

Dated: September 30, 1978.

Edwin L. Johnson,
Deputy Assistant Administrator for Pesticide Programs.

INORGANIC ARSENICALS

Position Document 1

William T. Waugh
and
Anita L. Schmidt
Project Managers

INORGANIC ARSENICALS (Arsenic Acid, Arsenic Pentoxide, Arsenic Trioxide, Sodium Arsenate, Ammonium Arsenite, Sodium Pyroarsenate, Lead Arsenate (Standard and Basic), Calcium Arsenate, Sodium Arsenite, and Copper Acetoarsenite): POSITION DOCUMENT 1

SUMMARY

Arsenic is an ubiquitous element that occurs naturally in soil, water, microorganisms, plants, animals, and humans. This document focuses on those pesticides containing inorganic arsenic (ammonium arsenite, arsenic acid, arsenic pentoxide, arsenic trioxide, calcium arsenate, copper acetoarsenite, lead arsenate, sodium arsenite, sodium arsenate, and sodium pyroarsenate). These pesticides are in the form of either arsenite or arsenate, both of which are found in nature.

Inorganic arsenicals were among the first chemical insecticides used, and they are still being used today as insecticides, herbicides, wood preservatives, and as a maturing agent for grapefruit. Tolerance levels for residues of inorganic arsenic pesticides have been set by EPA for various foods such as fruit, vegetables, and meats. Arsenic also occurs in food and feed as a natural constitutent.

Absorption of inorganic arsenic (from natural and pesticide sources) by plants from soil, water, and air is influenced by several factors. Aquatic animals ingest or absorb arsenic directly from the surrounding water; terrestrial animals are exposed primarily by ingestion of contaminated feed. Exposure to humans, primarily from pesticides and smelters, is by ingestion, inhalation, and absorption through the skin. In mammals, arsenite and arsenate are differentially absorbed through various body tissues (i.e., skin, lungs, digestive tract).

Arsenic is distributed in plant tissues primarily in the roots and vegetative tissues; fruits usually have the lowest levels of arsenic. Arsenic distribution in animals is influenced by several factors such as the form of arsenic, species of animal, and route of exposure (oral, dermal, inhalation). In mammals, including humans, inorganic arsenic is distributed primarily in the liver, lungs, kidney, and spleen. There are also high levels of arsenic bound in hair and nail tissue. Since arsenic is a natural environmental contaminant, it is always present in human and animal tissues. The normal adult human body contains an estimated 15 to 20 mg of arsenic.

The biochemical mechanisms of toxic action for arsenate and arsenite differ: arsenate blocks the formation

of high energy compounds needed for cellular metabolism, and arsenite binds to proteins and inhibits the activity of several important enzymes. Arsenic does not normally build up beyond trace levels in mammalian tissues because a dynamic equilibrium is apparently reached between normal intake and excretion. Arsenite and arsenate are excreted at different rates: arsenate is generally excreted quickly from the body by the kidney, while arsenite is slowly excreted as it is released from tissue proteins to which it is bound.

Inorganic arsenic can be converted from one form to another by the metabolic activity of plant and animal cells. This is called biotransformation. In humans the conversion of arsenite to arsenate is favored, but animal studies have shown that arsenate can also be converted to arsenite. Both forms can also be converted to organic arsenic compounds such as methylarsenates. In soil, sediments of rivers and lakes, and water, transformation of arsenic (primarily to volatile organic forms) is mediated by microorganisms under both aerobic (oxygen present) and anaerobic (no oxygen present) conditions.

Although there are several sources of inorganic arsenic (i.e., natural weathering of arsenic-containing rock, smelters, volcanic debris, and pesticides), residues from pesticides are a major source of arsenic pollution of soil, water, and air, and are the most widely distributed in the environment. Adsorption (adhesion) of arsenic to soil particles is dependent on several factors, and the adsorbed arsenic is fixed in the soil and is slightly soluble. The soluble unfixed arsenic is subject to leaching. Arsenic is naturally removed from the soil by volatilization (from biotransformation), leaching, wind-born dust, run-off, and plant uptake. Residues in soil from pesticide use are concentrated in the surface layers, and leaching usually occurs at a rate approximately equal to the addition of more pesticide. However, in some cases (i.e., apple orchards in Washington state), the extensive use of inorganic arsenicals has exceeded the leaching rate and rendered the soil very toxic to plants.

The content of arsenic is higher in sea water than in fresh water, except for fresh water near natural deposits of arsenic, areas of volcanic activity, or near pollution sources such as pesticide run-off. There is an equilibrium between arsenite and arsenate in sea water. In the upper oxidizing layers of the ocean, arsenic is primarily in the arsenate form; in the lower areas where reduction occurs, it is most often in the arsenite form. Arsenic is removed from solution by volatilization (from biotransformation) and adsorption by sediments.

Arsenic in air results primarily from human activities (i.e., smelting metals, ginning cotton, applying pesticides) and to a lesser extent from volcanic and bacterial action. Arsenic moves in air adsorbed to particulate matter and returns to soil by direct fallout and precipitation.

Arsenic apparently does not biomagnify: inorganic arsenic residues from pesticide use are not transferred from lower to higher organisms in the food chain, and therefore a greater concentration of arsenic does not occur in higher organisms than is present in lower forms. However, arsenic does bioaccumulate: residues can build-up in certain species. Due to the higher concentration of arsenic in salt water, marine organisms (plant and animal) tend to accumulate arsenic to a greater extent than freshwater forms. Lower food chain forms (plankton) usually have the highest arsenic residues.

The oncogenic, mutagenic, and teratogenic effects of inorganic arsenical pesticides are described in studies presented in this document. These effects are due to the action of the arsenate or arsenite portion of the parent compound rather than the compound as a whole (i.e., lead arsenate, sodium arsenite).

Therefore, if any arsenite form of arsenic produces a given effect, it is assumed that all arsenites are capable of producing the effect. The same is assumed for arsenates. There is also interconversion of the two forms in the body (arsenate reduced to arsenite, arsenite oxidized to arsenate). In mammals, conversion of arsenite to arsenate in the body is well documented. There is also evidence that arsenate can convert to arsenite in vivo, but this is less well-documented.

Arsenic is unique as a suspect carcinogen because an animal testing system has not yet been found that produces a carcinogenic response in rodents. There are numerous human epidemiology studies, however, which describe oncogenic effects from long-term exposure to arsenite and arsenate. These include the chronic use of potassium arsenite (Fowler's solution) for medical treatment of psoriasis and other conditions, chronic exposure to high levels of arsenic (form unknown) in drinking water, chronic exposure to arsenic trioxide (arsenite) in smelters and pesticide manufacturing plants, and chronic exposure to arsenate and arsenite in pesticide manufacturing plants and to insecticides in vineyards. The Agency concludes that sufficient epidemiological data exists to show that both forms of arsenic act as oncogens in humans and therefore recommends that an RPAR be issued against each inorganic arsenical pesticide.

There are many different tests that show arsenate and arsenite are mutagens (produce heritable genetic change) in bacterial cells, cultured human cells, and in rodents. The effects seen are point mutations (bacterial cells), inhibition of a DNA repair system and of DNA synthesis (cultured human epidermal cells), dominant-lethal effects (mice), chromosome effects such as sister chromatid exchange (cultured human lymphocytes), and translocations, aneuploidy, and chromatid breakage (cultured human leukocytes and lymphocytes). EPA concludes that sufficient data exist to show that both forms of arsenic produce mutagenic effects and therefore recommends that an RPAR be issued against each inorganic arsenical pesticide.

There are numerous studies that show arsenate and arsenite are teratogens (produce birth defects). In these studies, pregnant mice, rats, and hamsters were given arsenic either orally or by injection. Both forms of arsenic produced external body, soft tissue, and skeletal malformations, but arsenite produced these defects at lower doses than arsenate. EPA concludes that there is sufficient evidence that both forms of arsenic display teratogenic effects. Based on the level of exposure of each arsenical pesticide to a 60-kg woman (see Section III), EPA further concludes that an ample margin of safety does not exist for any use of the inorganic arsenicals and recommends that an RPAR be issued against these pesticides.

I. BACKGROUND

A. Chemical/Physical Characteristics

Arsenic occurs in both organic and inorganic forms. Organic arsenic differs from inorganic in that organic forms usually contain carbon (EPA 1976a).

The chemistry of arsenic is complex because arsenic can have multiple valence states. Each valence state of arsenic exhibits distinctly different chemical properties. Arsenic acid, arsenic pentoxide, calcium arsenate, lead arsenate, sodium arsenate, and sodium pyroarsenate are pentavalent arsenicals; ammonium arsenite, arsenic trioxide, copper acetoarsenite, and sodium arsenite are trivalent arsenicals. Knowledge of the conditions that promote interconversions between valence states, particularly those that promote the prevalence of trivalent arsenic, is important in evaluating the environmental effects of arsenic (Oak Ridge 1976).

(1) Pentavalent Arsenicals

(a) Arsenic Acid

Arsenic acid, an inorganic arsenical desiccant and herbicide, is the common name for orthoarsenic acid. The chemical formula is H_3AsO_4; the molecular weight is 151.1; and the density is 2.0 to 2.5 (Meister 1977). It exists as

white, translucent crystals at 20°C. The melting point is 35.5°C, and the boiling point is 160°C in the anhydrous state. The solubility of arsenic acid in water is 167 g/liter (Oak Ridge 1976).

(b) Arsenic Pentoxide

Arsenic pentoxide is an inorganic arsenical wood preservative, and an intermediate in the production of metal arsenates. The chemical formula is As_2O_5; the molecular weight is 229.8; and the density is 4.3. It exists as a white, amorphous solid. Arsenic pentoxide decomposes at 315°C and is very soluble in water, 1500 g/liter (Oak Ridge 1976).

(c) Sodium Arsenate

Sodium arsenate is an inorganic arsenical wood preservative and insecticide. The chemical formula is Na_2HAsO_4; the molecular weight is 129.9, and the density is 1.9. It exists as a grey-white powder and is very soluble in water (Oak Ridge 1976).

(d) Sodium Pyroarsenate

Sodium pyroarsenate is an inorganic arsenical wood preservative. The chemical formula is $Na_4As_2O_7$; the molecular weight is 353.79, and the density is 2.2. It exists as white crystals and decomposes at 1,000°C. The melting point is 850°C. It is very soluble in water (Weast 1977).

(e) Lead Arsenate (Standard and Basic)

Lead arsenate, an inorganic arsenical insecticide, is manufactured from arsenic acid, which in turn is made from arsenic trioxide (EPA 1976b). There are two forms of lead arsenate, standard and basic. Standard (or acid) lead arsenate is the common name for acid orthoarsenate ($PbHAsO_4$). Basic lead arsenate is the common name for basic orthoarsenate ($Pb_4(PbOH)(AsO_4)_3$, which exists as a white crystal at 20°C. The molecular weight is 899.4, and the density is 7.8. Its melting point is 1,042°C, and it is very slightly soluble in water (Oak Ridge 1976). Lead arsenate is not decomposed as readily as other arsenicals and is less likely to be phytotoxic (Meister 1977). (See Section 1.1 for a discussion of the chronic effects of lead.)

(f) Calcium Arsenate

Calcium arsenate is an inorganic arsenical insecticide and herbicide, which, like lead arsenate, is formulated from arsenic acid (EPA 1976b). The chemical formula is $Ca_3(AsO_4)_2$. Its molecular weight is 398.1, and its density is 3.6. Its solubility in water is 0.13 g/liter (Oak Ridge 1976). Calcium arsenate is somewhat unstable. Although it contains no more water-soluble arsenic than lead

arsenate when freshly manufactured, the action of carbonic acid and dilute alkaline solutions decomposes calcium arsenate, liberating the water soluble form. As a result, it must be used with quantities of lime to avoid injury to some plants (Meister 1977).

(2) Trivalent Arsenicals

(a) Ammonium Arsenite

Ammonium arsenite (also ammonium metaarsenite) is an inorganic arsenical wood preservative. The chemical formula is NH_4AsO_2; its molecular weight is 125, and the density is 1.3. It forms colorless, hygroscopic rhombic prisms. It is very soluble in cold water and decomposes in hot water (Weast 1977).

(b) Arsenic Trioxide

Arsenic trioxide, an inorganic arsenical rodenticide, is the common name for arsenious (or arsenous) oxide; refined arsenic trioxide is known as white arsenic. The chemical formula is As_2O_3 [also As_4O_6]; the molecular weight is 197.8, and the density is 3.7. Arsenic trioxide exists as an amorphous white powder or vitreous solid with a boiling point of 465°C. It sublimes at 193°C, and its solubility in water is 20.6 g/liter (Oak Ridge 1976).

(c) Sodium Arsenite

Sodium arsenite is an inorganic arsenical herbicide and insecticide (Meister 1977). The chemical formula is $NaAsO_2$. Its molecular weight is 129.9, and its density is 1.9. It exists as a grey-white powder and is very soluble in water (Oak Ridge 1976). Sodium arsenite is the reaction product of arsenic trioxide plus sodium hydroxide.

(d) Copper Acetoarsenite (Paris Green)

Paris green is the common name for copper acetoarsenite, which is formulated from arsenic trioxide (EPA 1976b). The chemical formula is $Cu(C_2H_3O_2)\cdot 3Cu(AsO_2)_2$, and the molecular weight is 568.1. The compound exists as an emerald green powder. It is insoluble in cold water and alcohol, and soluble in acid and NH_4OH (Weast 1977). Although copper acetoarsenite contains the salt of an organic acid, it behaves chemically as an inorganic arsenical (Letter 1976).

F. Formulation and Class

Lead arsenate is an insecticide and is available in dusts, wettable powders, fertilizer mixtures, and baits. Calcium arsenate is an insecticide and herbicide; it is available in dusts, wettable powders, baits, high water suspensions, and granules. Sodium arsenite

is a herbicide and insecticide; it is available in aqueous solutions at strengths of 4, 6, 8, and 9 1/2 pounds/gal. Paris green is an insecticide and is available in 5% granules. Arsenic acid is a cotton desiccant and herbicide, available as a 75% water miscible solution. Ammonium arsenite is a wood preservative and is available as a 7.7% pressurized formulation with other ingredients. (Pressurized formulations are manufactured for use in pressurized wood-treatment systems.) Arsenic trioxide is used as a rodenticide and is available as a bait formulation. Arsenic pentoxide and arsenic trioxide are used as wood preservatives and antifouling paints and are available as 1.5 and 37.0% pressurized formulations with other ingredients. Sodium pyroarsenate is a wood preservative and is available as a 6.2% pressurized formulation with other ingredients. Sodium arsenate is an insecticide and wood preservative and is available as a 43% dust, a 2% solution, and 14 to 43.5% pressurized formulations with other ingredients, and 0.7 to 3% baits (Meister 1977; EPA 1975).

C. Registered Uses and Production

Several inorganic arsenicals have long been used as pesticides. Copper acetoarsenite was used against the potato beetle in the Rocky Mountain region as early as 1865. Lead arsenate was introduced as an insecticide against the gypsy moth in Massachusetts in 1892. Sodium arsenite was used both as an insecticide and as a weed killer (HEW 1969).

Table 1 shows the number of companies holding Federal registrations for the various inorganic arsenicals or who have state registrations for such pesticides, and filed timely applications for federal registration pursuant to 40 CFR 162.17.[1/]

Table 1.

Registration	Product	Companies	Products
Federal	Standard Lead Arsenate	23	53
State	Standard Lead Arsenate	5	6
Federal	Basic Lead Arsenate	3	3
State	Basic Lead Arsenate	1	1
Federal	Copper Acetoarsenite	7	11
State	Copper Acetoarsenite	1	1
Federal	Calcium Arsenate	17	32
State	Calcium Arsenate	2	3
Federal	Sodium Arsenite	58	75
State	Sodium Arsenite	9	10
Federal	Ammonium Arsenite	2	2
Federal	Arsenic Trioxide	19	24
State	Arsenic Trioxide	3	5
Federal	Sodium Arsenate	15	20
State	Sodium Arsenate	2	2
Federal	Arsenic Acid	9	18
Federal	Arsenic Pentoxide	6	14
State	Arsenic Pentoxide	2	2
Federal	Sodium Pyroarsenate	1	1

1/ Prior to the enactment of the 1972 amendments to FIFRA, federal registration was required only to ship or distribute a pesticide in interstate commerce. The 1972 amendments to FIFRA extended the federal registration requirement to products in intrastate commerce. In implementing the 1972 amendments, EPA permitted persons with valid state registrations to continue to sell and distribute their products, provided that timely application for federal registration was filed, and that other requirements set out in 40 CFR 162.17 were satisfied.

A total of 283 inorganic arsenic products are registered under Federal and state regulations. A registrant who has registrations for more than one type of arsenic (or who holds both Federal and state registrations for one or more types of arsenic) would be listed more than once.

Approximately 69% of all arsenic and its inorganic compounds produced in the U.S. is used for insecticides and herbicides. Over half of this amount is used by the cotton production industry as herbicides and desiccants for the preparation of cotton prior to machine picking. Another 7% of the total production is used as wood preservatives (OSHA 1977).

Most domestic arsenic production is in the form of arsenic trioxide which is derived from collected flue dusts from copper smelting. Since 1959, the entire U.S. production of arsenic trioxide has been at the Tacoma, Washington plant of the American Smelting and Refining Company (EPA 1976b). Arsenic trioxide is used to manufacture approximately 97% of other arsenic end-products (OSHA 1977). Since there is a single manufacturer for this material, recent production figures cannot be released. Section 7(c) of FIFRA requires manufacturers and formulators to submit to the U.S. Environmental Protection Agency (EPA) information on the production, sales, and distribution of their pesticide products. This information is confidential and may be released only in accordance with the procedures outlined in Section 7(d) and 10 of FIFRA. A confidential memorandum summarizing this information has been sent to the Deputy Assistant Administrator for Pesticide Programs (Memo 1978a). Production figures are available, however, through 1968. For the ten-year period 1958 through 1968, production of arsenic trioxide averaged 4,745 metric tons/year.[2/] The lowest production figure was 2,340 metric tons/year in 1959, and the highest was 7,000 metric tons/year in 1965 (EPA 1976b).

From 1965 through 1972, the average consumption of lead arsenate as an insecticide on crops and for other uses was 3,500 metric tons/year, or 1,100 metric tons/year in equivalent arsenic trioxide; for calcium arsenate, the figures were 900 and 450 metric tons/year, respectively; and for copper acetoarsenite, they were 7,300 and 4,000 metric tons/year, respectively (EPA 1976b).

Use of arsenic acid as a desiccant on cotton has increased steadily since the late 1960s, from 965 metric tons/year in 1968 to 4,400 metric tons/year in 1974 (EPA 1976b).

2/ A metric ton equals 1,000 kilograms or 2,204.62 pounds.

The "National Study of Agricultural, Governmental and Industrial Uses of Pesticides" (Memo 1977c), conducted by EPA's Human Effects Monitoring Branch, provided data on the patterns of use of the following inorganic arsenicals for 1974: for calcium arsenate, 1,840 pounds active ingredient (AI) were used in agriculture on fruit and nuts, 44b pounds AI in government (use by Federal, state, and local governments), and 33 pounds AI in industry (use by pest control operators, utility companies, etc.); for copper acetoarsenite, 18,998 pounds AI were used in government, and 50 pounds AI in industry; for lead arsenate, 53,627 pounds AI were used in industry, 2,106 pounds AI in government, and a total of 333,788 pounds AI in agriculture (333,329 pounds on fruit and nuts, and 459 pounds on ornamentals and miscellaneous); for sodium arsenite, 20,287 pounds AI were used in government, 237,820 pounds AI in industry, and a total of 86,660 pounds AI in agriculture (57,344 pounds on fruit and nuts, and 29,316 pounds on ornamentals and miscellaneous).

The National Soils Monitoring Program (Memo 1977a), conducted by EPA's Ecological Monitoring Branch, has collected data on the application of inorganic arsenicals to various representative cropland sampling sites through 1974. The data indicated a limited use (<1%) of inorganic arsenicals (Table 2). Among the crops to which these inorganic arsenicals were applied were grapes, apples, oranges, peaches, potatoes, dewberries, and cotton.

Table 2.

Compound	Fiscal Year	Sites Sampled	% Sampled	Avg Total Application (pounds/acre)
Calcium Arsenate	1970	1/1,346	0.07	9.8
Sodium Arsenite	1969	4/1,684	0.24	5.25
	1974	1/1,165	0.1	16.5
Lead Arsenate	1969	1/1,684	0.06	3.8
	1970	1/1,346	0.07	6.4
	1972	3/1,473	0.2	7.07
	1973	1/1,402	0.1	4
	1974	1/1,165	0.1	7.68
Arsenic Pentoxide	1972	2/1,473	0.14	0.5

D. Tolerances

Copper acetoarsenite, ammonium arsenite, sodium pyroarsenate, arsenic pentoxide, and arsenic trioxide have no agricultural uses.

(1) Arsenic Acid

A tolerance for residues of orthoarsenic acid (arsenic acid) is listed in 40 CFR 180.180 as follows: 4 ppm (as combined AS_2O_3) in or on the raw agricultural commodity cottonseed.

(2) Calcium Arsenate

A tolerance for total residues of calcium arsenate is listed in 40 CFR 180.192 as follows: 3.5 parts per million (ppm) of combined As_2O_3 in or on asparagus, beans, blackberries, blueberries (huckleberries), boysenberries, broccoli, brussels sprouts, cabbage, carrots, cauliflower, celery, collards, corn, cucumbers, dewberries, eggplants, kale, kohlrabi, loganberries, melons, peppers, pumpkins, raspberries, rutabagas (with or without tops) or rutabaga tops, spinach, squash, strawberries, summer squash, tomatoes, turnips (with or without tops) or turnip greens, and youngberries.

(3) Lead Arsenate

Tolerances for total residues of lead arsenate are listed in 40 CFR 180.194 as follow: 7 ppm of combined lead in or on apples, apricots, asparagus, avocados, blackberries, blueberries (huckleberries), boysenberries, celery, cherries, cranberries, currants, dewberries, eggplants, gooseberries, grapes, loganberries, mangoes, nectarines, peaches, pears, peppers, plums (fresh prunes), quinces, raspberries, strawberries, tomatoes, and youngberries; and 1 ppm of combined lead in or on citrus fruits.

(4) Sodium Arsenate

A tolerance for residues of sodium arsenate (combined As_2O_3) is listed in 40 CFR 180.196 as follows: 3.5 ppm in or on grapes.

(5) Sodium Arsenite

Tolerances for residues of sodium arsenite (expressed as As_2O_3) resulting from dermal application to animals under the supervision of the U.S. Department of Agriculture (USDA) are listed in 40 CFR 180.335 as follow: 2.7 ppm in kidney and liver of cattle and horses; and 0.7 ppm in the meat, fat, and meat byproducts (except kidney and liver) of cattle and horses.

USDA will issue a certificate to the owner of the animals showing the composition of the pesticide formulation and dates of treatment, and also specifying a minimum preslaughter interval of 14 days. In addition, 40 CFR 180.319 lists an interim tolerance for sodium arsenite of 0.05 ppm on grapes.

E. Fate in the Biological Environment

(1) Absorption

(a) Microorganisms

Microorganisms take up arsenates and arsenites via the phosphate transport system. Both arsenate and phosphate have an affinity for the transport system of yeast. Rothstein (1963) showed arsenate was taken up rapidly by bakers' yeast cells, but uptake then decreased and stopped within 40 minutes. Although arsenate and phosphate competed for the same transport system, phosphate was taken up twice as fast. Button and Dunker (1971) found that marine yeast accumulated

arsenate and phosphate through the same active transport system. Arsenate inhibited phosphate transport, and phosphate competitively reduced arsenate uptake.

Arsenic transport into bacterial cells (Escherichia coli) also involves the phosphate transport system. Bennett and Malamy (1970) found that a wild type of E. coli took up labeled arsenate in the absence of inorganic phosphate. If phosphate was then added, there was a rapid efflux of previously accumulated arsenate.

(b) Plants

Plants can absorb arsenical compounds from soil, water, and air through stomates, the cuticle (slow action), and cell membranes of roots, shoots, and coleoptiles. Exposure of plants to arsenic is from polluted air, pesticide-contaminated soil and water, and from naturally occurring deposits. Arsenic uptake is influenced by factors such as plant species, arsenical form, soil type, organic matter content, and ions present in soil (P, Ca, Al, Fe, Se, S). [See also Section I.E.(4)].

Sachs and Michael (1971) studied absorption of inorganic arsenic (sodium arsenite, sodium arsenate) and of organic arsenic (cacodylic acid, monosodium methane arsonate) by bean roots (Phaseolus vulgaris). When foliarly applied,

organic forms were translocated through the plant, while the inorganics were not. Both inorganic forms were more rapidly absorbed by bean roots than were the organics.

Soils have widely differing characteristics such as pH, oxide content, organic matter, and texture that affect the level of water-soluble arsenic in the soil (Walsh and Keeney 1975) [see also Section I.F.(1)(a)]. Woolson et al. (1971b) reported that the chemical form and solubility of the soil arsenic have more impact on plant growth than the total arsenic content of the soil. Translocation of arsenic is more extensive in warmer temperatures for most plant species.

The uptake of arsenic by plants (Table 3) is influenced by the soil elements and the plant species (Oak Ridge 1976). There is also competition between arsenic and phosphorous [see Section I.F.(1)(a)]. Rumburg et al. (1960) found that increasing the concentration of phosphorous in a nutrient solution decreased the amount of arsenate taken up by Clinton oats (Avena sativa). Jacobs and Keeney (1970) reported that phosphorus levels had little effect on uptake of arsenic by corn (Zea mays) grown in Waupun silt loam (80 ppm arsenic).

Table 3. Effects of Other Elements on Uptake of Arsenic by Plants

Plant	Other element	Effect of other ion on arsenic concentration	Reference
Clinton oats (Avena sativa)	Phosphorus	Decrease	Rumburg et al. (1960)
Corn (Zea mays)	Phosphorus	Increase in sand, little effect in silt loam	Jacobs and Keeney (1970)
Tobacco (Hicks variety)	Phosphorus	Increase	Small and McCants (1962)
Corn (Zea mays)	Calcium	Decrease	Woolson (1972)
Barley	Calcium	Little or no effect	Vandecaveye et al. (1936)
Plants (in general)	Aluminum	Decrease	Walsh and Keeney (1975)
Barley	Iron	Decrease	Vandecaveye et al. (1936)
Potatoes	Iron	Decrease	Steevens et al. (1972b)
Tobacco (Hicks variety)	Iron	Decrease	Small and McCants (1962)
Grasses, sunflower	Selenium	No correlation	Olson et al. (1940)
Rice	Sulfur	Decrease	Epps and Sturgis (1939)

(c) Animals

Insects, aquatic organisms, birds, and mammals generally take in arsenic by ingestion.

The manner of arsenic uptake by marine organisms is unknown (Penrose 1974). Fish feeding on arsenic-containing organisms probably obtain some arsenic by ingestion. Arsenic may be absorbed by crustaceans and by fish through the gills, as are other metals in the aquatic environment. Inorganic arsenic may be taken in with food and metabolized to water-soluble and lipid-soluble organoarsenical compounds (Schuth et al. 1974). Inorganic arsenic in water may be directly absorbed by fish.

Arsenic has been found in fish and aquatic invertebrates in both fresh and salt water [see Section I.E.(4)]. Aquatic organisms bioaccumulate arsenic but do not biomagnify it (Woolson 1975). They apparently are able to eliminate arsenic at approximately the same rate as it is ingested. In some cases, however, arsenic is found at higher concentrations in organisms than in the surrounding water. Gilderhus (1966) exposed bluegills to various concentrations of sodium arsenite. Arsenic residues were found in all tissues analyzed. Arsenic levels in fish increased during the exposure period and were higher in fish than in the water at the end of exposure.

Arsenic uptake by wild birds is primarily through ingestion of feed contaminated with residues of arsenical pesticides (Oak Ridge 1976).

Almost all arsenic uptake by mammals is through ingestion. Wildlife can take in arsenic by feeding in areas that have been contaminated with arsenical herbicides. Arsenic can also be absorbed through skin abrasions in sheep, cattle, and horses (Case 1974). Studies in mammals indicate that absorption of inorganic arsenic through the gastrointestinal tract can result in alteration of the chemical form (i.e., by methylation) before it reaches the general circulatory system and other organs.

(d) Humans

Arsenic can enter the body by ingestion, inhalation, and absorption through the skin. Several factors affect absorption, such as water solubility, lipid-solubility, type of arsenical, and area of absorption. Skin absorption is also dependent on the lipid-solubility of the compound. Lipid-insoluble arsenic salts are capable of combining with fatty acids in the skin to form lipid-soluble metal oleates which the skin is capable of absorbing (Rothman 1954). Oehme (1972) reported that inorganic arsenic is absorbed significantly through intact skin. Trivalent arsenicals are generally absorbed through the skin more readily than the pentavalent forms. Pentavalent inorganic arsenicals are better absorbed than trivalent forms in the digestive tract, probably because they react less with the intestinal contents and mucosa (Harvey 1975).

(2) Distribution

(a) Plants

Plant roots usually have the highest content of arsenic; vegetative growth has an intermediate level; and edible seeds of fruits contain the lowest levels (Walsh and Keeney 1975).

Machlis (1941) grew Sudan grass (Sorghum vulgare, var. sudanense) and bush bean (Phaseolus vulgaris var. humilis) in the greenhouse for varying lengths of time in nutrient solutions containing various concentrations of sodium arsenite. Leaves contained the highest arsenic concentrations, stem tissues contained an intermediate amount, and reproductive structures contained the least amount of arsenic. Concentrations many times greater than those of the leaves or nodes were observed in Sudan grass roots after they were placed in arsenic-containing nutrient solutions for one week (1 to 18 ppm arsenic in solution resulted in 338 to 1,461 ppm arsenic in roots). Sudan grass was more arsenic-resistant than the sensitive bean species.

Watanabe et al. (1971) reported that low levels (<0.10 ppm) of arsenic were detected in fruit from eggplant grown in soil treated with 20 ml of arsenious acid (equivalent to 20 mg of arsenic per plant). Roots and leaves showed the highest arsenic concentrations (1.35 and 0.85 ppm, respectively) when 12.0 ppm arsenic was found in the upper layer of the soil.

Geisman et al. (1969) determined the concentration of arsenic in tomato plants grown under greenhouse conditions in soils that had been treated for at least two years with a sodium arsenite solution. Plants were grown on treated and drift portions of the plot and untreated controls were grown in a separate area. Table 4 shows that the highest arsenic concentrations were found in the roots and the lowest concentrations were found in the fruit.

Table 4. Average Arsenic Concentrations Found in Treated and Untreated Soil and Plant Samples (dry weight basis)

Treatment	Average Arsenic Concentration (ppm)[a/] Soil	Roots	Stems and Leaves	Fruit
Untreated	<0.2	<0.2	<0.2	<0.2
Drift	331.0	400.0	187.0	<0.2
Treated	654.0	1707.0	334.0	1.4

a/ Data from Geisman et al. (1969).

Experiments with the lowbush blueberry (Vaccinium angustifolium) grown in commercial and virgin soils revealed a correlation between soil arsenic and arsenic in plant tissue (Anastasia and Kender 1973). Arsenic trioxide solutions of various concentrations were used to irrigate the soil. Analysis of arsenic content of leaves, stems, and roots indicted that roots absorb and translocate arsenic into the aerial organs (see Table 5). The greatest arsenic concentration was found in roots; stem concentration was slightly higher than leaf concentration. Tissue arsenic concentration increased as soil arsenic increased.

Table 5. Arsenic Accumulation in Leaves, Stems, and Roots of Lowbush Blueberry Plants Grown at Five Arsenic Levels in the Greenhouse for 17 weeks[a/]

Total soil arsenic (ppm)	Arsenic content (ppm) Leaves	Stems	Roots
7.7 (control)	0.78	0.27	2.40
17.1	3.55	3.95	50.02
43.8	6.74	7.58	93.72
89.5	8.14	11.64	121.28
84.5	14.97	13.33	164.22
LSD (0.05)[b/]	5.05	6.03	43.53

a/ Mean of three clones; data from Anastasia and Kender (1973).
b/ Test for significance of mean differences.

(b) Humans and Animals

According to Webb (1966), four major factors influence distribution of arsenic in animals: type of arsenical, animal species, route of administration, and time after administration.

With the exception of the rat, inorganic arsenic injected into mammals tends to concentrate in the solid tissues more than in the blood. Generally, the highest concentrations are in the liver, kidney, spleen, and lung. Trivalent arsenic will bind to sulfhydryl groups in animal tissue and slowly be released, while pentavalent forms are rapidly eliminated via the feces and urine. High concentrations of arsenic are found in hair and nails because it reacts with the sulfhydryl groups in the keratin (Harvey 1975).

Arsenic is a normal environmental contaminant and is always present in human tissues (Rentoul and Smith 1973). The total arsenic content of a normal adult body is estimated to be 14 to 21 mg (Harvey 1975).

In a study by Mealey et al. (1959), eleven patients dying of intracranial disease were given radioactively labeled trivalent arsenic intravenously. In a post-mortem examination, organs and tissues were analyzed for activity. The liver, kidneys, and spleen were the primary sites of arsenic accumulation.

In guinea pigs, rabbits, apes, and humans, radioactively labeled potassium arsenite was injected subcutaneously and was distributed primarily in skeletal muscles (Hunter et al. 1942).

Ducoff et al. (1948) studied the distribution of arsenic residues in various species of mammals, including humans, with radioactively labeled sodium arsenite (^{74}As). Eight Sprague-Dawley male rats were injected intravenously with 47 microcuries (uCi) each and were sacrificed in pairs at 6, 24, 48, and 96 hours. The authors noted the high concentration of arsenic in the blood, fairly high arsenic content of lung and spleen, the large individual variation, and the lack of any great tendency for a decline in the arsenic content of most tissues. The distribution of arsenic residues in four rabbits showed that concentrations of arsenic in blood at any time interval were never as great as in most solid tissues, that all tissues showed a distinct reduction in arsenic content over time, and that liver, kidney, and lungs contained the highest concentrations of arsenic.

The same authors also studied arsenic distribution in mice and humans. In a study on mice, 19 males of the A strain, 11 bearing lymphomas that had been transplanted three weeks previously, were injected intraperitoneally with 0.8 uCi radio-labeled sodium arsenite each. Arsenic concentration was determined in tissue samples of kidney, liver, lung, spleen, muscle, and tumor (when these were present). The ratio of arsenic concentration in kidney, liver, and

spleen of healthy inbred mice was found to be fairly constant for a given time after administration. Using this ratio as a criterion, it was found that arsenic distribution in tissues was altered unpredictably by the presence of transplanted tumors.

In the residue study on humans, a moribund 65-year-old female with carcinoma of the parotid (salivary gland) was given 500 microcuries (uCi) of ^{76}As (equivalent to 4 mg arsenic) 20 hours before death. The tissue distribution (in uCi/g) at time of death was as follows: liver, 46.4; kidney, 29.5; spleen, 16.1; parotid tumor, 15.6; heart, 14.6; heart, 14.6; jejunum, 14.3; vertebral marrow, 14.2; mesenteric lymph node, 12.8; stomach, 11.7; pancreas, 11.6; muscle (quadriceps), [illegible]; ileum, 11.1; lung, 10.8; femoral marrow, 10.8; adrenal, 8.5; ovary, 8.3; thyroid, 7.6; skin, 6.7; brain, 2.5; and femoral cortical bone, 2.4.

In livers of fish from the Great Lakes, Lucas et al. (1970) found concentrations of arsenic ranging from 5.6 to 80 ppb. The arsenic was primarily in the fat fraction of the liver and other organs. Fish generally contain lower arsenic levels than other aquatic organisms (Lunde 1970).

(3) Excretion and Degradation in Animals

Webb (1966) has noted that arsenicals are excreted at different rates, depending on the valence state. The pentavalent arsenicals are usually excreted rapidly by the

kidney since they do not bind readily to tissues, whereas the trivalent arsenicals become rapidly bound and are excreted only as fast as they are released.

Mealey et al. (1959) suggested that arsenite administered intravenously into humans is excreted in three phases. More than 99% of a radio-labeled dose of sodium arsenite was excreted within 15 hours after administration. Labeled arsenic was excreted at a low, constant rate over the next 155 hours, and the remainder was removed at an even lower rate. Chemical tests of the urine indicate that the labeled arsenite is recovered as a mixture of arsenite and arsenate, the latter predominating.

Winkler (1962) showed that rats fed either sodium arsenite or sodium arsenate excreted primarily pentavalent arsenic, indicating in vivo oxidation of arsenite.

Harvey (1975) states that trivalent arsenic is slowly excreted in the urine and that this is the basis for its cumulative toxic action. Arsenate forms are rapidly excreted in humans and therefore little arsenic accumulates.

Coulson et al. (1935) studied the excretion of shrimp-arsenic (an organo-arsenical found in shrimp) in comparison to that of inorganic arsenic trioxide

(trivalent arsenical) in rats and humans. The "normal" level of arsenic excretion was determined for rats. Two groups of rats given a stock (no arsenic) diet excreted an average of 0.0059 and 0.0065 mg arsenic, respectively, in the urine (80%) and feces (20%). Rats in the first group were then fed a diet containing shrimp-arsenic for one day. Within four days, 74.6% of the arsenic had been recovered, and arsenic excretion fell to normal levels. The second group, however, which consumed a diet containing arsenic trioxide, eliminated only 19.1% of the ingested dose before arsenic excretion fell to normal levels; 80% was retained in the body. The experiment was repeated one week later with the first group of rats receiving the inorganic arsenic and the second receiving the organic shrimp-arsenic; the results were the same.

The same authors conducted a similar experiment on two humans. When the two subjects were given shrimp-arsenic in their diet, the rate of elimination was about the same as in the rat. When inorganic arsenic (As_2O_3) was added to the diet, it was excreted more slowly than the shrimp arsenic had been but was eliminated more completely than in rats.

Peoples (1964) studied the rate of urinary excretion of arsenic acid, a pentavalent arsenical, in cattle. Two animals received daily doses of 11.6 mg arsenic acid in the feed supplement for seven weeks;

two received 58.2 mg, and two received 291.0 mg. After seven weeks, the two low-dose animals had excreted 7% and 86% of the total arsenic ingested; the two mid-dose animals had excreted 79 and 58%; and the two high-dose animals had excreted 51 and 98%. The author suggested that the high levels of excreted arsenic indicated there is little arsenic storage in cattle tissue. The author indicated that preliminary studies showed that the tissue-bound arsenic was entirely pentavalent with no evidence of reduction to the trivalent form.

Lakso and Peoples (1975) fed sodium arsenate and sodium arsenite to cows and dogs for five consecutive days. Regardless of the arsenic form ingested, both animals excreted approximately equal amounts of methylated and inorganic arsenic. Crecelius (1977b) observed similar results when studying changes in the chemical speciation of arsenic following ingestion by man (see Section I.J).

Ginsburg (1955) reported that arsenate, given intravenously to dogs, was reabsorbed by the proximal renal tubule and reexcreted as arsenite (see Section I.J).

Ducoff et al. (1948) studied the excretion of radio-labeled sodium arsenite (a trivalent arsenical) in rats, rabbits, and humans. Five male Sprague-Dawley rats were each injected with 47 microcuries (uCi) of radio-labeled sodium arsenite (^{74}As), four rabbits were each injected with 235 uCi, and 2 human subjects were injected with 3.0 and 2.7 millicuries, respectively. The results showed

that, during comparable time intervals, arsenic excretion took place more slowly in the rats (<10% during the first 48 hours) than in rabbits (about 70%) or humans (about 30 to 45%). The authors also noted that the arsenic content of rats rapidly reached equilibrium. For all species, less than 10% of the excreted arsenic was found in the feces.

Fairhall and Neal (1938) studied the excretion of lead arsenate, a pentavalent arsenical, in two human subjects. After a preliminary period of three days on a controlled diet, both subjects received 10 mg of lead arsenate daily for ten days. Arsenic residues in urine and feces were measured for 23 days starting with the first day of exposure. The results showed that the arsenic was eliminated only through the kidneys. (Total arsenic residues in feces were only a few hundredths of a milligram.) About 96.4% of the arsenic was excreted in urine in the first subject, and about 77.5% in the second. The authors interpreted the immediate excretion of most of the ingested arsenic as evidence that lead arsenate dissociates in the gastrointestinal tract, even though its solubility in water is low.

Webster (1941) studied the excretion of lead arsenate in nine adult male orchardists who customarily ate unwashed apples treated with lead arsenate. During the 10-to-12-day experimental period, the subjects ate their usual number of treated apples (average, three apples) from separately provided lots. Analyses of samples of fruit eaten by the men showed a potential arsenic intake of 1 to 20 mg of lead

and 0.34 to 6.8 mg of arsenic per person per day. A portion of each day's urine and the total daily feces were analyzed for arsenic residues. The average arsenic residues for all nine persons over the experimental period was 0.019 mg in urine and 2.66 mg in feces. The total fecal arsenic was about 15% greater than the total urinary arsenic. The author compared this result with that obtained by Fairhall and Neal (1938) and suggested that the different results were caused either by differences between the chemical and physical properties of weathered spray residue and pure lead arsenate, or by differences in excretion of arsenic by persons having chronic exposure and those having acute exposure.

(4) Bioaccumulation and Biomagnification

The terms bioaccumulation and biomagnification are not treated consistently in scientific literature and are sometimes used interchangeably. For purposes of this document, however, bioaccumulation means the accumulation or concentration of pesticide residues in individual organisms or in individual species. Biomagnification, on the other hand, means the transference of pesticide residues from lower to higher organisms in the food chain, resulting in greater (magnified) concentrations of pesticide residues in higher organisms than were present in the lower forms.

Arsenic does not appear to biomagnify through the food chain (Oak Ridge 1976).

Arsenic does not continuously accumulate in mammalian tissues because it apparently reaches dynamic equilibrium

between intake and excretion (Frost 1967). Variations in the excretion rates of the different arsenicals by mammals are believed to be the basis for the varying toxicities (Frost 1967). The average human body burden of arsenic in normal adults is 14 to 21 mg (Harvey 1975); this arsenic is stored primarily in the liver, kidney, wall of the gastrointestinal tract, spleen, and lung, while smaller amounts are found in the muscle and nervous tissue. High levels of arsenic are also found in human hair and nails due to the high sulfhydryl content of keratin.

Since arsenic occurs naturally in aquatic systems, many aquatic organisms tend to bioaccumulate it. Due to the higher concentration of arsenic in salt water, marine organisms (plant and animal) tend to accumulate arsenic to a greater extent than freshwater forms (Woolson 1975). The highest rates of arsenic accumulation are found in aquatic plants (Woolson 1975). The lower aquatic organisms usually have the highest arsenic residues. Sohacki (1968) found plankton to be an effective accumulator of arsenic. Schuth et al. (1974) showed that there was greater arsenic accumulation by aquatic organisms such as algae and duckweed (lower level of food chain) than in fish and crayfish (upper level of food chain). In a review of the literature, Schroeder and Balassa (1966) reported that levels of arsenic are much higher in marine plants and animals than in terrestrial forms.

Ullmann et al. (1961) studied arsenic bioaccumulation by fish in Findley and Chautauqua Lakes in New York, which

were treated annually since 1956 with sodium arsenite for weed control. Detectable quantities of arsenic were found in the fillets (including skin) of all fish from Findley Lake, ranging from 0.27 to 0.47 ug/g. Seven of eight fish contained arsenic in the viscera (including bone and scales), ranging from 0.10 to 0.78 ug/g. No significant differences occurred between fish taken before or after spraying in either of the treated lakes. The fish from Chautauqua Lake contained less arsenic than those from Findley. Nine of 20 fish contained arsenic in the fillets ranging from 0.10 to 0.28 ug/g. Seven contained arsenic in the viscera ranging from 0.10 to 0.29 ug/g. These values were only slightly higher than those obtained in the ten control fish from untreated (control) Cassadaga Lake. Six of these contained from 0.10 to 0.12 ug/g in the viscera, and five contained from 0.10 to 0.14 ug/g in the fillets.

Terrestrial plants can bioaccumulate arsenic [see Section I.E.(2)(a)]. Since most plants are sensitive to arsenic, there is a reduction in growth before a high level of arsenic can occur (Walsh and Keeney 1975). [See also Sections I.E.(2)(a) and (6)].

Plants growing near a copper smelter were found to contain increased arsenic levels as a result of soil contamination with arsenic (Crecelius et al. 1974). Porter and Peterson (1975) measured the arsenic content of plants grown in contaminated soils (i.e., mine tips, and areas of smelter

waste). The foliage of several species contained 460 to 6,640 ppm, while plants in areas away from the smelter contained 0.28 to 0.33 ppm of arsenic.

Biotransformation

In soil, sediment, and water, transformation is usually mediated by microorganisms. Various fungi and bacteria, under aerobic and anaerobic conditions, can metabolize arsenate and arsenite to volatile arsenicals, usually to di- or trimethyl arsine (Braman 1975; Walsh and Keeney 1975). The trivalent form of arsenic does not persist for long periods in well-aerated soils with significant biological activity (Walsh and Keeney 1975).

Limnetic and marine unicellular algae were able to synthesize fat- and water-soluble arseno-organic compounds from inorganic arsenic ions added to growth media (Lunde 1973b). A greater quantity of lipid-soluble organic compounds were synthesized in cultures with arsenate compared to those with arsenite.

Lunde (1969; 1972; 1973a; and 1973b) has demonstrated that arsenic is present in algae, fish, benthic organisms, and phyto- and zooplankton as water-soluble and lipid-soluble arseno-organic compounds. Studies indicate that arsenate is not a major form of arsenic in aquatic organisms (Woolson 1975).

Several studies of arsenic transformation in humans and animals have been done (see Sections I.E.(3) and I.J). Since the valence state of arsenic largely determines its toxicity, knowledge of the conversion *in vivo* is important. Most authors generally agree that trivalent arsenic is oxidized in tissues and excreted (at least in urine) in a pentavalent form; the reverse transformation, reduction of pentavalent arsenic, is not the favored reaction (see Section I.J).

(6) Other Biological Aspects

(a) Beneficial Effects in Mammals

Arsenic in small amounts may be essential and beneficial to cell metabolism. Attempts to confirm this have been hindered by the ubiquity of arsenic, which makes it difficult to obtain arsenic-free diets.

Muth et al. (1971) found that the addition of 1 ppm of sodium arsenate to selenium-deficient food reduced the incidence of myopathy in lambs. However, attempts have failed to show beneficial effects of arsenic in other selenium-deficiency diseases.

Nielsen et al. (1975) found symptoms of arsenic deficiency in rats fed a diet containing only 30 ppb of arsenic. Male rats had rough haircoats, a low rate of growth, splenomegaly, decreased hematocrit, and increased

osmotic fragility of red blood cells. Anke et al. (1976) found similar deficiencies in goats and laboratory pigs fed diets containing less than 50 ppb of arsenic. Compared to the control animals that received food supplemented with 350 ppb of arsenic, the experimental animals had impaired reproductive performance, decreased fetal weights, and increased neonatal mortality.

(b) Phytotoxicity

For many years, inorganic arsenicals have been used as pesticides, herbicides, and plant defoliants. As a result, plant growth has been reduced in some areas previously used for orchards and cotton fields (Walsh and Keeney 1975).

An example of severe phytotoxicity due to arsenic accumulation in the soil occurs in old orchard fields which are recycled for other crop uses (Bishop and Chisholm 1962; Vandecaveye et al. 1936). Some orchards have received over 1,000 kg/ha of arsenic while only 10 kg/ha were used as a defoliant in potato fields (Walsh and Keeney 1975).

Symptoms of arsenic phytotoxicity may vary with the plant variety, type of arsenical, method of application, and environmental conditions (Woolson et al. 1971b) [see also Section I.E.(1)(b) and I.F.(1)(a)]. Young tissue is generally more susceptible to injury than older tissue. Trivalent forms are more toxic than pentavalent forms and can bind with sulfhydryl groups, thus interfering with many enzymatic reactions. Arsenites usually produce rapid contact injury to membranes, which results in rapid water loss. Arsenates cause more subtle symptoms (chlorosis, but not loss of turgor), uncouple oxidative phosphorylation, and

stimulate respiration. They may react in the place of phosphates in many reactions (Ashton and Crafts 1973).

Reduced plant growth in corn (Zea mays) was associated with high concentrations of available arsenic in the soil (Woolson et al. 1971b). The authors indicated that the phytotoxicity of arsenic was influenced more by chemical form than by amount. Water-soluble arsenic was more toxic than water-insoluble arsenic. Reduced phytotoxicity occurred in soils containing arsenic and high levels of reactive aluminum versus soils containing arsenic and low levels of reactive aluminum.

Other studies have shown that arsenic can retard plant growth and transpiration (Kerr 1941; Morris and Swingle 1927; and Woolson 1973).

Table 6 gives the toxic levels of soluble arsenic for various crops.

Table 6. Toxic Levels of Soluble Arsenic to Various Crops and Vegetables

Plant	Toxic level Soluble As (ppm)	Reference
cowpeas	1	Albert and Arndt (1931)
barley	2	Vandecaveye (1943)
snap beans	2.5[a/]	Jacobs et al. (1970)
peas	2.5	Jacobs et al. (1970)
	9[a/]	Bishop and Chisholm (1962)
alfalfa	3.4-9.5	Vandecaveye et al. (1936)
soybeans	3-12	Deuel and Swoboda (1972)
rice	7	Epps and Sturgis (1939)
cotton	8-28	Deuel and Swoboda (1972)
beans	9	Bishop and Chisholm (1962)
corn	20[a/]	Jacobs et al. (1970)
potatoes	37[a/]	Jacobs et al. (1970)
green beans	10-50	Woolson (1973)
lima Beans	10-50[a/]	Woolson (1973)
spinach	10-50[a/]	Woolson (1973)
tomatoes	50[a/]	Woolson (1973)
radish	40-100[a/]	Woolson (1973)
lowbush blueberry	84.5	Anastasia and Kender (1973)
cabbage	100[a/]	Woolson (1973)

a/ Level which produces 50 percent yield reduction.

(c) Beneficial Effects in Plants

Although arsenic is not an essential plant nutrient, relatively high arsenic concentrations in soil may have beneficial effects on plant growth (Walsh and Keeney 1975). Stewart and Smith (1922) found that a concentration of 25 ppm in soil enhanced the growth of peas, radishes, wheat, and potatoes. However, beans showed a steady decrease in growth as the arsenic content increased. MacPhee et al. (1960) reported increased turnip yields in soil with a total arsenic content of 126 ppm. The increase in yield was attributed to control of the turnip root maggot. There was a decrease in the yield of other crops such as peas and beans.

There have been beneficial effects on several crops in fields treated with high concentrations of calcium arsenate. Decreased yields for vetch, oats, and barley were first noted in soil with total arsenic concentrations of 94, 188, and 283 ppm, respectively [calcium arsenate applied at 500, 1,000, and 1,500 pounds/acre] (Cooper et al. 1931). When calcium arsenate was applied below these levels, the treated soil had a higher yield than the untreated soils. In another study, corn, sorghum, soybeans, and cotton showed yield increases from applications of 188 ppm [1,000 pounds/acre] (Cooper et al. 1932).

Woolson et al. (1971a) postulated that the stimulation of growth in plants by small amounts of arsenic may be similar to that of other pesticides (e.g., 2,4-D) at sublethal dose levels.

F. Fate in the Physical Environment

(1) Distribution

(a) Soil

Arsenic occurs as a natural constituent in almost all soils. The earth's crust has an estimated background arsenic concentration of 6 ppm [range of 0.1 to 40 ppm] (Bowen 1966). Although there are several sources of inorganic arsenic (i.e., natural weathering of arsenic-containing rock, smelters, volcanic debris, and pesticides), residues from pesticides are a major source of arsenic pollution (Woolson 1976). They are also the major source of arsenic emitted to the environment, but the use of these products is now declining for various reasons (Sullivan 1969). Thirty-two percent (32%) of the total emissions in the U.S. of arsenic are from pesticide use (Duncan et al. 1973).

Williams and Whetstone (1940) sampled soils which had not been contaminated with arsenical pesticides. All samples contained from 0.3 to 38 ppm of arsenic (30% contained less than 5 ppm; 50%, 5 to 10 ppm; and 20%, greater than 10 ppm). Jones and Hatch (1945) compared four plots of soil, arsenic-treated and untreated, after 20 to 25 years of pesticide spraying. The arsenic content was 20 to 30 times the original level. Woolson et al. (1971a) surveyed soils in the U.S. with a history of arsenic treatment. The overall average residue level was 165 ppm, while in control soils it was 13 ppm.

Walsh and Keeney (1975) summarized the arsenic levels for treated and untreated soils in parts of North America. Untreated soils had an arsenic range from undetectable to 80 ppm, while treated soils ranged from 1 to 2,553 ppm (see Table 7).

Table 7. Comparison of Arsenic Levels in Arsenic-treated and Uncontaminated Soils in North America

Sampling site	Total arsenic content (ppm) Uncontaminated soil	Treated soil[a/]	Crop
Colorado	1.3-2.3	13-69	Orchard
Flordia	8	18-28	Potato
Idaho	0-10	138-204	Orchard
Indiana	2-4	56-250	Orchard
Maine	9	10-40	Blueberry
Maryland	19-41	21-238	Orchard
New Jersey	10	92-270	Orchard
New York	3-12	90-625	Orchard
North Carolina	4	1-5	Tobacco
Nova Scotia	0-7.9	10-124	Orchard
Ontario	1.1-8.6	10-121	Orchard
Oregon	2.9-14	17-439	Orchard
	3-32	4-103	Orchard
Washington	6-13	106-830	Orchard
	8-80	106-2553	Orchard
	4-13	48	Orchard
Wisconsin	2.2	26	Potato

a/ These are results from soils that had been repeatedly treated with an arsenic pesticide or defoliant. Soils treated experimentally are not included. Data from Walsh and Keeney (1975).

Greaves (1934) studied soils from 50 orchards and found that levels of arsenic varied from 26.4 to 1,353.3 kg/ha-m (7.2 to 367.2 pounds/acre-ft). Bishop and Chisholm (1962) compared surface soil from 25 orchards to soil from control (untreated) soils and found arsenic accumulation due to the use of pesticides. In Canada, Miles (1968) studied soil from four apple orchards. The arsenic level ranged from 10.2 to 107 ppm between the trees, and from 15.6 to 121 ppm under trees. Soil from untreated vegetable fields generally had under 10 ppm of arsenic.

Arsenic from smelter emissions can contaminate the surrounding soil. Crecelius et al. (1974) reported surface soil contamination of up to 380 ppm within a 16-mile distance from a smelter stack, with suspected contamination as far as 112 miles away. Ratsch (1974) reported arsenic

concentrations of 7.3 to 457 ppm within a 6-mile radius of a copper smelter.

Soil adsorption of arsenicals is dependent on soil pH, texture, iron and aluminum oxide content, phosphorous level, and the organic matter content (Woolson 1976). Arsenic that is adsorbed to soil or sediment is fixed as slightly soluble compounds (Woolson 1976). There is an equilibrium between the arsenic in solution and that fixed in the soil or sediment (Woolson 1976). Soluble arsenic is subject both to leaching, especially in sandy soil where there is little potential for forming adsorption complexes, and to removal by surface run-off to ground waters, lakes, and rivers.

Unlike heavy metals, there is decreased adsorption of arsenates in soils with high pH (Misra and Tiwari 1963). Depending on soil texture, soils adsorb arsenate in the following decreasing order: clay, clay loam, silt, loam, loam sand. Arsenic, like many heavy metals, is persistent in soils with a high concentration of hydrous oxides, especially those of iron and aluminum found in laterite, bauxite, and silicate soils. Arsenic is decreasingly reactive with Fe > Al > Ca > Mg, to form increasingly soluble salts (EPA 1976c). If levels of reactive Fe, Al, and exchangeable Ca are low, arsenic is more likely to leach (Woolson et al. 1971a). Because of chemical similarities, arsenate ions can compete with phosphate ions for adsorption to soil minerals. Fixed arsenate can be readily replaced in the presence of phosphate ions (Woolson 1972). Increasing calcium levels will decrease arsenate retention in soil.

Precipitation can affect the persistence of arsenic in soil. Over a period of years, arsenic will leach from

soil with adequate rainfall. With limited rainfall, however, arsenic can accumulate in soils where leaching occurs more slowly due to high iron and aluminum oxide content.

Arsenic in the soil can be removed naturally by volatilization (from biotransformation), leaching, wind-born dust, run-off, plant uptake, and crop removal.

(b) Water

Small quantities of arsenic occur in virtually all natural waters. Ground waters usually contain more arsenic than surface waters. Naturally occurring arsenic in sea water averages 0.003 ppm while rivers average about 0.0004 ppm (Bowen 1966). Elevated arsenic levels in water are usually the result of pollution. The average content of arsenic in fresh water (about 1.5 to 2 ug/liter) is below the recommended drinking water standards for the United States (Woolson 1975). Water near natural deposits of arsenic or areas of volcanic activity tend to have higher levels of arsenic.

Although there is disagreement among scientists as to the oxidation state of arsenic in sea water, it is agreed that there is an equilibrium between arsenate and arsenite forms (Woolson 1975). There are indications that, in the oxidizing layers of the ocean, arsenic is in the pentavalent state, while at lower depths it is reduced to the trivalent state (Woolson 1975). This equilibrium may also exist in stratified lakes.

The strong association of arsenic with clays high in iron and aluminum oxides is an important means of transferring arsenic to streams, lakes, and sediments [see Section I.F.(1)(a)]. Arsenic can enter natural waters by

run-off and leaching from arsenic-treated soils. The hydrous metal oxides in the sediments can adsorb the arsenic, removing it from solution, thereby preventing build-up of high concentrations (Woolson 1976). Sediments in polluted rivers have been found to contain up to 220 ppm of arsenic (Oak Ridge 1976).

Arsenic can be removed from solution by volatilization (as alkyl arsines), adsorption by clays and detritus, and coprecipitation with metal ions (Ferguson and Gavis 1972).

(c) Air

Arsenic in the atmosphere is primarily the result of human activities and, to a lesser extent, volcanic and bacterial action. There is generally low atmospheric arsenic except near local pollution sources such as metal smelters, cotton gins, and areas of pesticide application. The air of most U.S. cities contains a small amount of arsenic, while air in rural areas has a relatively low concentration of arsenic (Sullivan 1969).

Arsenic moves in air adsorbed to particulate matter, and it is returned to the soil by direct fallout or by precipitation (Woolson 1976). It has been hypothesized that volatile arsenicals released to the atmosphere are oxidized in the presence of light and returned to the soil via dry fall (as particulate matter) or in precipitation (Woolson and Kearney 1973).

(2) Degradation and Transformation

In nature, most arsenicals are converted to arsenate (pentavalent) which is the stable oxidation state in oxygenated environments. Arsenite (trivalent) is the dominant form in anaerobic conditions (i.e., flooded soils, submerged

sediment layers). Arsenate may be reduced to arsenite under conditions of low pH (Misra and Tiwari 1963). Arsenite will not persist for long periods in well-aerated soils with significant biological activity. Oxidation also occurs in alkaline soils or those containing ferric and aluminum oxides (Misra and Tiwari 1963).

In air, arsenic is transformed by abiotic oxidation (Lee et al. 1977). In the soil and water, transformation is usually mediated by organisms (Sandberg and Allen 1975). Trivalent forms (arsenite) can be oxidized to the pentavalent (arsenate) both abiotically and biotically. Pentavalent forms can be reduced anaerobically. Methylation occurs anaerobically and aerobically by many microbial species (Cox 1975).

In sea water, there is an equilibrium between arsenate and arsenite with the pentavalent form predominating (Woolson 1975). In the aerobic (oxidizing) layers of the ocean, the reduced forms of arsenic will be oxidized to arsenate. At lower ocean depths where oxidation is not as great, chemical or microbial reduction may occur (Robison 1975).

Both arsenates and arsenites can precipitate with ferric hydro-oxides in water (Woolson 1975). Ferric arsenates and arsenites can then accumulate in ocean sediments where solubilization as arsines, stabilization as sulfides, or reduction to arsenic metal can occur. Turbulence and convection can transport arsenates to lower oxygen-depleted depths where they may be reduced to arsenites or AsS_2 (Woolson 1975).

G. Residues

(1) Soil

Residual arsenic tends to be concentrated in the surface layers of the soil (Jones and Hatton 1945; Vandecaveye et al. 1950). With annual treatments of sodium arsenite, arsenic was reported to have accumulated to the extent that leaching equaled the addition of arsenic (Tammes and de Lint 1969).

EPA's National Soils Monitoring Program (Memo 1977a, 1977b) has limited data on noncropland (i.e., nonurban and nonagricultural) soil sampling for arsenic residues for fiscal year (FY) 1971 and 1972. In FY 1971, a total of 198 noncropland soil samples were analyzed from 11 states; 195 samples showed arsenic residues. In eight of the states, 100% of the sites showed arsenic residues, and in the other three 94.1, 96.7, and 97.3% of the sites showed arsenic residues. The lowest arithmetic mean for arsenic residues from any one state was 1.47 ppm, and the highest was 6.43 ppm. The lowest residue level in any one state was 0.33 ppm, and the highest was 39.07 ppm.

In FY 1972, a total of 254 noncropland soil samples were analyzed from 15 states and geographic regions; 242 samples showed arsenic residues. In 12 of the states, 100% of the sites showed arsenic residues, and in the other six 75.0 to 94.7% of the sites showed arsenic residues. The lowest arithmetic mean for arsenic residues from any one state was 1.68 ppm, and the highest was 16.06 ppm. The lowest residue level in any one state was 0.41 ppm, and the highest was 36.05 ppm.

As part of this program, soil samples were analyzed for elemental arsenic (As) in selected urban areas from 1971 through 1976, and in agricultural soil from FY 1969 through 1972. Analysis of urban samples is not yet complete for

cities sampled in 1976 and for several in 1975. For the 24 cities on which analysis has been completed, however, 20 showed arsenic residues in 100% of the samples analyzed; the other four had arsenic residues in 92.3 to 98.9% of the samples analyzed. The lowest arithmetic mean for arsenic residues from any one city was 1.84 ppm, and the highest was 25.28 ppm.[3/] Agricultural soil samples were taken from the National Soils Monitoring Program sites. Arsenic analyses were discontinued in FY 1973. Because arsenic is a naturally-occurring element in soils, arsenic was detected in about 99% of the samples, and the arithmetic mean remained fairly constant during the period of sampling.

Carey et al. (1976) studied 14 U.S. cities of various sizes for pesticide residues in soil during the summer and fall of 1970. Sample sites (231 m^2) were randomly selected in each city. Arsenic residues were found in 97% of the samples analyzed. Geometric mean values for arsenic ranged from 0.5658 ppm in Cheyenne, Wyo., to 8.5081 ppm in Philadelphia, Pa.

In 1970, Steevens et al. (1972a) studied arsenic residues in soil from Wisconsin potato fields in which sodium arsenite had been extensively used as a defoliant from 1958 to 1968. Composite soil samples of 10 randomly selected cores from the plow layer were taken from 18 potato fields in the three principal potato-growing areas of Wisconsin. The authors noted that the level of naturally occurring arsenic in soil ranged from 2 to 10 ppm. This study showed arsenic soil levels of <10 ppm at seven sites and from 10.0 to 25.7 ppm at 11 sites. The authors concluded that past usage of sodium arsenite in these fields had not resulted in arsenic levels which would be detrimental to crops.

3/ The highest average arsenic level was in Tacoma, Washington, site of a copper smelter which, based on the high ambient arsenic levels observed, has been described as "one of the most important individual sources of arsenic with emissions of 310 tons/year" (EPA 1976b). These residues seem clearly to be of industrial, rather than agricultural, origin.

(2) Water

A report on drinking water and health by the National Academy of Sciences (NAS 1977a) noted that the maximum no-observed-effect level for arsenic in water is <100 ug/liter. The report called the current mandatory U.S. drinking water limit of 50 ug arsenic/liter "only a meager margin of safety," since intake from 2 liters/day of water containing 20 ug arsenic/liter is slightly greater than 10% of the median total intake of arsenic. The current World Health Organization and U.S.S.R. limits for arsenic in drinking water are 50 ug/liter.

(3) Air

Arsenic residues in air result from smelting of metals; burning of coal, vegetation treated with arsenicals, and agricultural wastes; ginning of cotton; and use of arsenical pesticides.

The use of arsenical pesticides constitutes a major source of air pollution. From 1937 to 1940, Neal et al. (1941) studied the amount of arsenic and lead in the air from the use of lead arsenate in orchards. The arsenic concentration was highest when pesticide containers were burned (16,670 ug/m^3), followed by mixing the pesticide (1,850 ug/m^3), picking the fruit (880 ug/m^3), spraying the pesticide (140 ug/m^3), and thinning the fruit (80 ug/m^3).

Arsenic in dusts and gases from cotton gins is another source of arsenic air pollution. The pesticides are used for weed control and for cotton desiccants. From 46 to 91 miles downwind of a cotton gin in Texas, arsenic concentrations in the air varied from 600 to 141,000 ng/m^3 (HEW 1967).

(4) Fish

Mackenthun (1960) studied the long-term effects of sodium arsenite used as an aquatic herbicide in Wisconsin. One lake with an area of 2,501 acres had received the equivalent of 87 pounds of As_2O_3 per acre, during the period 1950 to 1960, along the shoreline. Arsenic content in fish from this and an untreated lake was determined. One largemouth bass from the treated lake showed no arsenic residues. A largemouth bass, a black crappie, and a bullhead showed <0.05 ug/g As_2O_3 in flesh and 0.1 ug/g in skin and scales. One 7-inch bluegill had 0.064 ug/g in flesh and 0.27 ug/g in flesh and 0.127 ug/g in skin and scales. Fish from the untreated lake showed no arsenic residues.

Lucas et al. (1970) conducted a study on concentrations of trace elements, including arsenic, in fishes from three Great Lakes (Michigan, Superior, and Erie) during 1968 and 1969. Species used for whole-body analyses were alewives (Alosa pseudoharengus), spottail shiners (Notropis hudsonius), and trout-perch (Percopsis omiscomaycus). Since alewives were small, about 20 were combined for each sample; spottail shiners and trout-perch were analyzed individually.

Alewives from Lake Michigan contained 23 ppb arsenic (based on a single determination); spottail shiners from Lake Michigan contained 3 ppb (based on a single determination); and trout-perch from Lake Michigan contained an average of 43 ± 12 ppb. Spottail shiners from Lake Erie contained 3.5 ± 3.0 ppb arsenic/g of tissue, and trout-perch from Lake Superior contained 7 ± 2 ppb. The authors noted that arsenic concentrations in trout-perch from Lake Michigan appeared to be significantly higher than in those from Lake Superior.

The authors also determined the arsenic concentration in livers of 10 species of fish. Lake herring (Coregonus artedii) from Lake Superior contained an average of 69 ± 30 ppb arsenic/g of tissue; lake whitefish (C. clupeaformis) from Lake Superior contained 6.4 ± 0.7 ppb; bloater (C. hoyi) from Lake Superior contained 63 ± 17 ppb; round whitefish (Prosopium cylindraceum) contained 5.6 ± 3.4 ppb; and lake trout (Salvelinus namaycush) contained 80 ± 10 ppb. Fish from Lake Erie which contained arsenic concentrations included goldfish (Carassius auratus), 0.3 ± 0.2 ppb; white bass (Roccus chrysops), 0.8 ± 0.4 ppb; and walleye (Stizostedion v. vitreum), 0.8 ± 0.5 ppb.

Walsh et al. (1977) conducted a study of arsenic and heavy metal residues in fish from 1971 to 1973 from 100 monitoring stations throughout the 50 states and Puerto Rico. The detection limit for arsenic was 0.05 mg/kg. The authors noted that only selected samples were analyzed in 1973 and that these figures should be used cautiously as trend data. The results showed that arsenic was present

in more than 90% of the samples. Arsenic levels ranged up to 3.40 mg/kg in 1971, 1.70 mg/kg in 1972, and 1.24 mg/kg in 1973. Fish from the Great Lakes had high residues more frequently than fish from other stations.

(5) Birds

Martin and Nickerson (1973) conducted a nationwide study of arsenic and heavy metal residues in starlings (Sturnus vulgaris), which were collected in 1971 at 50 sites throughout the continental United States. The authors noted that arsenic residues were low (<0.04 ppm). Only one sample from Michigan showed a higher arsenic content (0.21 ppm). Eight samples showed no detectable arsenic resiudes.

White et al. (1977) conducted a similar study in starlings, which were collected in 1973 at 51 sites throughout the continental United States. The authors noted that residue levels were generally low; arsenic residues ranged from <0.05 to 1.40 ppm. The average level for all 51 sites was 0.160 ppm. The authors also stated that there had been a significant increase in arsenic residues in starlings since 1971. Arsenic residues were 88% higher in 1973. Twenty-eight of 1973 samples (55%) contained residues of 0.10 ppm or greater.

Blus et al. (1977) studied residues of organochlorine pesticides and 10 heavy metals in livers and eggs of brown pelicans (Pelecanus occidentalis), a rare and endangered species, from 1969 through 1973. Pelican colonies in Florida (1969 to 1970) and South Carolina (1971 to 1972) were sampled. Arsenic residues in eggs from South Carolina were three times higher than those from Florida. Arsenic residues in eggs from South Carolina and Florida, respectively, ranged from 0.076 to 0.85 ug/g and 0.07 to 0.18 ug/g fresh wet weight.

Livers of four brown pelicans, shot in 1970, were checked for arsenic residues. Livers of an adult female and an immature male, both shot in Florida, contained 0.63 and 0.89 ug of arsenic/g fresh wet weight, respectively. Livers of a 6-week-old female and an adult male, both shot in South Carolina, contained 0.36 and 0.29 ug/g, respectively.

Livers of four brown pelicans, found dead in 1972 and 1973, were also checked for arsenic residues, with the following results: 0.47 ug arsenic/g fresh wet weight in an adult female found in Florida in 1972; 0.23 ug/g in an adult female found in Georgia in 1972; 0.54 in an immature male found in Florida in 1973; and 1.02 ug/g in an 8-week-old female found in South Carolina in 1973.

The authors noted that each egg and tissue sample of brown pelicans that was analyzed contained residues of ten heavy metals, but that the significance of these residues to the pelicans was undetermined.

Lynch (1973) studied the occurrence of selected toxic metals, including arsenic, in pheasants (Phasianus colchicus) in Ohio. Twenty-six samples of pheasant breast muscle were analyzed for arsenic with a detection limit of 0.001 ppm. Sixteen samples contained detectable arsenic residues. The highest amount found was 0.172 ppm. The author indicated that, although lead arsenate was recommended for use in apple orchards in 1973, only 1% of Ohio orchards were treated with it. The author did not state whether arsenic residues in pheasants resulted from natural background levels or from agricultural or industrial pollution.

(6) Mammalian Wildlife

Lynch (1973) studied the occurrence of selected toxic metals in cottontail rabbits (Sylvilagus floridanus), squirrels (Squirus carolinensis and S. niger), and white-tailed deer (Odocoileus virginianus) in Ohio. The detection limit for arsenic residues was 0.001 ppm. Eleven samples of deer leg muscles were analyzed; six contained detectable arsenic residues. The highest amount found was 0.217 ppm.

Three samples of rabbit femur were analyzed, but none contained detectable arsenic residues. Twenty-two samples of rabbit leg muscle were also anlyzed; four contained detectable arsenic residues. The highest amount found was 0.020 ppm. A single sample of squirrel brain contained 0.055 ppm arsenic. Of four samples of squirrel femur analyzed, one contained arsenic at 0.017 ppm. A single sample of squirrel liver contained 0.035 ppm arsenic. Twenty-three samples of squirrel leg muscle were analyzed; 13 contained detectable arsenic residues. The highest amount found was 0.035 ppm.

(7) Food and Feed

The following studies indicate that inorganic arsenic residues (as As_2O_3) in various foods are generally below the established tolerance levels. Arsenic occurs in food and feed as either a natural constituent or as a residue from pesticides or smelter pollution.

Generally, the only foods which are high in arsenic are seafoods. Schroeder and Balassa (1966) sampled food and

beverages available in grocery stores and found that fish and other seafoods had the highest levels (mean of 4.64 ppm) while fruits had the lowest content (mean of 0.042 ppm).

Chapman (1926) reported mean values of up to 80 ppm of arsenic in mussels, oysters, and scallops, while mixed fresh water fish contained 0.65 ppm.

Bradicich et al. (1969) studied arsenic residues in samples of various food commodities in Texas in 1963 from areas where arsenical defoliation had been practiced. The study was continued in 1964, 1965, and 1966 for cottonseed products. A majority of the samples for 1963 (77 out of 107) showed arsenic residues; the average residue levels ranged from 0.01 to 0.90 ppm, and the maximum residue levels ranged from 0.01 to 3.72 ppm. Over 95% of the cottonseed oil and cottonseed meal samples showed residues significantly higher than the other commodities.

Of the 159 cottonseed-product samples tested from 1963 through 1966, 143 were positive, but only three were above the established tolerance level of 4 ppm for As_2O_3 (see Section I.D). The average residue level for all hull samples was 1.2 ppm, for all meal samples 1.4 ppm, and for oil samples (the main product of human consumption) 0.4 ppm.

In 1970 Steevens et al. (1972a) studied arsenic levels in flesh and peelings of potato tubers grown in Wisconsin potato fields on which sodium arsenite had been extensively used as a defoliant from 1958 to 1968. (The use of sodium arsenite as a potato vine defoliant was cancelled in 1969.) The arsenic concentration in potato peelings ranged from 0.2 to 2.3 ppm and in potato flesh ranged from a trace to 0.6 ppm. The arsenic (As) tolerance limit at that time was 2.6 ppm.

Crecelius (1977a) analyzed 19 samples (plus one duplicate of each of two samples) of domestic table wines from several types of arsenic (arsenite, arsenate, methylarsonic acid [MAA], and dimethylarsinic acid [DMAA]). Arsenite concentration in these samples ranged from < 1 to 420 ppb, and arsenate from < 1 to 110 ppb. Both MAA and DMAA levels were below the detection limit of 1 ppb in these samples. The United States does not have an arsenic standard for wine, although a maximum value of 20 ppb was once recommended. Great Britain's maximum tolerable arsenic level in wine is 100 ppb, and several other countries (not identified by the author) have a limit of 200 ppb. The maximum arsenic level for drinking water in the United States is 50 ppb. The proposed 20 ppb U.S. Standard for wine was exceeded by 15 of the 19 samples for arsenite and 14 samples for arsenate; the 50 ppb U.S. water standard was exceeded by 12 samples for arsenite and two samples for arsenate; the 100 ppb British

Standard for wine was exceeded by ten samples for arsenite and one sample for arsenate; the 200 ppb standard from "other countries" for wine was exceeded by five samples for arsenite. The author did not investigate agricultural practices in the vineyards. The author described the arsenic levels in some samples as "surprisingly high" and suggested they were due to use of arsenicals in the production of grapes. The tolerance level for lead arsenate on grapes is 7 ppm and for sodium arsenate is 3.5 ppm. There is an interim tolerance of 0.5 ppm for use of sodium arsenite on grapes.

The Food and Drug Administration (FDA) conducts periodic Market Basket Surveys of pesticide residues in total diet samples of ready-to-eat food. The samples are representative of a two-week intake for males 16 to 19 years old from moderate income families. Composite samples of food commodity groups are analyzed for arsenic as As_2O_3. The analytical method does not distinguish between naturally occurring arsenic and arsenic residues from industrial or agricultural sources. The following studies reported on arsenic residues found in FDA's Market Basket Survey.

Cummings (1966) reported that arsenic residues in samples from Baltimore, Maryland, analyzed in May 1964,

ranged from 0.10 to 4.7 ppm. Food commodity groups in which arsenic residues were found were meat, fish, and poultry; grain and cereal products; potatoes; legume vegetables; root vegetables; and fruit.

Duggan et al. (1966) reported on pesticide residues in diet samples collected bimonthly from June 1964 through April 1965 from retail food stores in Boston, Massachusetts; Kansas City, Missouri; and Los Angeles, California. Arsenic (As_2O_3) was found in six of the 216 composite samples assayed, at levels ranging from 0.1 to 4.7 ppm. Arsenic was present in one of the 18 meat, fish, and poultry samples at 0.12 ppm; in one of the 18 grain and cereal samples at 0.10 ppm; in one of the 18 potato samples at 4.7 ppm; in one of the 18 legume vegetable samples at 0.11 ppm; in one of the 18 root vegetable samples at 0.10 ppm; and in one of the 18 fruit samples at 0.18 ppm.

Duggan and Weatherwax (1967) reported on the average daily intake of all pesticide residues in or on the total diet samples collected in 25 cities from June 1964 through April 1966. The results showed that the daily intake of arsenic residues (As_2O_3), expressed in milligrams per day, for samples collected from June 1964 through April 1965, were trace (>0.001 mg) for meat, fish, and poultry samples; 0.002 for grains and cereals; 0.063 for potatoes; 0.001 for legume vegetables; 0.001 for root vegetables; and 0.002 for fruits.

Results for samples collected from June 1965 through April 1966 were 0.003 for meat, fish, and poultry; 0.001 for grain and cereals; trace for root vegetables; 0.001 for garden fruits; and 0.001 for sugars and adjuncts. The authors noted that whereas the average 16-to-19-year-old male consumes about 8.8 pounds of food and drink daily, the average individual in the general population consumes only about 4.8 pounds daily.

Duggan et al. (1967) reported on pesticide residues in total diet samples collected from June 1965 through April 1966. Arsenic residues, ranging from 0.1 to 0.5 ppm (As_2O_3), were found in 5 of 28 composites of meat, fish, and poultry; in one of 28 composites of grain and cereals at 0.1 ppm; in one of 28 composites of root vegetables at 0.1 ppm; in one composite of garden fruits at 0.1 ppm; and in one of 28 composites of sugars and adjuncts at 0.1 ppm.

Martin and Duggan (1968) reported on 360 total diet samples, from 30 markets in 29 cities for June 1966 through April 1967. Arsenic (As_2O_3) was found in 33 diet samples; residue levels ranged from 0.1 to 0.4 ppm. Eight samples showed arsenic residues below the analytical sensitivity level.

H. Pesticide Episode Reports System (PERS)

EPA's Pesticide Program maintains a Pesticide Episode Reports System (PERS) which collects reports of pesticide exposure affecting humans, domestic animals, livestock, and wildlife (EPA 1977). According to those records, there were 308 episodes from 1966 through April 1977 involving various inorganic arsenicals.

There were 25 episodes involving use of arsenic trioxide alone as a rodenticide or insecticide. All of these involved humans. For 15 of these 25 episodes, which include seven fatalities, there was substantial evidence that arsenic trioxide was directly involved; and for eight episodes, there was insufficient evidence to either prove or disprove involvement of arsenic trioxide.

There were 17 episodes involving use of arsenic trioxide as an herbicide. Seven of these involved other active ingredients, including arsenic acid, lead arsenate, arsenous oxide, heptachlor, and sodium chlorate. Six of these 17 episodes involved livestock, five involved crop contamination, three involved humans, and one each involved a bee kill and water contamination. For seven of these episodes which include one fatality, there was substantial evidence that arsenic trioxide was directly involved; for

five episodes, there was insufficient evidence; and for one episode, there was evidence which proved that arsenic trioxide was not responsible.

There were 128 episodes involving use of sodium arsenate and/or arsenite as an insecticide and wood preservative. One of these episodes involved other active ingredients. One of these episodes involved a dog, one involved livestock, and the other 126 episodes involved humans, mostly children. For 14 of these 128 episodes which include two fatalities, there was substantial evidence that sodium arsenate/arsenite was directly involved; for 16 episodes which include one fatality, there was circumstantial evidence; and for 98 episodes which include one fatality, there was insufficient evidence to either prove or disprove involvement of sodium arsenate/arsenite.

There were 50 episodes involving use of sodium arsenite as an herbicide. In three of these episodes other forms of arsenic were also involved. One each of the 49 episodes involved a stand of trees and a dog; 20 involved livestock; and 28 involved humans. For 34 of these episodes which include twenty fatalities, there was substantial evidence that sodium arsenite was directly involved; for five episodes, there was circumstantial evidence; for 10 episodes which include one fatality, there was insufficient evidence; and for one episode, there was evidence which proved that sodium arsenite was not responsible.

There were 33 episodes involving use of lead arsenate as an insecticide. Boric acid was involved in two of these episodes, of which 31 involved humans, one involved livestock, and one involved contamination of well water. For five of these 33 episodes, there was substantial evidence that lead arsenate was directly involved; and for 28 episodes, there was insufficient evidence to either prove or disprove involvement of lead arsenate. There were no fatalities in any of the episodes involving humans.

There were 16 episodes involving use of calcium arsenate as an insecticide or herbicide. Five of these involved calcium arsenate alone, and eleven also involved other active ingredients (mostly metaldehyde). Twelve of these episodes involved humans, two involved livestock, and one each involved a dog and well water contamination. For three of these 13 episodes, there was substantial evidence that calcium arsenate was directly involved; for four episodes, there was circumstantial evidence; for eight episodes which include one fatality, there was evidence which proved that calcium arsenate was not responsible.

There were three episodes involving use of copper acetoarsenite as an insecticide, all of which involved humans.[4/] For one episode, there was substantial evidence

4/ In one episode, other active ingredients (MSMA, diazinon, and malathion) were also involved.

that copper acetoarsenite was directly involved; and for two episodes, there was insufficient evidence to either prove or disprove involvement of copper acetoarsenite. No fatalities were reported.

In addition, 36 episodes involving various inorganic arsenicals were reported which were not use-related. These episodes involved suicides and homicides, fires, and transportation accidents.

1. Lead Arsenate - Chronic Effects Due to Lead

Although lead arsenate contains a lead moiety, the chronic effects seen in vintners and others who use the compound do not correspond to chronic lead effects. Rather the effects are typical of those seen with other inorganic arsenicals (see Section IV. B). In the human body, inorganic lead has damaging effects on the hematological, neurological, and renal systems (Nordberg 1976). The Agency will conduct a separate evaluation of possible adverse effects due to lead in the future.

Lead interrupts many steps in the pathway of heme synthesis and formation of hemaglobin, both part of the blood-forming process. Lead also shortens the life span of erythrocytes. Lead affects both the central and peripheral nervous systems. Encephalopathy is a major effect on the central nervous system and

usually results from a more intensive and prolonged exposure to lead than that inducing hematological effects. The acute form may be fatal. Peripheral nervous system disorders due to chronic lead exposure are characterized by selective involvement of motor neurons with little sensory involvement. Lead effects on the renal system, such as nephritis, are seen primarily in adults with heavy occupational exposure. The long-term effect on the kidneys is nonspecific nephropathy.

Teratogenic and reproductive effects of lead in humans have not been studied extensively. There are reports of steriltiy, stillbirths, and miscarriages in women industrially exposed.

J. Arsenate and Arsenite: Interconversion

Studies discussed in this portion of the position document indicate arsenate (in either the organic or inorganic form) to be the predominant form of arsenic in mammals. When inorganic arsenite is administered the majority of the arsenic is converted (oxidized) to the less acutely toxic pentavalent form. Information on the conversion of the less acutely toxic pentavalent arsenicals (arsenates) to the more acutely toxic trivalent form (arsenites) is of importance in evaluating the environmental and health effects of the inorganic arsenic compounds used as pesticides.

Based on studies presented in this section and on an analysis by EPA's Carcinogen Assessment Group (EPA 1978) the Agency concludes that although oxidation of trivalent arsenic (arsenite) to the pentavalent form (arsenate) is the favored reaction, pentavalent arsenic (arsenate) can be reduced in vivo to the trivalent form (arsenite). This conclusion is supported by: 1) in vivo experiments in mammals, 2) qualitative similarities in toxic effects of arsenite and arsenate, and 3) data showing an equilibrium ratio between arsenate and arsenite. For additional information dealing with metabolism see Sections I.E(1)(c), (d), and I.E.(5).

(1) Metabolism - In Vivo Interconversion

The following studies show that inorganic arsenite (trivalent) is oxidized in vivo to arsenate (pentavalent) and/or that inorganic arsenate is reduced in vivo to arsenite.

Mealey et al. (1959) demonstrated that conversion takes place within human body tissues. Radioactive inorganic arsenite was administered intravenously to five humans; the amounts of arsenite and arsenate in the urine were monitored over time. During the first four days, the percentage of

arsenite to arsenate in the urine leveled off at about 75% arsenate. Results indicated that oxidation of arsenite to arsenate took place within body tissues.

Winkler (1962) had findings similar to Mealey et al. (1959) after identifying and estimating arsenic residues in livers of rats ingesting arsenicals. Rats were fed sodium arsenite and sodium arsenate at 125 and 250 ppm of arsenic. The animals were killed after 90 days, and their livers were analyzed. The results showed that trivalent inorganic arsenic was largely changed to the pentavalent form in the rat. Pentavalent arsenic, however, was not reduced to the trivalent form.

Lakso and Peoples (1975) observed essentially similar levels of methylated arsenic and inorganic arsenic (individual species not measured) after feeding experiments with cows and dogs in which both sodium arsenate and potassium arsenite were administered. The authors suggested that the short delay in increased methylated arsenic excretion after arsenite feeding is indicative of the oxidation of arsenite to arsenate prior to methylation.

Crecelius (1977b) studied changes in the chemical speciation of arsenic following ingestion by man. The

subject of this study was one 30-year-old male whose diet was controlled to minimize the intake of arsenic from any other food or drink before and during the experiment.

In the experiment, 450 ml of wine, containing 50 ug trivalent and 13 ug pentavalent arsenic, was ingested. The major form of arsenic excreted in the urine after 61 hours was dimethylarsinic acid (DMAA), a pentavalent arsenical, which accounted for about 50% of the total 63 ug of arsenic ingested. Trivalent and pentavalent arsenic each accounted for 8%, and methylarsonic acid (MAA), another pentavalent arsenical, for 14%. The author concluded that, when trivalent arsenic is ingested, a small portion is excreted unchanged as arsenite, but that the majority is oxidized and methylated in the body and excreted as DMAA and MAA (pentavalent arsenic).

Conversion of the trivalent to the pentavalent form of arsenic has often been described in the literature (Oak Ridge 1976; EPA 1976b; AWPI 1977).

Although the *in vivo* oxidation of trivalent arsenic to pentavalent arsenic is the favored reaction, the possibility of reduction *in vivo* of pentavalent arsenic to the trivalent form has been suggested by several investigations.

Thuret (1939) reported that *in vitro* experiments showed reduction of pentavalent arsenic, in contact with

liver pulp, to the trivalent form after six hours. Lanz et al. (1950), in a study on rats using radio-labeled sodium arsenate, reported that 10 to 15% of the inorganic arsenic recovered from the urine was in the trivalent form.

Ginsburg and Lotspeich (1963) and Ginsburg (1965) observed that arsenates are reduced to arsenites under certain conditions. These studies are of particular concern to the Agency in that they report reduction *in vivo*.

Ginsburg and Lotspeich (1963), in a study on the interrelation of arsenate and phosphate transport in the dog kidney, reported *in vivo* reduction of arsenate to arsenite during intravenous infusion of a solution containing pentavalent arsenic and 1.5% trivalent arsenic. About 5.5% of the plasma arsenic and 14% of the urinary arsenic was in the trivalent state during the first three periods of the experiment. The authors also noted a net secretion of trivalent arsenic in the urine because of intracellular reduction by renal tissue.

In further investigations, Ginsburg (1965) demonstrated that some infused arsenate is reabsorbed by the dog kidney and reduced to arsenite. A representative experiment measured the kidney clearance of arsenate and arsenite during the intravenous infusion

of a solution containing arsenate (98.6%) and only 1.4% arsenite. If both valence forms are treated similarly by the kidney (i.e., no conversion), the relative proportions of pentavalent and trivalent arsenic in the urine should be the same as in the plasma. After 35 minutes of infusion, however, 5.6% of the plasma arsenic and 14% of the urine arsenic was trivalent. Based on comparisons with *in vitro* experiments, this higher level of arsenite *in vivo* was not accounted for by simple filtration by the kidney or by a greater reduction of arsenate in the urine than in the plasma. In 15 control experiments the ratio of the percent of arsenite in urine to the percent of arsenite in plasma ranged from 1.9 to 4.2 (mean 2.8). After infusion of arsenate, there was a net renal tubular reabsorption of arsenate (26% of the filtered arsenate) and a net secretion of arsenite occurred. The rate of arsenite secretion was directly proportional to the rate of arsenate reabsorption. There was also a greater concentration of arsenite in renal venous plasma than in renal arterial plasma.

In another experiment where a solution of arsenite (91.6%) containing 8.4% arsenate was infused into the dog, arsenate appeared in the plasma and urine

at levels greater than 8.4%, indicating *in vivo* oxidation. There was a net reabsorption of trivalent and, to a lesser extent, of pentavalent arsenic. There was no net secretion into the urine of arsenite during this infusion which indicates that arsenite is probably not actively transported in the kidney. When arsenate was then added to the infusion solution in the second phase of the experiment, the additional arsenate was available for reabsorption. Consequently, the former net reabsorption of arsenite changed to a net secretion of arsenite, indicating a conversion of arsenate to arsenite.

After experimentally examining several hypothetical explanations for the increased presence of arsenite in the urine and plasma, the author concluded that arsenite is secreted into urine and blood from an intracellular site (tubular cells) in the kidney, where some of the arsenate reabsorbed from the glomerular filtrate is intracellularly reduced to arsenite. This process is dependent on a concentration gradient for arsenite from cell to urine which is established by the intracellular reduction of the arsenate reabsorbed from the glomerular filtrate. Ginsburg noted that this gradient for arsenite from cell to urine and blood was established only when the arsenic infusion contained large amounts

of arsenate relative to arsenite. He also noted that it is not known whether the arsenic retained in the kidney cells is in the form of arsenate or arsenite.

Peoples (1964), however, failed to show in vivo -duction of arsenate to arsenite. In this study arsenic acid (a pentavalent arsenical) was fed to lactating Holstein cows at levels of 0 to 1.25 mg/kg daily for eight weeks. The results showed no significant variation in weekly milk samples at any feeding level from controls, although small amounts of arsenic acid were detected. The arsenic found in the livers of two cows fed arsenic acid was entirely in the pentavalent state. The author concluded that the small amounts of tissue-bound arsenic were entirely in the pentavalent form and that there was no evidence that it was partly reduced to the trivalent form.

The Occupational Safety and Health Administration [OSHA (1978)], has concluded "that the presently available evidence indicates that there is little or no conversion of pentavalent to trivalent arsenic in

the body." In reaching this conclusion OSHA relied heavily on testimony by Dr. Peoples (1975) during hearings held by OSHA on inorganic arsenic. Dr. Peoples concluded that the Ginsburg findings "could not be relied on because the analytical method was not accurate in the range of the reported sample size."

In an effort to answer the question of the realiability of the studies by Ginsburg and Lotspeich (1963) and Ginsburg (1965), EPA submitted these studies for outside review. In validation reports for the Agency on both Ginsburg papers, Lombardini (1978b; 1978c) concludes that Ginsburg's observation of in vivo reduction of arsenate to arsenite were supported by the data given. In addition, Lombardini (1978a) evaluated the paper by Crawford and Storey (1944) which described the analytical method used by Ginsburg. Lombardini stated that the method was "somewhat of a classical technique...still in use in 1978." He added, "This procedure has been time-tested and is valid."

Although the issue is not free from doubt, the Agency concludes that sufficient scientific information is available to support the conclusion that

pentavalent arsenic can be converted to trivalent arsenic in the body. In questions such as this one on the frontiers of scientific knowledge, decision-making must to a large extent rest on policy judgments. In view of the scientific information available and the serious health issues at stake, the Agency has made the judgment that it is in the public interest to bring forward through the RPAR process its tentative conclusion that pentavalent arsenic converts to trivalent arsenic in vivo. The RPAR process is intended to be an information-gathering process which will provide the broadest base possible for final regulatory decision-making.

(2) Toxicity - Qualitative Similarities and Quantitative Differences

The similarity of the toxic effects of trivalent and pentavalent arsenicals may provide additional support for the proposition that there is in vivo interconversion of arsenate to arsenite. The following studies describe some of the qualitative similarities and the quantitative differences in the effects of arsenate and arsenite.

The acute toxicity (via intraperitioneal injections) of sodium arsenite to rats is about 3.6 times that of sodium arsenate (Franke and Moxon 1936).

In a teratology study of random-bred albino Swiss-Webster mice, Hood (1972) administered sodium arsenite via single intraperitoneal injections on days 7 to 12 of gestation at dose levels of 10 and 12 mg/kg. He observed the same spectrum of abnormalities which he had seen with a 4.5 times higher sodium arsenate treatment of 45 mg/kg (Hood and Bishop 1972). The incidence of defects was slightly higher with the 45 mg/kg arsenate. Although the author admits that the similarity of abnormalities does not prove the mechanism of action is identical for the two forms of arsenic, he does state that the experiment tends to support the theory that there is interconversion of arsenate to arsenite, which is the more acutely toxic form.

A 2-year feeding study was performed by Byron et al. (1967) on Osborne-Mendel rats and beagle dogs using sodium arsenite and sodium arsenate. For the rat experiment, the sodium arsenite dose levels ranged from 0 to

250 ppm; and for sodium arsenate they ranged from 0 to 400 ppm. The most significant effect from treatment with each arsenical was a marked enlargement of the common bile duct, which was accompanied by a 10-fold thickening of the endothelium. Both agents produced the same effect; the incidence and severity of the enlargement was slightly higher in the highest two arsenate dose groups than the highest two arsenite groups. Dogs treated with arsenate or arsenite experienced weight loss and high mortality, but displayed no histological features remarkably different from controls. The degree of mortality and weight loss was equivalent in the highest and second highest dose groups. In rats and dogs, both forms of arsenic produced the same qualitative toxic effects; the trivalent arsenite was about twice as potent as the pentavalent arsenate.

Savchuck et al. (1960) investigated the differential toxicity (expressed as growth inhibition) of arsenite and arsenate in cultured HeLa cells. Both arsenate and arsenite were found to inhibit the growth of cultured

human liver cells. The levels of arsenic necessary to inhibit growth by 50% were 2.0 ppm of sodium arsenate (pentavalent arsenic) and 0.13 ppm of sodium arsenite (trivalent arsenic). Arsenite, therefore, is approximately 15 times more toxic than arsenate in this in vitro system. Growth inhibition is a definable toxicological end point as is acute toxicity, teratogenicity, and weight loss. Therefore, this study is of value in evaluating similarity of toxic effects.

The studies discussed above demonstrate that both forms of arsenic produce the same qualitative toxic effects, and that the trivalent arsenite is about twice as potent as the pentavalent species. These studies lend support to findings primarily by Ginsburg (1965) and Ginsburg and Lotspeich (1963) that pentavalent arsenic is converted to the trivalent form in vivo.

(3) Equilibrium

Under anaerobic conditions, there is in vitro evidence of an equilbrium between arsenate and arsenite that favors arsenite. The following study by Crecelius (1977a), using wine fermentation (anaerobic process) indicates a four-to-one ratio of arsenite to arsenate regardless of whether arsenite or arsenate were added to a grape juice/yeast mixture. This study demonstrates

that living systems (i.e., yeast) do not affect the valence state of arsenic in an indiscriminant manner. Under a given set of physical and biological conditions the relative proportion of arsenite and arsenate will reach an equilibrium ratio. The arsenic is never all in the form of arsenate nor all in the form of arsenite. If an equilibrium between arsenate and arsenite is attained under anaerobic conditions (i.e., fermentation), it would be logical to assume that under aerobic conditions (the predominant condition in mammals) an equilibrium ratio would also exist. The concept of an equilibrium between arsenate and arsenite suggests that a certain amount of arsenite will be formed whenever a living system is exposed to arsenate. The studies by Ginsburg lend support to this theory.

Crecelius (1977a) studied the metabolic interconversion of inorganic arsenite and arsenate by yeast in the fermentation of grape juice [see Section I.G.(9)]. Trivalent arsenic (arsenite), pentavalent arsenic (arsenate), MAA, and DMAA were added to four equal samples of concord grape juice with wine yeast. The amounts of the four kinds of arsenic were determined after two weeks when the fermentation had stopped. The results showed that the fermentation process reduced approximately 60% of the initial pentavalent arsenic

to the trivalent form, but did not methylate the trivalent arsenic and did not demethylate the MAA. The author also found that, of the arsenic in the final solutions, the final ratio of arsenite to arsenate concentration was about four to one. These results indicate that pentavalent or trivalent arsenic is changed in the fermentation process to yield the same equilibrium ratio, a 4 to 1 ratio of arsenite to arsenate (EPA 1978), regardless of the starting material. Creceluis also found in a survey of 19 domestic table wines, that the arsenite to arsenate ratio averaged about four to one.

It is likely that arsenate will be favored in aerobic conditions that might exist in intact animals. Arsenite

will be favored in anaerobic systems such as wine fermentation. Ferguson and Gavis (1972) have suggested that oxidation and reduction may occur in aerobic and anaerobic natural waters, respectively.

II. REGULATORY HISTORY

Inorganic arsenicals have been the subject of numerous Federal regulatory actions since they were originally registered as pesticides. These actions have been initiated by both the U.S. Department of Agriculture and EPA.

Pesticide Registration (PR) Notice 67-2 issued on August 1, 1967, called attention to "numerous accidents involving children and domestic animals" caused by products containing sodium arsenite and arsenic trioxide. Such products labeled for home use were required to contain no more than 2.0% sodium arsenite nor more than 1.5% arsenic trioxide. In addition, labels of commercial products containing these two compounds were required to warn against storage in or around the home and against allowing domestic animals to graze on treated areas (USDA 1967).

PR Notice 68-3 issued January 10, 1968, classified use of calcium arsenate on droppings under caged layers in poultry houses as a non-food use, and allowed its registration for this use to continue in the absence of finite tolerances (USDA 1968a).

PR Notice 68-8 issued April 24, 1968, classified use of calcium arsenate on tree fruits and use of paris green as a special mosquito larvicide as non-food uses, and allowed registrations for these uses to continue in the absence of finite tolerances (USDA 1968b).

PR Notice 68-19 issued November 29, 1968, required labeling statements for certain economic poisons to protect honeybees and other pollinating insects (USDA 1968c). Arsenical pesticides were listed as "highly toxic" to bees, and labels of such products intended for foliage treatment on agricultural crops, mosquito abatement treatments, and foliage treatment on forest or shade trees were required to bear the warning, "This product is highly toxic to bees exposed to direct treatment or residue on crops."

PR Notice 71-7 issued May 7, 1971, announced that EPA was undertaking an active internal review of arsenicals and other pesticides to determine if any of the presently registered products presented questions of safety substantial enough to initiate the administrative process of cancellation (EPA 1971a).

A series of PR Notices (USDA 1968d; 1968e; 1968f; 1969a; 1969b; 1969c; and 1970a; and EPA 1971b) were issued over several years, extending certain "no residue" and "zero tolerance" registrations of various inorganic arsenicals, based on pending petitions for finite tolerances. Such extensions were granted for use of sodium arsenite on grapes, potatoes, aquatic weeds, beef cattle, goats, and sheep; and for use of lead arsenate on almonds, cabbage, lettuce, potatoes, spinach, turnips, and walnuts.

Another series of PR Notices (USDA 1968g; 1969d; and 1970b; and EPA 1972) were issued to cancel registrations of certain inorganic arsenicals for use on food in the absence of finite tolerances or exemptions. Such cancellations were

issued for the use of arsenic trioxide, calcium arsenate, lead arsenate, copper acetoarsenite, sodium arsenate, and sodium arsenite on livestock and numerous food and feed crops.

III. EXPOSURE ANALYSIS

In subsequent portions of this document the Working Group will discuss the potential adverse effects of inorganic arsenicals. The Agency's decision whether to permit the registration or continued registration of these pesticides will be based, to a large extent, upon anticipated human exposure resulting from their use.

This preliminary exposure analysis discusses representative exposure situations as a basis for comment by interested parties. Before the Agency makes any regulatory decision concerning inorganic arsenical pesticides, a complete risk and benefit analysis will be performed, and the benefits of use of these pesticides will be weighed against their potential risks.

The Working Group emphasizes that a safe level for carcinogenic or mutagenic substances has never been established. Therefore, any level of a carcinogenic or mutagenic substance may cause an adverse effect and the Agency does not consider exposure when determining whether to issue an RPAR based on carcinogenic or mutagenic

effects. Exposure is considered, however, when determining whether or not to issue an RPAR based on other chronic effects such as teratogenicity (birth defects). This analysis will address estimated exposure from arsenical pesticides to applicators and the general public.

Arsenical pesticides differ from synthetic organic pesticides in that arsenic is a natural element and does not degrade to less toxic constituents; therefore, the arsenic added to the environment through pesticide application will either remain as residues in the soil where applied, or be removed from the site by plant uptake, erosion, or volatilization. Since arsenic undergoes biological and chemical transformations, the arsenic from pesticides becomes indistinguishable from that occurring naturally.

The Working Group will examine representative exposure situations for each inorganic arsenic compound (see Table 8).

Table 8. Representative Exposure Situations

Agricultural Exposure (including Home and Garden)
1. Applicator exposure resulting from the use of arsenical pesticides on food crops, weeds, etc.; and
2. Exposure resulting from the consumption of food or feed crops treated with arsenical pesticides;
Exposure Resulting From the Treatment of Wood With Arsenical Wood Preservatives and Subsequent Use of Treated Wood
1. Large-scale industrial situations;
2. Intermittent application to wood during on site construction;
3. Exposure from the handling, sawing, and use of treated wood products; and
4. Exposure to individuals living or working in dwellings containing arsenic-treated wood.

When there is the potential for teratogenic effects, the Working Group must determine whether an ample margin of safety exists between the level of arsenic which produces teratogenic effects and the level to which humans can reasonably be anticipated to be exposed. Teratogenic effects occur only when the woman is exposed to the chemical during pregnancy. For this reason the Working Group will base its calculations on a 60-kg female applicator of child-bearing age.

A. Agricultural Exposure (Including Home and Garden)

The following inorganic arsenical pesticides are registered with the Environmental Protection Agency: arsenic acid, ammonium arsenite, arsenic trioxide, arsenic pentoxide, calcium arsenate, copper acetoarsenite, lead arsenate, sodium arsenite, sodium arsenate, and sodium pyroarsenate. Each of these pesticides, with the exception of sodium pyroarsenate, ammonium arsenite, and arsenic pentoxide, have agricultural or home uses. The Working Group will evaluate the oral, dermal, and inhalation exposure to those arsenical pesticides registered for agricultural or home use. Sodium pyroarsenate, ammonium arsenite, and arsenic pentoxide are used in the preservation of wood and will be discussed in subsequent portions of this report.

Because of the lack of data concerning exposure, the Working Group will make the following assumptions:

1. For analysis of oral exposure, the Working Group assumes that arsenic residues will be present at currently authorized tolerance levels. The Working Group realizes that residues found in or on raw agricultural commodities are typically lower than tolerance levels; however, because residues could lawfully be present at tolerance levels it is prudent to assume tolerance levels for regulatory pruposes. The arsenic contribution of each food will be calculated based on the average daily intake of the commodity as reported by Lehman (1962). Iwataki and Horiuchi (1959) sampled feces, urine, and blood of a normal (Japanese) population for arsenic. More than half of the arsenic detected (form not indicated) was found in the blood and urine. It is assumed, therefore, that 75% of all arsenic ingested will be absorbed;

2. For analysis of dermal exposure, it is assumed that the applicator will be contaminated with up to one pint of liquid (diluted for application per label instructions) and up to 10 grams of dust (in the case of dust formulations). It is further assumed that 10% of all arsenic in contact with the skin will be absorbed. Oehme (1972) states that inorganic arsenic is absorbed significantly through the intact skin; and

3. For analysis of inhalation exposure, it is assumed the applicator's breathing rate is 1.8 m^3/hr (active rate) and that all material inhaled will be absorbed. The Working Group also assumes that the applicator would spray for approximately seven hours per day.

(1) Sodium Arsenite

The Working Group has selected a product for analysis which contains 42.5% sodium arsenite as formulated (equivalent to 1.05 kg arsenic/gal). When diluted according to label directions, the solution contains 3.28 grams of arsenic per pint.

(a) Oral Exposure

In order to calculate the theoretical quantity of arsenic in the average diet, the Working Group will use the following formula, A x B x C x D / E in which:

A = the theoretical average daily intake of sodium arsenite in mg/kg, expressed as As_2O_3;

B = 1.5 kg, the average daily food intake (Lehman 1962);

C = 0.76, a correction factor for conversion from milligrams of the arsenic compound (As_2O_3) to total arsenic (the molecular weight of arsenic divided by the molecular weight of the compound);

D = 0.75% absorption factor; and

E = 60 kg. (Exposure is normally expressed in terms of milligrams of chemical per kilogram of body weight. Because teratogenic effects are of concern with inorganic arsenic all calculations of exposure will be based on exposure to a 60-kg woman.)

Therefore, for oral exposure to sodium arsenite (see Table 9), A x B x C x D / E = 0.051 mg/kg X 1.5 kg X 0.76 X 0.75 / 60 kg = 0.0007 mg/kg arsenic.

Table 9. Arsenic in Daily Diet Resulting From the Use of Sodium Arsenite

Food Item	Food Factor (percent of total diet)	Tolerance (mg/kg) [40 CFR 180.335]	Contribution to daily intake (mg/kg[a])
Beef[b]	4.60	0.7	0.0322
Horse[b]	data not available	0.7	---
Edible Offals[c]	0.69	2.7	0.01863
Grapes	0.32	0.05	0.00016
Total	5.61		0.05099 mg/kg

a/ Expressed as As_2O_3.
b/ Meat, fat, and meat by-products.
c/ Liver and kidney.

(b) Dermal Exposure

Assuming a one-pint exposure during mixing, handling, and application, an applicator would receive 3.28 grams X 0.1 (absorption) = 0.328 gm, or 328 mg; 328 mg / 60 kg = 5.47 mg arsenic/kg of body weight from dermal exposure to sodium arsenite.

(c) Inhalation Exposure

Using an estimate of 100 ug/m^3 [based on the concentration of arsenic in sodium arsenite and on extrapolation of data from Pinto et al. (1976)] for the concentration of metallic arsenic and the assumptions stated above, the inhalation exposure for a 7-hour day would be approximately 100 ug/m^3 X 1.8 m^3/hr X 7 hrs = 1,260 ug or 1.260 mg arsenic; 1.260 mg / 60 kg = 0.021 mg arsenic/kg of body weight from inhalation exposure to sodium arsenite.

Total theoretical exposure from sodium arsenite equals:

0.0007 mg/kg (through food)
5.47 mg/kg (due to dermal exposure)
0.021 mg/kg (due to inhalation exposure)
5.5 mg/kg

(2) Arsenic Acid

The Working Group has selected a representative arsenic acid product for analysis which contains 17.5% arsenic acid as formulated (equivalent to 1.5 pounds arsenic per gal). When diluted according to label directions, the solution contains 1.625 grams of arsenic per pint.

Table 10. Arsenic in Daily Diet Resulting From the Use of Arsenic Acid

Food Item	Food Factor (percent of total diet)	Tolerance (mg/kg) [40 CFR 180.180]	Contribution to daily intake (mg/kg[a])
cottonseed	0.6[b]	4	0.0316
Total	0.6		0.0316 mg/kg

a/ Expressed As_2O_3.
b/ Cottonseed is used in edible oils, margarine, etc. This food factor is an estimate and is not found in Lehman (1962).

(a) Oral Exposure

The theoretical quantity of arsenic in the daily diet due to arsenic acid (see Table 10) equals A x B x C x D / E (see oral exposure analysis for sodium arsenite), or 0.0316 mg/kg X 1.5 kg X 0.76 X 0.75 / 60 kg = 0.0005 mg/kg arsenic.

(b) Dermal Exposure

Assuming a one-pint exposure, an applicator would receive 1.625 grams x 0.1 (absorption) = 0.1625 gm, or 162.5 mg; 162.5 mg / 60 kg = 2.7 mg arsenic/kg of body weight from dermal exposure to arsenic acid.

(c) Inhalation Exposure

Using the estimate of 100 ug/m^3 [based on extrapolation of data from Pinto et al. (1976)] for the concentration of arsenic and the assumptions stated above, the inhalation exposure for a 7-hour day would be 100 ug/m^3 X 1.8 m^3/hr X 7 hr = 1260 ug, or 1.260 mg arsenic; 1.260 mg / 60 kg = 0.021 mg/kg arsenic from inhalation exposure to arsenic acid.

Total theoretical exposure from arsenic acid equals:

0.0005 mg/kg (through food)
2.7 mg/kg (dermal exposure)
0.021 mg/kg (inhalation exposure)
2.72 mg/kg

In addition to the exposure situations discussed above, the Working Group is also interested in arsenic exposure resulting from ginning of cotton treated with arsenic acid (as a desiccant). As a representative exposure situation, the Working Group will assess exposure to individuals living or working close to a cotton gin processing cotton treated with arsenic acid. Suta (1978) provided data showing the estimated arsenic in air concentrations at various distances from cotton gins. Arsenic concentrations were estimated to range from 0.003 ug/m^3 to 29 ug/m^3 for

various cotton gins at various distances. Assuming all arsenic in air to be respirable and the concentration to be 29 ug/m^3, inhalation exposure for a 60-kg woman would be: 1.0 m^3/hr (breathing rate of a resting person) X 29 ug/m^3 (concentration of arsenic in air) / 60 kg = 0.48 ug/kg per hour. Assuming exposure to continue 24 hours per day, exposure would be 11.60 ug/kg, or 0.0116 mg/kg per day. These exposure estimates are for individuals living near cotton gins. Exposure to workers inside the gin would be significantly higher.

(3) Sodium Arsenate

(a) Oral Exposure

Although sodium arsenate has established tolerance levels for use on grapes, no sodium arsenate products are registered for such use; therefore, arsenic residues will not be present due to the use of sodium arsenate.

(b) Dermal Exposure

The Working Group has selected a representative sodium arsenate product containing 3% sodium arsenate as formulated (1.3% as arsenic) which is used in combination with sugar as an ant bait. Dermal exposure to the ant bait would generally be low; however, the directions call for saturating cotton with the 1.3% arsenic solution. In this case, the applicator could

reasonably be expected to contact the wet cotton and be dermally exposed to as much as 30 gm (2 tablespoons) of solution. By calculation this would be 30 gm X 0.013 (% arsenic) = 0.39 gm, or 390 mg of arsenic metal. If 10% is absorbed by a 60-kg woman then the theoretical dermal dose would be: 390 mg X 0.10 = 39 mg; 39 mg / 60 kg = 0.65 mg/kg arsenic from dermal exposure to sodium arsenate.

(c) Inhalation Exposure

Since the product discussed above is used as a very dilute liquid, not a spray, inhalation exposure to sodium arsenate would not be significant.

Total theoretical exposure to sodium arsenate, therefore, would be 0.65 mg/kg (resulting from dermal exposure).

(4) Copper Acetoarsenite

The Working Group has selected a representative copper acetoarsenite (paris green) product which is used as a mosquito larvicide and contains 3.56% arsenic as the metal. The product is ready to use and does not require dilution. If applied aerially, minimal exposure to the applicator is expected. If applied by hand duster, dermal and inhalation exposure may result.

(a) Oral Exposure

Copper acetoarsenite has no registered food uses.

(b) Dermal Exposure

Wolfe et al. (1967) investigated dermal and inhalation exposure resulting from the use of insecticide dusts. Applicators using a power duster to apply 4% malathion dust to beans were exposed to 23 mg/hr dermally and 0.73 mg/hr by inhalation. Assuming the conditions and the equipment were similar, exposure from the use of copper acetoarsenite dust (containing 3.56% arsenic as the metal) can be calculated by incorporating a factor to correct for the difference between the concentration of pesticide in Wolfe's study (4%) and the arsenic concentration in copper acetoarsenite:

$$\text{Correction Factor } \frac{3.56\% \text{ (concentration of arsenic)}}{4\% \text{ (concentration of malathion)}} = 0.89.$$

Therefore, dermal exposure would be equal to:

23 mg/hr x 0.89 (correction factor) x 7-hours (length of work day) x 0.1 (absorption) / 60 kg = 0.24 mg/kg.

(c) Inhalation Exposure

Using Wolfe's information as discussed above, the inhalation exposure for a 7-hour work day is estimated to be:

0.73 mg/hr x 0.89 (correction factor) x 7 hours / 60 kg = 0.08 mg/kg.

Total theoretical exposure for copper acetoarsenite equals:

0.24 mg/kg (due to dermal exposure)
0.08 mg/kg (due to inhalation exposure)
0.32 mg/kg

(5) Calcium Arsenate

For the dermal and inhalation exposure analyses, the Working Group has selected a dust representative product containing 5% calcium arsenate (equivalent to 22.73 gm calcium arsenate per pound).

(a) Oral Exposure

Table 11. Arsenic in Daily Diet Resulting From the Use of Calcium Arsenate

Food Item	Food Factor (percent of total diet)	Tolerance (mg/kg) [40 CFR 180.192]	Contribution to daily intake (mg/kg[a/])
Asparagus	0.23	3.5	0.0081
Beans	1.24	3.5	0.0434
Berries[b/]	0.06	3.5	0.0021
Blackberries[c/]	0.03	3.5	0.0011
Broccoli	0.19	3.5	0.0067
Brussels Sprouts	0.16	3.5	0.0056
Cabbage[d/]	0.49	3.5	0.0172
Carrots	0.55	3.5	0.0193
Cauliflower	0.43	3.5	0.0151
Celery	0.76	3.5	0.0256
Corn	1.19	3.5	0.0417
Cucumbers	0.73	3.5	0.0256
Egg plant	0.32	3.5	0.0112
Kale[e/]	0.14	3.5	0.0049
Melons	1.98	3.5	0.0693
Peppers	0.25	3.5	0.0088
Raspberries[c/]	0.04	3.5	0.0014
Rutabagas	data not available		
Spinach	0.29	3.5	0.0102
Squash[f/]	0.19	3.5	0.0067
Tomatoes	3.34	3.5	0.1169
Turnips	data not available		
Total	12.16		0.4409

a/ Expressed as As_2O_3.
b/ Includes blueberries, boysenberries, and huckleberries.
c/ Includes dewberries, loganberries, and youngberries.
d/ Includes kohlrabi.
e/ Includes pumpkins.

The theoretical quantity of arsenic in the daily diet (see Table 11) due to calcium arsenate equals A X B X C X D / E (see the oral exposure analysis for sodium arsenite) = 0.4409 mg/kg X 1.5 kg X 0.76 X 0.75 / 60 kg = 0.006 mg/kg.

(b) Dermal Exposure

Using Wolfe's observations as discussed in Section III. (4)(C) (Copper Acetoarsenite), dermal exposure would be equal to 23 mg/hr X 1.2 (correction factor for calcium arsenate) x 0.1 (absorption) X 7 hours X 0.38 (percentage of arsenic in calcium arsenate) / 60 kg = 0.12 mg/kg.

(c) Inhalation Exposure

Using Wolfe's information concerning inhalation, exposure would equal 0.73 mg/hr X 1.2 (correction factor) X 7 hours X 0.38 (percent arsenic) / 60 = 0.04 mg/kg.

Total theoretical exposure from calcium arsenate equals:

0.006 mg/kg (through food)
0.12 mg/kg (through dermal exposure)
0.04 mg/kg (due to inhalation exposure)
0.17 mg/kg

(6) Arsenic Trioxide: Oral, Dermal, and Inhalation Exposure

The Working Group has selected a representative arsenic trioxide product which contains 1.5% As_2O_3 and is used for control of mice, ants, and roaches. This bait is used full strength for rodents and diluted with meal for insects. The actual metallic arsenic concentration is 1.136%.

Due to the nature of the product, it is doubtful that oral or inhalation exposure would be significant. Carelessness and ordinary transfer problems could result in a dermal exposure of 2 tablespoons of solution on the hands. Two tablespoons contains approximately 30 gm of formulated product. Dermal exposure would then equal: 30 gms X 0.10 (10% absorption) X 0.0136 (% arsenic) = 0.0408 gm, or 40.8 mg arsenic; 40.8 mg / 60 kg = 0.68 mg/kg arsenic from dermal exposure to arsenic trioxide.

(7) Lead Arsenate

The Working Group has selected a representative lead arsenate product which contains 80% lead arsenate as formulated (equivalent to 0.03 pounds of lead arsenate/gallon) and when diluted according to label directions will contain 0.375 grams arsenic per pint.

Table 12. Arsenic in Daily Diet Resulting From the Use of Lead Arsenate

Food Item	Food Factor (percent of total diet)	Tolerance (mg/kg) [40 CFR 180.194]	Contribution to daily intake (mg/kg[a/])
Apples	1.81	7[b/]	0.1267
Apricots	0.12	7	0.0084
Asparagus	0.23	7	0.0161
Avocados	0.03	7	0.0021
Berries[c/]	0.06	7	0.0042
Blackberries[d/]	0.03	7	0.0021
Celery	0.76	7	0.0532

Cranberries	0.10	7	0.007
Currants[e/]	0.12	7	0.0084
Eggplant	0.32	7	0.0224
Grapes	0.32	7	0.0224
Mangoes	data not available		
Nectarines	0.06	7	0.0042
Peaches	1.03	7	0.0721
Pears	0.32	7	0.0224
Peppers	0.25	7	0.0175
Plums (fresh)	0.23	7	0.0161
Quinces	data not available		
Raspberries[d/]	0.04	7	0.0028
Strawberries	0.19	7	0.0133
Tomatoes	3.34	7	0.2338
Citrus Fruits	4.00	7	0.04
total	13.53	7[f/]	0.7071

a/ Expressed as combined lead.
b/ Equivalent to 3.5 ppm As_2O_3.
c/ Includes huckleberries, boysenberries, and blueberries.
d/ Includes dewberries, loganberries, and youngberries.
e/ Includes gooseberries.
f/ Equivalent to 0.5 ppm As_2O_3.

(a) Oral Exposure

The theoretical quantity of arsenic in the daily diet due to lead arsenate (see Table 12) equals A X B X C X D / E (see oral exposure analysis for sodium arsenite) = 0.354 mg/kg (equivalent to 0.707 combined lead) X 1.5 kg X 0.76 X 0.75 / 60 = 0.005 mg/kg arsenic.

(b) Dermal Exposure

Assuming a one-pint exposure, an applicator would receive 0.375 gm X 0.1 (10% absorption) = 0.0375 gm, or 37.5 mg; 37.5 mg / 60 kg = 0.63 mg/kg arsenic from dermal exposure to lead arsenate.

(c) Inhalation Exposure

Using the estimate of 100 ug/m^3 [based on extrapolation of data from Pinto et al. (1976)] for the concentration of arsenic, and the assumptions stated above, the inhalation exposure could be 100 ug/m^3 X 1.8 m^3/hr X 7 hr = 1,260 ug, or 1.260 mg arsenic; 1.260 mg / 60 kg = 0.021 mg/kg arsenic from inhalation exposure to lead arsenate.

Total theoretical exposure from lead arsenate equals:

0.006 mg/kg (through food)
0.63 mg/kg (dermal exposure)
0.021 mg/kg (inhalation exposure)
0.66 mg/kg

b. Exposure From Treatment of Wood With Arsenical Wood Preservatives and Subsequent Use of Such Products

Arsenical salts are used to protect a variety of wood products against various pests. Arsenic treated wood is used in the construction of homes, in utility poles, fence posts, marine piers, pilings, etc. The majority of wood is treated in closed cylinders under pressure, although there are instances where the preservatives are painted on wood or wood is soaked in solutions containing arsenic.

There are three basic arsenical wood preservatives of commercial importance. These are Chromated Copper Arsenate (CCA), Ammonical Copper Arsenate (ACA), and Fluor Chrome Arsenate Phenol (FCAP). These three wood preservatives are various mixtures made, in part, from either ammonium arsenite, arsenic trioxide (both trivalent arsenicals), arsenic acid, arsenic pentoxide, sodium arsenate, or sodium pyroarsenate (all pentavalent arsenicals). During the formulation process all trivalent arsenic is oxidized to pentavalent arsenic (AWPI 1977).

In the past, arsenical wood preservatives have been referred to under many different names. The various names and relationships of chemical constituants are cross-referenced in Table 13. The percentages listed indicate

the relative proportion of active ingredients in the formulated products. The percentages listed are on the oxide (solids) basis. Table 14 lists typical arsenical formulations available.

*(Arsenic as the metal		9.59%)	

+This is not sold as a formulated product. These chemicals are used to produce an intermediate which is diluted on site to prepare the dilute treating solution. There are no formulated products for ACA preservatives intended for industrial use.

The following is an example of activities associated with industrial wood treatment situations although individual treatment facilities may vary their procedure. In the industrial situation arsenical formulations (concentrates)

are delivered as dusts, liquid concentrates, or pastes. The concentrates are dumped or otherwise metered and mixed with water to form dilute treating solutions of 0.75 to 6.0%, depending on the intended end-use of the treated wood.

Lumber to be treated is stickered (stacked so as to provide spaces for fluid circulation) onto a tram either by machine or hand. The loaded tram is moved (e.g., by rail) into the treatment cylinder. The cylinder door is closed and air in the cylinder evacuated. The cylinder is then filled with treating solution from storage tanks. Pressure is applied to achieve maximum impregnation, a process which may require up to eight hours. The cylinder is emptied by air pressure upon completion of the treatment cycle.

Following removal of the treating solution, the cylinder door is unbolted and pulled open manually. The charged lumber is pulled from the cylinder on its tram to a concrete pad where drippings are collected for reuse. The treated product is removed from the tram by forklift truck for air drying in the yard or kiln. The treated lumber is unstickered by laborers who also stamp on the trademark and stack the lumber for shipment.

Exposure from treatment of wood or its subsequent use can be divided as follows: large scale industrial situations; intermittent application to wood during on-site construction;

exposure from handling, sawing, fabrication, etc., of treated wood products; and exposure to individuals living or working in dwellings containing arsenic-treated wood.

(1) Large Scale Industrial Situations

The regulation of industrial situations to insure worker safety is normally the responsibility of the Occupational Safety and Health Administration. However, Section 4(b)(1) of the Occupational Safety and Health Act (29 U.S.C. S653(b) (1)) provides that "[n]othing in this Act shall apply to working conditions of employees with respect to which other Federal Agencies...exercise statutory authority to prescribe or embrace standards or restrictions affecting occupational safety or health." Since the industrial treatment of wood with arsenic preservatives involves the application of a pesticide, EPA has assumed regulatory responsibility under FIFRA. EPA regulation of arsenic in this use pattern has the effect of pre-empting OSHA. Exposure to inorganic arsenic in the industrial setting could arise through the inhalation and/or dermal routes.

(a) Inhalation Exposure

Several studies have been conducted to determine the amount of arsenic in air in or around treatment plants during the treatment and handling of treated wood (Table 15). Most of this data was presented by Dr. Robert Arsenault during OSHA public hearings in April 1975 on the proposed exposure standard for inorganic arsenic. Dr. Arsenault noted that "a large amount of the data was obtained during damp winter conditions so that the numbers (concentration of arsenic in air) shown are conservative estimates. In dry summer weather, the airborne arsenic from handling lumber, such as in air seasoning yards and during unstickering, would be much higher" (Arsenault 1975).

Table 15. Arsenic in Air During Treatment and Handling of Wood[a/]

Chemical	Activity	Arsenic Concentration in Air (mg/m^3)	Comment
ACA	changing retort charge	0.012	
ACA	boring of treated wood to assay for arsenic	0.001

Table 15 (continued)

Chemical	Activity	Arsenic Concentration in Air (mg/m^3)	Comment
CCA-C	treater loading wood	0.0001	
CCA-C	mixing preservative from dry powder concentrate	0.77 (8 hour TWA for 2 mixes 0.016)	one or two mixes/ day; each mix takes 8.8 to 9 min, operator handles dry wood the remainder of the day, operator used respirator, gloves, and apron

The highest arsenic-in-air values (0.77 mg/m^3) were detected when workers mixed preservatives from dry preservative concentrates. This activity, however, does not continue for extended periods of time. As noted by the author, one or two mixes are prepared each working day with each mixing operation lasting 8.8 to 9.0 minutes. The 8-hour time-weighted average (TWA) for this activity would be approximately 0.016 mg/m^3.

The next highest arsenic-in-air value (0.22 mg/m^3) was detected when workers stacked dry, treated plywood. In order to calculate the theoretical inhalation exposure resulting from this activity, the Working Group assumes that the workers' breathing rate is 1.8 m^3/hr; that all inhaled arsenic will be respirable; that all arsenic reaching the lung will be absorbed; and that the worker will spend the entire working day (8 hours) in the contaminated areas.

Therefore, 0.22 mg/m^3 X 1.8 m^3/hr (breathing rate) = 0.396 mg arsenic/hr; 0.396 mg/hr X 8 hours per day = 3.168 mg arsenic inhaled per day. If we assume the worker to be a 60-kg woman, then exposure would be 3.168 mg / 60 kg = 0.05 mg/kg per day.

The Pacific Biomedical Research Center, University of Hawaii (PBRC Undated), conducted urine analysis studies of workers involved in the industrial application of arsenical (CCA) preservatives. The purpose of the study was to estimate arsenic exposure by monitoring arsenic concentration in urine. The study population was divided into two groups "reference" and "exposed." The reference group corresponded to workers employed in the wood treating industry whose contact with CCA preservatives was "incidental or ambiguous such as clerks, salesman, chemists, plant superintendents, etc." The author concluded there was not a significant difference in residue levels between the "exposed" and "reference" groups. The author did not, however, compare the arsenic concentration of the "reference" group to that of the local population not associated with the preservative (Letter 1978). Mean arsenic values of individuals in the study were as follows: "Exposed" (42 individuals), 0.074 ppm; "Reference" (12 individuals), 0.070 ppm.

The author indicated there may have been an incidental exposure to arsenic by the "reference group." The author also indicated that the plant was almost entirely in the open (Letter 1978).

(b) Dermal Exposure

Little data is available with which to assess potential dermal exposure to arsenic in the industrial situation. If we assume, however, that the actual treatment of wood occurs in closed cylinders under pressure and that there is no exposure to the worker during treatment, then dermal exposure will be limited either to handling preservative concentrates and dilute treating solutions, or to handling wet treated wood after treatment. The following analysis assesses the potential dermal exposure resulting from the use of dust and liquid concentrate formulations.

(i) Handling Preservative Concentrates and Dilute Treating Solutions

a. Dust Formulations

Fluor Chrome Arsenate Phenol (FCAP) preservative formulations are shipped as dusts. The Working Group assumes that workers involved in dumping dust concentrates to prepare dilute treating solutions will each be contaminated with up to 10 grams of dust concentrate. Representative FCAP formulations contain 9.59% arsenic as the metal. The Working Group assumes that 10% of all dust coming in contact with the worker will be absorbed. Therefore, 10 gm (exposure) X 0.0959 (% concentration of arsenic as metallic) = 0.959 gm, or 959 mg; 959 mg X 0.1 (% absorbed) = 95.9 mg. If we assume the worker to be a 60-kg woman, exposure would be 95.9 mg / 60 kg = 1.6 mg/kg arsenic exposure to FCAP concentrate wood preservatives.

b. Liquid Formulations

CCA preservatives are often shipped as liquid concentrates. The Working Group assumes workers involved in preparing dilute CCA solutions could be contaminated with up to 20 ml of liquid concentrate (enough to wet both hands). Representative CCA formulations contain 27.17% arsenic as metallic. The Working Group assumes 10% of all arsenic coming in contact with the worker will be absorbed. Therefore, 20 ml (20 gms) X 0.27 (% arsenic as metallic) = 5.4 gm arsenic reaching the body; 5.4 X 0.1 (% absorption) = 0.54 gm, or 540 mg. If we assume the worker to be a 60-kg woman, exposure would be 540 mg / 60 kg = 9.0 mg/kg arsenic resulting from exposure to CCA concentrate wood preservatives.

Klemmer et al. (1975) studied the amount of arsenic in house dust of persons employed in the wood preserving industry and persons living in homes containing arsenic treated wood. One member of the study group was actually

involved with handling CCA formulated products (Memo 1978b). This home did not contain treated wood and yet contained 1,080 ppm arsenic in house dust, while homes whose residents did not work with arsenic and did not contain treated wood showed levels of 1.1 to 9.1 ppm arsenic in dust. The Working Group assumes the 1,080 ppm arsenic in dust resulted from occupational exposure to CCA wood preservatives and documents the significant nature of worker exposure to arsenic resulting from industrial use of arsenical wood preservatives.

(ii) Handling Wet Treated Wood After Treatment

The Working Group assumes workers in plants using arsenic in the treatment of wood will handle wet, treated wood without gloves or specialized clothing (Memo 1978b) and that the concentration of arsenic on the surface of the wood will be that of the treating solution. If gloves are worn, however, it is assumed these gloves would be made of cloth, would become saturated with treating solution, and would provide no protection against dermal exposure. Treating solutions vary from 0.75 to 6% active ingredient depending on the intended end use of the treated wood (AWPI 1977). Table 14 lists representative preservative formulations. Assuming that the treating solution used will contain 6% active ingredient, the amount of arsenic as metallic in representative dilute treating solutions will be 1.33% for CCA, 1.69% for ACA, and 0.57% for FCAP.

Assuming that the treated wood removed from the treatment cylinders will be dripping wet, that the worker will be contaminated with up to 20 ml (enough to wet both hands) of dilute treating solution, and that 10% of this arsenic-contaminated solution will be absorbed, and using the figure of 1.69% metallic arsenic in dilute Ammonical Copper Arsenate preservatives as an example, the dermal exposure resulting from handling wet treated wood will be as follows: 20 ml (20 gm) X 0.017 (% arsenic as metallic) = 0.34 gm, or 340 mg arsenic reaching the body; 340 mg X 0.1 (% absorption) = 34 mg. If we assume the worker to be a 60-kg woman, the dermal exposure will be 33.8 mg / 60 kg = 0.57 mg/kg resulting from exposure to wet treated wood.

(2) Intermittent Application to Wood During On-Site Construction

Two wood preservative products (containing 7.7% ammonium arsenite, equivalent to 3.26% arsenic) are available for use during the construction of structures built with pressure-treated wood. The products are intended for use on freshly cut ends of previously treated lumber. The directions instruct the applicator (i.e., carpenter) to apply several coats of preservative with a brush or rag mop and to wash

off the solution to avoid staining the hands. Because these products are applied as a viscous liquid, and not as a spray, inhalation exposure to ammonium arsenite would be minimal.

Assuming 20 ml (enough to wet both hands) of solution will reach the skin and or clothing and that 10% will be absorbed before the skin is washed, the applicator could receive 20 ml (20 gm) X 0.033 (% concentration of arsenic) X 0.1 (% absorption) = 0.066 gm, or 66 mg arsenic.

Assuming the applicator to be a 60-kg woman, the applicator would receive 66 mg / 60 kg = 1.1 mg/kg arsenic from dermal exposure to ammonium arsenite.

(3) Exposure from Handling, Sawing, Fabrication, etc., of Treated Wood Products

Exposure to inorganic arsenic under these conditons would arise through the inhalation and/or dermal routes.

(a) Inhalation Exposure

Several studies have been conducted to determine the amount of arsenic in air during cutting and building operations involving treated wood. Table 16 indicates the results from these studies.

The highest value recorded was 0.7 mg/m^3 during the cutting of ACA-treated plywood using a router. The author commented that these results were obtained after only 5 minutes of cutting. In order to conduct this analysis the following assumptions are made:

1. The worker will be involved in sawing related activities for 8 hours a day;
2. The air will not become saturated with arsenic particles in only 5 minutes. The arsenic in air level will be at least double the five minute value, or 1.4 mg/m^3, if this activity continued throughout the working day;
3. The workers breathing rate will be 1.8 m^3/hr;
4. 25% of the arsenic containing dust will be respirable;
5. All arsenic reaching the lung will be absorbed;
6. All of the non-respirable arsenic (not absorbed through lung tissue but present in respiratory system) containing dust will enter the gastro-intestinal tract;
7. Of the 75% non-respirable dust, 75% will be absorbed through the GI tract; and
8. The worker will spend the entire working day in the contaminated area.

Table 16. Arsenic Concentrations in Air During Cutting and Building Operations[a]

Chemical	Activity	Arsenic Concentration in Air mg/m^3)	Comments
ACA	sawing treated wood indoors (10" table saw)	0.24 0.048 0.042 0.062	results obtained during the rainy season and would be much higher in drier months
ACA	shaving the ends of treated poles	0.019 0.123 0.249	
ACA	cutting treated plywood with a router, plywood treated with 0.6 pcf	0.07-0.70	after cutting 5 min
ACA	cutting plywood with skill saw, plywood treated with 0.6 pcf	0.36	after cutting through feet of board (author notes the respirable fraction was 5.3%, or 0.019 mg/M^3)
ACA	handling and hammering treated wood	0.01-0.033 (TWA) 0.01-0.024)	author notes that these values include some cutting opperations
CCA-B	sawing treated studs	0.038	no forced ventilation in building
CCA-B	Construction of foundation panels using treated wood (assembly area)	0.012	no forced ventilation in building
CCA-B	during assembly of treated wood foundations	0.012	no forced ventilation in building
CCA-C	cutting plywood containing 0.6 pcf using a 6" fine-toothed plywood finish blade	0.071 0.097 0.015	this blade produces less dust per cut than a general purpose blade; data collected indoors, no external ventilation

a/ Data from Arsenault (1975).

Therefore 1.4 mg/m^3 X 1.8 m^3/hr (breathing rate) = 2.52 mg/hr; 2.52 mg/hr X 8 hours/day = 20.16 mg/day; 20.16 mg X 0.25 (% respirable) = 5.04 mg reaching lungs; 20.16 mg X 0.75 (% non-respirable) = 15.12 mg/day to GI tract; 15.12 mg X 0.75 (75% GI absorption) = 11.34 mg absorbed through GI tract. Total theoretical arsenic exposure would be:

5.04 (absorbed through lung)
11.34 (absorbed through GI tract)
16.38 mg/day total arsenic exposure per day.

If we assume the worker to be a 60-kg woman, exposure would be 16.38 mg / 60 kg = 0.27 mg/kg.

(b) Dermal Exposure

In order to determine the amount of arsenic which can enter the system, it is first necessary to determine how much arsenic is available on the surface of the treated wood. Several studies are available showing the amount of arsenic removed when dry, treated wood is wiped with a sponge, wet human hand, dry human hand, etc. Table 17 summarizes that data available on arsenic content of wood dust, splinters, etc. It is also desirable to determine the amount of arsenic which can be leached from wood when exposed to damp or flooded conditions. Table 18 summarizes the available data showing the amount of inorganic arsenic

which can be leached from treated wood. If the treated wood, e.g. as used in houses, is subjected to water from rain, flooding, etc., this additional arsenic would then be available and of importance when considering dermal exposure.

A representative exposure situation would be that resulting from the construction of homes using arsenic-treated wood. A typical activity would be the carrying, positioning, and nailing of treated plywood in the construction of floors of domestic dwellings. For purposes of this analysis the following assumptions are made:

1. The worker will work with four by eight foot sheets (32 sq ft) of arsenic-treated plywood;
2. The treated wood will be positioned and nailed at the rate of 7 sheets per hour;
3. The worker will work with the treated wood for 8 hours per day;
4. The worker will come in contact with 15% of the surface of the wood; and
5. The worker's hands will become damp with perspiration and could remove up to 0.529 mg/ft^2 arsenic (Dreher 1974).

Therefore, the worker will handle 224 sq ft of wood per hour and 1,792 sq ft during the course of an 8-hour day. If the worker's skin comes in contact with 15% of the wood, then the worker would contact 15% X 1,792 sq ft, or 268.8 sq ft of arsenic-treated wood per day. As shown by Dreher (1974) [see Table 17], a damp human hand can remove up to 0.529 mg arsenic per square foot of wood. If the worker contacts 268.8 sq ft, a total of 142.2 mg arsenic will come in contact with the skin per day. If the worker is wearing short pants and kneels on the wood during construction exposure would be higher. Assuming 10% absorption, 14.22 mg of arsenic will enter the body. If we assume the worker to be a 60-kg woman, exposure would then be calculated as 14.22 mg / 60 kg = 0.24 mg/kg resulting from contact with arsenic-treated wood. Fahlstrom et al. (1967) studied the leaching rate of CCA-treated wood samples. The authors found that treated wood leached with distilled water liberated 10.5% of its arsenic in two days. It is possible that dermal exposure to treated wood as discussed above would be significantly higher if treated wood was subjected to rain prior to or during construction.

(4) Exposure to Individuals Living and/or Working in Dwellings Containing Arsenic-Treated Wood

Exposure to inorganic arsenic resulting from living or working in dwellings containing arsenic-treated wood occurs through the inhalation and dermal routes.

(a) Inhalation Exposure

Two studies [NCMA (1976) and Sleater and Berger (1977)] are available which discuss the amount of arsenic in air of dwellings containing arsenic-treated wood. Table 19 summarizes the results from these studies.

The NCMA (1976) study was conducted by an independent testing laboratory (Froehling & Robertson, Inc.) for the National Concrete Masonry Association. In this test the air of two homes was sampled using a high volume air sampler fitted with an 8 x 10 inch fiberglass filters. A volume of 4,860 cubic feet of air was passed through the filters at each location. The tests were conducted during normal living activities at each location. Residents were in and out, cleaning, cooking, etc. Chemical analysis of the samples was conducted using the silver diethyldithiocarbamate method.

The Sleater and Berger (1977) study was conducted by the National Bureau of Standards (NBS). In this study the

air of eight homes were sampled for arsenic content. The samples were collected using high volume air samplers fitted with fiberglass or paper filters of approximately 0.3 micron porosity. Between 200 and 2,000 cubic meter of air per site was sampled deperding upon accessibility. Chemical analysis of the samples was conducted using the silver diethyldithiocarbamate method.

Both homes monitored by Froehling & Robertson (NCMA 1976) were also monitored by NBS (Sleater and Berger 1977), with markedly different results. Froehling & Robertson (NCMA 1976) monitored the houses on May 27, 1976, and recorded arsenic in air values of 0.6 to 3.6 mg/m^3. NBS monitored the houses in mid-December and mid-March of 1976 and recorded arsenic in air values of 0.002 to 0.031 ug/m^3.

In its report NBS commented concerning the markedly varying results of the NBS versus Froehling & Robertson. Of the differences in findings the authors note, "The disparity between the arsenic in air levels reported [refering to the NBS figures] cannot be explained at this time. It is clear the NBS has not confirmed the findings reported by NCMA, but neither has NBS refuted these findings." The authors note that a thorough cleaning of the residence prior to their visit could explain the lower levels of arsenic found by NBS. The results in Table 19 represent data from only seven

homes containing arsenic-treated wood. A survey of more treated homes could reveal much higher or lower levels of arsenic in air.

In order to calculate the theoretical arsenic exposure through inhalation, the following assumptions are made:

1. breathing rate to be 1.0 m^3/hr (resting mode) or 1.8 m^3/hr (active mode);
2. 100% of all arsenic in air will be respirable. A figure of 25% respirable was used when calculating inhalation exposure resulting from the cutting of arsenic-treated wood as discussed earlier. When cutting wood the fine particles of wood containing arsenic would become airborne but would probably not be completely respirable. In the case of a domestic dwelling, however, arsenic-containing dust would be of much smaller particle size and could therefore be respirable;
3. 100% of all respirable arsenic will be absorbed.
4. The resident of the dwelling will be present for 16-24 hours per day. It should be noted that, in the case of teratogenicity, the period of time during which the developing fetus is at risk may be

relatively short. Hood and Pike (1972), Hood et al. (1977; undated), etc., have demonstrated that arsenic exposure on one or two critical days of organogenesis will result in malformations. While it would be unreasonable to assume that a woman of child bearing age would remain in the arsenic treated home for 24 hours, day in and day out, it is not unreasonable to assume the woman to be present for any one continuous 24 hours period. If the developing fetus were to undergo a critical phase of organogenesis while the mother was present in a house containing arsenic-contaminated air it is not unreasonable to assume this exposure to continue for up to 24 hours.

Using the figure of 3.6 ug/m^3 (NCMA dwelling A) as a worst case situation and assuming the woman to be present in the house for 24 hours and that 16 of the 24 hours will be in the active mode (respiratory rate of 1.8 m^3/hr) and 8 hours in the resting mode (1.0 m^3/hr) exposure would be:

1.8 m^3/hr (active breathing rate) x 16 hours = 28.8, plus 1.0 m^3/hr (resting rate) x 8 hours = 36.8m^3/hr; 36.8 m^3/hr x 3.6 ug/m^3 (arsenic content in air) = 132.5 ug/24 hours or 0.132 mg/24 hours.

Assuming the resident to be a 60-kg woman, the resident would be exposed to 0.133 mg/60 kg = 0.002 mg/kg/day as a result of breathing arsenic-contaminated air.

Using the figure of 0.002 ug/m^3 (Sleater and Berger dwelling 8) as a best case situation and assuming the woman to be present in the house for 16 hours and that 8 hours of the 16 will be in the active mode (respiratory rate of 1.8 m^3/hr) and 8 hours in the resting mode (1.0 m^3/hr), exposure would be 7 x 10^{-7} mg/kg/day (trace).

Table 19. Arsenic in air of building constructed with wood pressure-treated with arsenical wood preservatives

(b) Dermal Exposure

Dermal exposure could arise from direct contact with treated wood, or contact with arsenic-containing dust produced from or by treated wood.

(i) Direct Contact with Treated Wood

Tables 17 and 18 summarize relevant data concerning the amount of arsenic available in splinters, on the surface of treated wood, and the amount of arsenic which can be leached by water. The highest rates are listed in Table 21.

Table 21.

Source	Amount of arsenic	Comment	Reference
Greenish salt-like formation on wood	3,050 ppm	taken from treated wood in a home	NCMA (1976)
Splinter	14,000	"	Sleeter and Berger (1977)
Wood wiped by damp human hand	0.029 mg/ft^2	wood 2 yrs old	Dreher (1974)
Treated CCA wood soaked in deionized water	146.3 mg/ft^2	wood soaked for 28 days	Memo (1974)
"	43.2 mg/ft^2	wood soaked for 7 days	"

The Agency assumes that, based on the above data, a homeowner coming into contact with treated wood after flooding would experience the greatest potential exposure. It is conceivable that a home basement could be subjected to flooding for long periods of time. When pressure-treated wood, such as CCA-treated wood, is used in the construction of foundations, a polyethylene film is installed between the soil and the treated wood foundation. The American Wood Preservers Institute (AWPI 1976) says of this polyethylene film, "It should be understood that the polyethylene film serves as a water deflector and is not intended as a water proof membrane. The film will direct ground water downward and away from the wall to the drainage area below. Design of the AWWF (all weather wood foundation) anticipates that the plywood wall may become wet in some cases...."

For purposes of analyzing potential arsenic exposure resulting from the flooding of home basements constructed of arsenic-treated wood, the following assumptions are made:

1. The basement will be continuously flooded for 7 days;
2. The basement will be 30 feet long, 30 feet wide, and 8 feet high and will be flooded to a depth of 4 feet. This will result in a total of 480 sq. ft. exposed to flood waters;
3. When the flood water recedes 75% of the leached arsenic will be deposited onto the walls or floor;
4. The homeowner will clean the basement after the flood and will require not more than one day to complete the task;
5. 10% of the residual arsenic will come into contact with the skin; and
6. 10% of all arsenic coming into contact with the skin will be absorbed.

Therefore, 480 sq ft (amount of wood subjected to leaching) X 43.2 mg/ft^2 (amount of arsenic leached per sq ft [Memo 1973]) = 20,736 mg leached from wood; 20,736 mg X 0.75 (% of leached arsenic deposited on to walls or floor = 15,552 mg arsenic; 15,552 mg X 0.1 (% coming in contact with the skin) = 1,555 mg arsenic; 1,555 mg X 0.1 (% absorption) = 155 mg arsenic absorbed. Assuming the person at risk to be a 60-kg woman, exposure would be 155 mg / 60 kg = 2.59

mg/kg resulting from exposure to arsenic-treated wood after flooding.

If flooding were to continue for 28 days exposure would be 8.8 mg/kg.

(ii) Contact with Arsenic-Containing Dust Produced from or by Treated Wood

Table 20 summarizes the relevant data concerning the amount of arsenic available in the dust of homes containing arsenic-treated wood. The Working Group assumes that the homeowner can be dermally exposed with up to 10 grams of dust during the sweeping of arsenic-laden dust, that this dust will contain 1,640 ppm arsenic (Table 20), and that 10% of all arsenic will be absorbed. Therefore, 10 gm of dust X 1.64 mg arsenic/gm of dust (equivalent to 1,640 ppm) = 16.4 mg arsenic coming in contact with the skin. Assuming 10% is absorbed, the homeowner will assimilate 1.64 mg of arsenic. If the resident is a 60-kg woman, the dosage of arsenic would 1.64 mg / 60 kg = 0.03 mg/kg due to dust from arsenic-treated wood.

Total theoretical dermal exposure will be the sum of direct contact with treated wood and contact with dust containing arsenic produced from or by treated wood:

3.45 mg/kg (from flooded basements)
0.03 (contact with dust)
3.48 mg/kg total theoretical dermal exposure.

C. Summary

Table 22 summarizes the available information concerning exposure of a 60-kg woman to arsenic resulting from the use of inorganic arsenical pesticides. The only registered use for sodium pyroarsenate, ammonium arsenite, and arsenic pentoxide is for wood preservation situations; the levels of exposure to these forms of inorganic arsenic are listed under this category. Inorganic arsenical wood preservatives are commonly sold in three formulations (ACA, CCA, and FCAP). Exposure estimates for inorganic arsenical wood preservatives, as detailed in Table 22, were not calculated for each formulation/use situation; however, exposure estimates would be comparable for each use situation.

Human exposure as discussed in this document refers only to exposure resulting from the use of inorganic arsenical pesticides. Other sources of exposure to inorganic arsenic (i.e. smelters, coal-burning plants, volcanic debris) which contribute to the total exposure of the human population have not been discussed. This total exposure to inorganic arsenic would be higher than the exposure from pesticide use alone.

Table 22. Summary of the Total Theoretical Exposure To Inorganic Arsenic Resulting From the Use of Inorganic Arsenical Pesticides

Chemical or Use Situation	Total Theoretical Exposure (for a 60-kg Woman in mg/kg)
Agricultural Situations	
Sodium Arsenite	5.5
Arsenic Acid	2.72
Sodium Arsenate	0.65
Copper Acetoarsenite	0.32
Calcium Arsenate	0.17
Arsenic Trioxide	0.68
Lead Arsenate	0.66
Wood Preservative Situations (Sodium Pyroarsenate (Arsenic Trioxide, Arsenic Pentoxide, Sodium Arsenate, Arsenic Acid, and Ammonium Arsenite)	
Large Industrial Situations	
Inhalation Exposure	0.05
Dermal Exposure	0.57 - 9.0
Intermittent Application to Wood During On-Site Construction	
Dermal Exposure to Ammonium Arsenite	1.1
Exposure From Handling, Sawing, Fabricating, etc, of Treated Wood Products	
Inhalation Exposure	0.27
Dermal Exposure	0.24
Exposure To Individuals Living or Working In Dwellings Containing Arsenic-Treated Wood	
Inhalation Exposure	$7X10^{-7}$ - 0.002
Dermal Exposure	0.03 - 2.59

IV. SUMMARY OF SCIENTIFIC EVIDENCE TO SUPPORT REBUTTABLE PRESUMPTION.

A. Relation Between Arsenate and Arsenite

The inorganic arsenical pesticides discussed previously all have the element arsenic in common. Studies in the following sections describe oncogenic, mutagenic, teratogenic, and other adverse effects of inorganic arsenic salts and/or their metabolites. The Working Group contends that the effect(s) observed are typically due to arsenic from the arsenate or arsenite ions released upon dissociation of the salt in various aqueous systems. The Agency notes that inorganic arsenic salts (i.e. sodium arsenate, sodium arsenite) will, to a greater or lesser extent, dissociate.

40 CFR 162.11(a)(3) provides that "A rebuttable presumption shall arise if a pesticide's ingredient(s), metabolite(s), or degradation product(s) meet or exceed any of the...criteria for risk." The term "degradation product" is defined by 40 CFR 162.3(l) to mean "a substance resulting from the transformation of a pesticide by physico-chemical, or biochemical means," and the term "metabolite" is defined by 40 CFR 162.3(w) to mean "any substance produced in or by living organisms by biological processes and derived from a pesticide." The liberated arsenate and

arsenite ions of the inorganic arsenicals discussed in this document can be considered ingredients of the arsenical pesticides or are encompassed by the 40 CFR definitions of "degradation product" and/or "metabolite."

For purposes of issuing an RPAR, the Agency has made the following determinations:

1. If any form of trivalent inorganic arsenic (arsenite) produces any given chronic effect, it must be assumed that all forms of trivalent inorganic arsenic are capable of producing similar effects, because they all dissociate to the common arsenite ion. This rationale will also prevail for pentavalent inorganic arsenicals (arsenates). The Agency has determined that when a rebuttable presumption is issued for any one pesticide containing arsenate or arsenite, an RPAR will be issued for all pesticides containing arsenate or arsenite, respectively;

2. In addition, as discussed in Section I.J, there is strong evidence that trivalent forms of inorganic arsenic will be oxidized to a pentavalent state in humans, other animals, and the environment. The pentavalent forms of arsenic would be considered degradation products or metabolites (biologically mediated) of trivalent arsenic (arsenites) and, therefore, the trivalent form of arsenic will be subject to regulation based on information from studies on its pentavalent metabolites. The Agency assumes, therefore, that the effects observed in tests using trivalent

arsenites may be due to arsenite, arsenate, or both. The EPA has determined that when an RPAR is issued for any one pesticide containing arsenic in the pentavalent form (arsenate), an RPAR will be issued for all arsenical pesticides containing arsenite, as well as for those containing arsenate; and

3. As discussed in Section I.J, there is also evidence that pentavalent arsenic (arsenate) can be converted to trivalent arsenic in vivo. Under these conditions, arsenite would be a metabolite of arsenate and therefore arsenate will be subject to regulation based on information from studies on its trivalent metabolites. The Agency has determined that when an RPAR is issued for any one pesticide containing arsenic in the trivalent form (arsenite), an RPAR will be issued for all arsenical pesticides containing arsenate, as well as for those containing arsenite.

B. Chronic Toxicity

The following adverse effects of inorganic arsenic have been found to exceed the criteria for issuance of a rebuttable presumption.

(1) Oncogenic Effects

40 CFR Section 162.11(a)(3)(ii)(A) provides that a rebuttable presumption shall arise if a pesticide's

ingredient(s) "(i)nduce(s) oncogenic effects in experimental mammalian species or in man as a result of oral, inhalation, or dermal exposure...." Section 162.3(bb) defines the term oncogenic as "the property of a substance or a mixture of substances to produce benign or malignant tumor formation in living animals." Epidemiological studies, in conjunction with confirmatory animal tests, provide the best evidence that an agent is a human carcinogen. Albert et al. (1977) noted that "of the chemical agents that are generally accepted to have produced human cancer, all but one [arsenic], produced a carcinogenic response in rats and/or mice...in the same organ as in humans when tested by the appropriate route of exposure." Since arsenic is unique in this respect (Frost 1967; NAS 1977b), the Agency has relied primarily on human epidemiology studies in its assessment of the oncogenicity of inorganic arsenicals.

The information and background data included in the following portion of the position document have been taken from the EPA Carcinogen Assessment Group's Preliminary Report on Inorganic Arsenic (EPA 1978). Studies discussed in this report show that both the trivalent (arsenite) and pentavalent (arsenate) forms of inorganic arsenic act as oncogenic agents. For this reason the

Agency concludes that, without exception, a rebuttable presumption against registration exists for all inorganic arsenical pesticides based on the oncogenic effects criteria. The various forms of inorganic arsenic are enumerated in Section I.A.

Both the National Academy of Science (NAS 1977b) and the Occupational Safety and Health Administration (OSHA 1978) have conducted extensive reviews of the literature concerning the oncogenicity of arsenic. The reader is referred to the NAS and OSHA publications for additional epidemiological studies concerning the oncogenicity of arsenic.

Chronic exposure of humans to inorganic trivalent arsenic from drinking water, medicinal preparations, pesticides, non-ferrous metal smelters, and a gold mine operation has resulted in abnormal pigmentation, keratosis, and skin cancer as well as cancer of the lung and liver in some cases. Chronic exposure of pesticide-manufacturing workers and orchard workers using lead arsenate has resulted in excess incidences of lung cancer. Although concurrent exposure to other chemicals may have contributed to the observed incidence of cancer, the weight of evidence suggests that chronic exposure to either trivalent or pentavalent arsenic can induce cancer. This conclusion is supported by toxicological and mutagenesis studies [see Sections I.J and IV.B.(2)] which show that the two forms of arsenic have similar effects, although trivalent arsenic is more potent than the pentavalent form.

A large body of literature shows that chronic arsenic exposure results in symptoms of abnormal skin pigmentation, keratosis, circulatory disorders leading to gangrene, squamous cell carcinomas, and basal cell epitheliomas of the skin as well as bronchial carcinoma and liver vascular sarcomas (angiosarcomas). These various symptoms result from several exposure situations, summarized below; the valence state of the arsenic compound involved and concomitant exposure to other agents are also considered.

(a) Medical Exposure

Comprehensive reviews by Neubauer (1947), the National Academy of Sciences (NAS 1977b), and Stellman and Kabat (1978) document the occurrence of skin cancer and its early symptoms in patients treated for psoriasis and other conditions with potassium arsenite (Fowler's solution) in the United States before 1950. Since pentavalent arsenic salts are generally not effective therapeutic agents, little information is available concerning their chronic effects from this usage pattern. The evidence indicates that continued administration of potassium arsenite causes circulatory disturbances of the skin, hyperpigmentation, keratosis, skin cancer and, rarely, liver (hepatic) angiosarcoma. Neubauer (1947) found that, in 143 patients with medical skin cancer who had been treated with trivalent arsenic, the latent time between first administration of therapy and the onset of superficial epithelioma ranged between 3 and 40 years, with an average of 18 years. The epitheliomas typically developed on patches of keratotic areas of skin, sometimes after the

keratosis had been present for several years; but they also developed on healthy areas of the skin and on patches of psoriasis.

(b) Drinking Water Exposure

Chronic arsenical poisoning, including skin cancer and a gangrenous condition of the hands and feet called Blackfoot's disease, has occurred in several communities exposed to arsenic in drinking water. The best-documented instance of such arsenical poisoning is in Taiwan (Yeh et al. 1968; Yeh 1963; Yeh 1973; Tseng et al. 1968; Tseng 1977). In a house-to-house survey of 40,421 people in 37 villages along the southwest coast of Taiwan, Tseng et al. (1968) found that the prevalence of skin cancer, hyperpigmentation, and keratosis each correlated with the arsenic content of the water. The highest range of concentrations was greater than 0.6 ppm, and the lowest range was less than 0.29 ppm. From a general survey of these inhabitants, the prevalence rate for arsenical skin cancer was 10.6 per 1,000 residents in 1965. The skin cancer rate for well water containing >0.60 ppm was 21.4 per 1,000 people, while at <0.29 ppm it was 2.6.

The sources of drinking water for these areas were deep artesian wells, used from 1910/20 until 1966, when a tap water supply was installed. The concentrations of arsenic in the water ranged from 0.01 to 1.82 ppm (median range was 0.4 ± 0.6 ppm). The chemical form of arsenic in the water was not determined, but it may have been either trivalent (because the well-water is probably anaerobic) or

a methylated arsine (because the authors observed a combustible gas [perhaps methane] bubbling from the water storage tanks). Attempts to measure the arsenate to arsenite ratio of the water have been confined to measurements in a United States laboratory of a sample shipped from Taiwan with no special precautions to preserve the speciation occurring at the collection point (Irgolic 1978). The arsenate to arsenite ratio in two samples was 10 to 1 and 7 to 1, with a total arsenic concentration of approximately 0.6 ppm. Since the native water is likely to be anaerobic and since oxidation probably took place to some degree in transit to the analysis laboratory, the ratio in the natural water is probably less than 10 but cannot be assessed at this time. Therefore, from the best available information, people in that region of Taiwan could have been exposed to both trivalent and pentavalent arsenic compounds.

Assessing the Taiwan situation is more complex than simply identifying the two oxidation states of arsenic, as reported recently by Lu et al. (1975, 1977a, 1977b). These workers have observed non-arsenical fluorescent compounds in water samples from the areas where Blackfoot disease is endemic and have identified one of the fluorescent components as an alkaline hydrolysate of ergotamine, lysergic acid, or a related compound (Lu et al. 1977b). They have also shown that one of the fluorescent components produced abnormalities in developing chick embryos (Lu et al. 1977a). It is not known whether ergotamine was the compound that produced these abnormalities.

Two other areas of high levels of arsenic in drinking water are the Cordoba province of Argentina (Bergoglio 1964) and the town of Reichenstein in Selesia (Neubauer 1947). The former is a large farming area with natural geologic deposits of arsenic-containing rock, and the latter is adjacent to a former gold mine with arsenic-containing ores. Skin cancer and other disorders were observed in a large number of people in the areas of Cordoba with high levels of arsenic in the water. The arsenic contamination of ground water in Reichenstein is believed to be responsible for the widespread symptoms in the local population of melanosis and keratotic warts on hands and fingers, perforation of the nasal septum, mouth ulcers, gastrointestinal tract disorders, and skin cancer. The chemical form of arsenic in the drinking water was not stated in these reports.

(c) Exposure in Smelters

Ore containing non-ferrous metals (copper, zinc, and lead) also has high concentrations of arsenic that must be removed in order to produce quality metals. At the smelters producing these metals, arsenic dust is found in the air largely in the form of arsenic trioxide [As_2O_3] (NAS 1977b) or perhaps arsenic sulfides [As_2S_2 or As_2S_3] (Smith et al. 1976). But, as emphasized by Arsenault (1977), the workers are concurrently exposed to sulfur dioxide (Lee and Fraumeni 1969), as well as to sulfates and sulfites (Smith et al. 1976). Occupational

studies of smelter workers have been reported in the United States by Pinto and Bennett (1963), Lee and Fraumeni (1969), Milham and Strong (1974), and Pinto et al. (1977), and in Japan by Kuratsune et al. (1974) and Tokudome and Kuratsune (1976). Excess rates of lung cancer among the employees with the highest exposure to arsenic have been found consistently in these studies, although the early Pinto and Bennett study (1963) did not show a significant difference between exposed and control groups. The consistency of these findings in different smelter environments leaves little doubt that arsenic trioxide is at least a major contributor to the incidence of lung cancer in heavily exposed workers. Lee and Fraumeni (1969) have shown that lung cancer rates are also correlated with sulfur dioxide exposure, but there were no populations which had exclusive exposure to either of the agents. Lung cancer mortality among patients in a southern Rhodesian gold mining district has been studied by Osburn (1969). He found that of 37 people who died over 15 years, 13 also had hyperkeratosis characteristic of chronic arsenical poisoning. All but one patient had known exposure to dust containing arsenic from the mines.

(d) Exposure to Inorganic Arsenical Pesticides

Both trivalent and pentavalent arsenic are used in pesticide products. Reports of skin, lung, and liver

cancer in people exposed during the manufacture and use of these compounds have been published. In manufacturing plants an excess of respiratory cancer was reported by Ott et al. (1974), Ott (1976), and Hill and Faning (1948). The use of inorganic arsenical pesticides has been associated with cancer of several organs in German and French vintner workers by Roth (1956, 1957a, 1957b, 1957c, 1958), Denk et al. (1969), Thiers et al. (1967), Braun (1958), von Pein (1943), Galey et al. (1963), and Petres and Hagedorn (1975).

(i) Exposure in Pesticide Manufacturing Plants

A study of factory workers in the Dow Chemical Company's pesticide manufacturing plant (Ott et al. 1974) showed excess rates of respiratory and lymphatic cancer. The authors found that the rate of respiratory cancer correlated with the inorganic arsenic exposure level. Although there was minor exposure in a building where the arsenic trioxide starting material was loaded into the equipment, the workers were predominantly exposed through bagging to finished calcium and lead arsenate products. Production of arsenic compounds over the entire 37 years of operation was estimated to be 59% lead arsenate, 34% calcium arsenate, 5% copper acetoarsenite, and 2% magnesium arsenate.

These effects can therefore be ascribed to pentavalent, rather than to trivalent arsenic. Exposure to powdered sulfur and dry lime sulfur also occurred (Ott et al. 1974).

In a British factory manufacturing a sodium arsenite sheep dip compound, Hill and Faning (1948) observed a high rate of lung and skin cancer among workers directly handling the compound.

(ii) Exposure via Use of Pesticides

Inorganic arsenic pesticides were used on grapes in France and Germany between the early 1920s and 1942. Roth (1957b) reported the occurrence of chronic arsenical poisoning, including sequelae of skin and lung cancer, in French and German vintners. (These same sequelae of skin and lung cancer have also been observed in patients medicinally treated with inorganic arsenic.) In addition, a rare form of liver cancer, hemangio-endothelioma, was observed in the vintners. The most complete description of the cases is in a series of papers by Roth concerning the Mosel River Valley wine-growing area, but chronic arsenical poisoning also occurred in the upper Baden Valley, where it was called the "Kaiserstuhl Sickness" (Petres and Hagedorn 1975), and in the Rhine, Pfalz, and Wachau regions in Germany and the Beaujolais region in France (Galey et al. 1963; Thiers et al. 1967).

As Roth (1958) points out, not all wine-growing regions in Germany used inorganic arsenical insecticides because the particularly voracious insect that was susceptible to arsenic poisoning was not present everywhere. This insect is Cochylis (or Clysia) ambiguella, also known as the hay worm and sour worm (Thiers et al. 1967; Stellwaag 1928). It has two generations per growing season. The first caterpillars appear in June when the hay is harvested, and the second generation appears in late summer. A detailed description of these insects is given by van Emden (1936).

A dust of calcium arsenate, applied every two weeks in early summer, was particularly effective against hay and sour worms (Stellwaag 1928). This mixture contained calcium and As_2O_5 (pentavalent arsenic) with an arsenic concentration of 10 to 15%, and was called Sturm's Dusting Material by some (Frohn 1938). This technique was not popular for long because of the extremely acute reaction of the vintners to the dust, but it was used in cases of severe infestation. Another arsenic preparation, applied as a spray, was a mixture of copper acetoarsenite (or paris green), also known by the trade names of "Selesia Green" and "Urania Green," which is a copper-lime solution (Stellwaag 1936). The copper-lime solution alone controls the common fungus

Peronspora, and the combination spray (including paris green) is effective against both the fungus and the hay and sour worms. The vintners were therefore exposed to both trivalent arsenic, as copper acetoarsenite, and pentavalent arsenic, as calcium arsenate, during the growing season.

A second, and perhaps major source of vintner exposure to inorganic arsenic was by drinking the "house wine," prepared from the second pressing of grape skins. Stellwaag (1928) states that, during the fermentation process, a large fraction of the arsenic was removed from the liquid by transformation into arsenic sulfide, which was subsequently absorbed by the yeast. The form of arsenic should, therefore, appear in the "house drink," which was consumed in quantities of 1 to 3 liters per day during the warm season. Graceffius (1977a) has shown that, during the fermenting of grape juice, the final ratio of trivalent to pentavalent arsenic was about 4 to 1 regardless of whether the starting material was all trivalent or all pentavalent, and that the fermenting process tends to convert arsenic of both valences predominantly to the trivalent form.

In summary, the inorganic arsenic responsible for the chronic poisoning and cancer in the vintners was a complicated mixture of pentavalent and trivalent compounds, perhaps combined with sulfur.

The Wenatchee Valley in central Washington is another site where arsenical pesticides have been used for many years in the form of lead arsenate in apple orchards. Nelson et al. (1973) found no excess rate of lung cancer in orchardists, but the National Institutes of Occupational Safety and Health (NIOSH 1975) recently re-examined the mortality statistics in the state of Washington and found a statistically significant increase of respiratory cancer.

An epidemiological study of carpenters in Hawaii, who were exposed to pentavalent arsenic wood preservatives for an unknown period of time, was published by Budy and Rashad (1976). The rate of respiratory cancer among carpenters who died between 1970 and 1973, as compared to matched non-carpenter control groups, was not significantly different than the corresponding rate for those who died between 1948 and 1951. In the earlier years, about 5% of the wood was treated with arsenic, whereas in the early 1970s about 50% of the wood was so treated. Uncertainty about the degree and duration of exposure makes this study difficult to interpret.

(e) Summary of Human Exposure Studies

Chronic exposure of humans to sufficiently high doses of arsenic in several situations has produced abnormal

pigmentation, keratosis, and skin cancer as well as cancer of lungs, liver, and perhaps other sites. The adverse effects resulting from this exposure have been consistently the same as those produced by medicinal use of potassium arsenite; and, with two exceptions, the exposures have all involved trivalent arsenic. Therefore, it is extremely likely that trivalent arsenic is a human oncogen. Two situations of arsenic exposure, in which the predominant form of arsenic is pentavalent, have produced lung cancer; these are the Dow pesticides manufacturing plant and the lead arsenate exposures in Wenatchee, Washington. Although it is difficult to rule out other chemicals as the causative agents, these two situations furnish ample cause for concern that pentavalent arsenic may also be oncogenic.

(f) In Vitro Studies Suggestive of Oncogenic Potential

Although in vivo animal studies have not yet confirmed inorganic arsenic to be oncogenic, several positive in vitro cell transformation studies have been published. For certain cell lines, in vitro transformation from primary (normal, diploid) cells to cancerous ones is a good indicator of the carcinogenic potential of a compound. The best validated test systems are the Syrian hamster embryo cell system of Dr. R. Pienta (NCI) and the Chinese hamster ovary cell system used by Dr. DiPaolo (NCI).

These are short-term testing systems for oncogenicity and produce few, if any, false positives.

Casto et al. (1976) showed that sodium arsenite induced the transformation of Syrian hamster fetal cells that were seeded to form colonies. Arsenite also enhanced the frequency of simian adenovirus (SA7) transformed foci. Spontaneous transformations were not observed in the controls. The increase in SA7 transformation frequency was not due to selective toxicity, since there was a 2- to 3-fold increase in treated cultures in the number of foci per plate.

Casto (Letter 1977a) elaborated on this work (described above) with data that supported the conclusion of in vitro transformation of these hamster embryo cells by sodium arsenite. At a concentration of 1.2 ug/ml, transformation was enhanced 2.4 times over the background level (significant at 5% level). The responses were dose-related.

Casto et al. (1977) assayed Syrian hamster embryo cells for enhancement of viral transformation by an inorganic salt of arsenic (sodium arsenite). Hamster cells were exposed to arsenic either 18 hours before or 5 hours after the addition of simian adenovirus (SA7). Survival was determined by cloning methods, and viral transformation

was detected by focus assay. There was a significant increase in the relative transformation frequency and in the absolute number of SA7 foci per plate. This indicates the increase was not due to selective toxicity. Enhancement occurred at concentrations that did not affect cloning efficiency.

Moore (1976) used Fischer rat embryo cells infected with Rauscher leukemia virus and a cloned cell line of mouse BALB/3T# to assay for in vitro cell transformation by arsenic trioxide. A positive control (3-methylcholanthrene) was used. The results for the rat and mouse cell systems were negative. The Fischer rat embyro system is not validated.

(g) Conclusion

EPA concludes that sufficient epidemiological data exists to show that both trivalent inorganic arsenic (arsenite) and pentavalent inorganic arsenic (arsenate) act as oncogenic agents in humans. This position is in agreement with that of the Occupational Safety and Health Administration (OSHA 1978) who conclude "(t)hat there is virtually no dispute as to the carcinogenicity of trivalent arsenic," and that, on the basis of the available evidence, "pentavalent arsenic should be regulated as a human carcinogen." Section I.J presents strong evidence of the ability of inorganic arsenic to interconvert in vivo (arsenite to arsenate and arsenate to arsenite). As discussed in Section I.J, this interconversion makes

trivalent arsenic a metabolite of pentavalent arsenic and pentavalent arsenic a metabolite of trivalent arsenic.

Therefore, in the case of pentavalent inorganic arsenic, the Agency stresses that the RPAR is being issued for two reasons: 1) that pentavalent arsenic is an oncogen and 2) that pentavalent arsenic is reduced in vivo to trivalent arsenic, which also acts as an oncogen. The Agency concludes that either characteristic of pentavalent arsenic is sufficient criterion for the issuance of an RPAR.

The basis for issuance of an RPAR for trivalent inorganic arsenic is similar: 1) that trivalent arsenic is an oncogen and 2) that trivalent arsenic is oxidized in vivo to pentavalent arsenic, which also acts as an oncogen.

(2) Mutagenic Effects

40 CFR Section 162.11(a)(3)(ii)(A) provides that "A rebuttable presumption shall arise if a pesticide's ingredient(s), metabolite(s), or degradation product(s) ...induces mutagenic effects, as determined by multi-test evidence."

Studies discussed in this report (and summarized in Table 23) show that both trivalent (arsenite) and pentavalent (arsenate) forms of inorganic arsenic can act as mutagenic agents. The EPA concludes that these studies represent multi-test evidence and that, without exception,

V 4 3 / 2 0 2 0 C 1 8 7 8

Table 23. Summary of Studies of Inorganic Arsenic Mutagenicity.

Study	Author(s)	Chemical(s)	Cell Type	Effects
1. Point Mutation	Ficsor and Lo Piccolo 1972	sodium arsenate	E. coli	No reversions induced
	Moore 1976	arsenic trioxide	S. typhimurium	Negative Ames' test (without metabolic activation)
	Nishioka 1975	sodium arsenite	E. coli	Positive mutagen (induced tryptophan reversions).
	Casto (Letter 1977a)	sodium arsenite	hamster lung cells	Positive mutagen - increased the frequency of mutation in 8-azaguanine treated cells.
2. Chromosomal Effects In vitro Cytogenetics	Oppenheim and Fishbein 1965	potassium arsenite	human peripheral leukocytes	Chromosome gaps, breaks, translocations, dicentrics, ring forms were found. Cell division was supressed and there was an increased number of broken metaphase plates.
	Paton and Allison 1972	sodium arsenite	human diploid fibroblasts	Chromatid breakage
		sodium arsenite sodium arsenate	human diploid fibroblasts and leukocytes	Chromatid breakage > Effect higher with sodium arsenite Chromatid breakage > Effect higher with sodium arsenite
In vivo Cytogenetics	Petres et al. 1970, 1977	unspecified	human lymphocytes (from psoriasis patients and wine-growers)	Aneuploidy, chromatid breaks, acentric fragments, and dicentric chromosomes occurred more frequently in cells from persons exposed to arsenic than in the controls.
Dominant Lethal Effects	Sram and Bencko 1974	sodium arsenite	ICR-SP mice	An acute oral dose (250 mg/kg) given to the male produced negative results. Chronic application over 4 generations of males at 10 mg/liter of drinking water gave positive results (increase in overall dominant and preimplantation lethality). A subtoxic dose (100 mg/liter) gave no change in frequency of dominant lethality or male fertility.
3. DNA Damage	Burgdorf et al. 1977	potassium arsenite	human lymphocytes	There was a higher rate of sister chromatid exchange in lymphocytes from patients who had used Fowler's solution compared to lymphocytes from unexposed controls.
4. DNA Repair (microbial)	Rossman et al. 1975, 1977	sodium arsenite	E. coli (uv-exposed)	There was decreased mutation frequency of irradiated cells that were excision-repair deficient. There was decreased survival rate of uv-exposed cells (wild type, excision-repair deficient). No effect was found on strain deficient in post - replication repair.
	Nishioka 1975	sodium arsenate sodium arsenite	Bacillus subtilis	Both chemicals were positive mutagens. The effect was stronger with sodium arsenite.
(mammalian)	Jung et al. 1969	sodium arsenate	human epidermal cells (exposed to xenon lamp)	DNA dark repair activity decreased in presence of sodium arsenate.
	Jung and Trachsel 1970	sodium arsenate	human epidermal cells (exposed to xenon lamp)	DNA synthesis (reduced mitotic index) and DNA dark repair were both inhibited in presence of sodium arsenate.
5. Metabolic and Cellular Toxicity Effects (in vivo)	Skipper et al. 1951	potassium arsenite	mice	There was reduced incorporation of ^{14}C-formate (precursor of mouse DNA-purines) into nucleic acid purines.
	Sawada and Rabhun 1969	sodium arsenite	annelid worm eggs	There was inhibition of the formation of the mitotic apparatus (before fertilization).
(in vitro)	Tsuda 1974	sodium arsenate	mouse fibroblasts	The indices for prophase, metaphase, and mitosis increased, but decreased for telophase.
	Petres and Hundeiker 1968	sodium arsenate	human peripheral lymphocytes	The number of mitoses was reduced to 1/5 the expected number. Chromosome pulverization occurred consistently.
	Petres and Berger 1972	sodium arsenate	same	At high concentrations, the mitotic index decreased. There were metaphase plate pulverizations at low doses. There was inhibition of ^{3}H-thymidine incorporation into DNA.
	Petres et al. 1974	sodium arsenate	same	There was inhibition of ^{3}H-thymidine and ^{14}C-thymidine incorporation into DNA at lower doses than inhibition of ^{3}H-uridine and ^{14}C-uridine into RNA.
	Petres et al. 1975	sodium arsenate	same	After one hour of exposure, there was increasing inhibition of ^{14}C-thymidine incorporation into DNA.
	Baron et al. 1975	sodium arsenate	same	There was inhibition of ^{14}C-TTP into DNA and ^{14}C-UTP RNA. There was also inhibition of incorporation of labeled alanine and leucine into cellular proteins.

arsenic and then placed in plain medium. The cells were later fixed and stained and surviving colonies were counted.

The frequency of mutation was expressed as the number of 8-azaguanine resistant colonies per 10^6 surviving cells. The spontaneous mutation frequency of this cell line was less than 1 mutant per 10^6 surviving cells. Without sodium arsenite, there were 0.45 8-azaguanine resistant colonies per $5x10^5$ cells (mutation frequency of 0.9 colonies per 10^6 surviving cells). At 5 ug/ml of sodium arsenite, there were 9.6 resistant colonies per $5x10^5$ cells (mutation frequency of 65.0 mutant colonies per 10^6 surviving cells).

Ficsor and Lo Piccolo (1972) tested an ant poison, containing 3% sodium arsenate, for mutagenicity by bacteria-plate assay. The compound (dosage not given) was tested for its ability to revert two E. coli lac⁻ amber mutants (NG 422, YA 482) to the lactose-fermenting phenotype, and to revert a cys⁻ (cysB12) and two leu⁻ (AP517, 5bU504) auxotrophs to prototrophy. All five strains had a low frequency of spontaneous reversions, and each was reversible by the positive control (known mutagen) N-methyl-N'-nitro-N-nitrosoguanidine. The results were negative.

a rebuttable presumption against registration exists for all inorganic arsenical pesticides based on the mutagenic effects criterion. The various forms of inorganic arsenic are enumerated in Section I.A.

(a) Studies Relevant to Rebuttable Presumption

(i) Point Mutation Studies

Nishioka (1975) examined the mutagenic effect of sodium arsenite on strains of E. coli by reversion studies. The E. coli strains used were WP_2 (trp⁻, uvrA⁺, recA⁻); WP_2 uvrA (trp⁻, uvrA⁻, recA⁺); and CM_{571} (trp⁻, uvrA⁺, recA⁻). These strains were exposed to sodium arsenite concentrations ranging from 1.6×10^{-4} to 8.0×10^{-4} M. Reversions were induced in all but the CM_{571} strain of E. coli.

Casto (Letter 1977a) demonstrated that sodium arsenite was a point mutagen. Chinese hamster lung diploid cells (Cricetulus griseus, DON line) were grown in THAG medium. Sodium arsenite was added to the culture for 18 hours and then removed by adding fresh plain medium. After a 48-hour expression time, 10 ug/ml of 8-azaguanine was added. The culture medium was replaced with fresh medium containing 8-azaguanine every 48 hours for 20 to 25 days of incubation. For mutation assays the cells were fixed and stained. The cells for survival assays were grown in medium with the

Moore (1976) used the Ames' test, without metabolic activation, to test the mutagenicity of arsenic trioxide on 5 (or 4) strains of S. typhimurium. Positive controls (4-nitroquinoline-N-oxide and N-methyl-N'-nitrosoquanidine) were used. The results were negative for arsenic trioxide.

(ii) Bacterial DNA Repair

Nishioka (1975) examined the mutagenic effect of sodium arsenate and sodium arsenite on strains of Bacillus subtilis by rec-assay. For the assay, a 0.05 ml aliquot of either arsenic compound (at a concentration of 0.05 M) was dropped on filter paper which was placed on plates containing B. subtilis strains H_{17} (rec^+, arg^-, trp^-) or M_{45} (rec^-, arg^-, trp^-). Sodium arsenate was a positive mutagen, but its effect was less distinct than the effect with sodium arsenite.

(iii) Chromosomal Aberration Studies

1. In Vitro Cytogenetics

Oppenheim and Fishbein (1965) cultured human peripheral leukocytes stimulated with phytohemagglutinin (stimulates mitotic activity) for 72 hours in 0.5, 1.0, 3.3, and 10.0 uM potassium arsenite solutions (arsenic trioxide in dilute potassium bicarbonate). An additional culture was treated for 48 hours in a solution of 1.0 uM concentration. At a

concentration of 1 uM, potassium arsenite induced chromosomal damage, such as chromosome gaps and breaks, translocations, dicentrics, and ring forms. Potassium arsenite also supressed cell division, increased the number of broken metaphase plates, and increased cell damage at the higher concentrations. These effects increased from the 48-hour to the 72-hour treatment, with the exception of cell division which was suppressed more at 48 hours.

Paton and Allison (1972) investigated the effects of subtoxic doses of sodium arsenite and sodium arsenate on cultured human diploid fibroblasts and leukocytes. In chromosomal studies, leucocyte cultures were treated for 48 hours with 2.9×10^{-9} to 1.8×10^{-8} M solutions of sodium arsenite or 5.8×10^{-9} M sodium arsenate. Of the metaphase plates examined, 60% (sodium arsenite) and 5% (sodium arsenate) of the cells had chromatid breakage. In fibroblast cultures treated for the last 24 hours of culture with 2.9×10^{-9} to 5.8×10^{-8} M sodium arsenite, 20% of the metaphase plates showed chromatid breakage. These values were significantly higher ($p = 0.01$) than the control values for leukocytes (2%) and for fibroblasts (3%).

To study long-term effects, cultured fibroblasts and leukocytes were treated for several weeks with subtoxic doses of these arsenic salts. The cells were often over-contracted but otherwise did not differ from the

control cells. In short-term exposure (24 to 48 hours) of fibroblast and leukocyte cultures to sodium arsenite and sodium arsenate, there was significantly more chromatid breakage than in the control cultures. The breaks were often located close to the end of a chromosome. The incidence of chromatid exchange was higher in leukocytes than in fibroblasts.

2. In Vivo Cytogenetics

Petres et al. (1970; 1977) did chromosomal analyses of lymphocytes from a group of patients previously exposed to arsenic and from a control group with no previous exposure to arsenic. Since the 1977 study appears to include many of the same persons in the first study, only the latter paper will be discussed. The control group consisted of 14 psoriasis patients and 17 healthy patients, both without a history of exposure to arsenic. The test group included 14 psoriasis patients medically treated with arsenic and 17 vineyard workers who had used arsenical pesticides. In some cases the last exposure to arsenic occurred more than 30 years previously. The control group averaged 14 years younger than the exposed patients. The male/female sex ratio was near unity in the control group but was approximately 6/1 for the exposed group. All patients who had been exposed to arsenic had palmar and plantar hyperkeratosis and some history of cutaneous carcinomas.

Several observations were made on cultured lymphocytes:

1. Chromatid breaks, acentric fragments, and dicentric chromosomes occurred more frequently in cells from persons exposed to arsenic (76/1121=0.07) than in control cells (3/1247=0.002) ($p<0.001$). Two dicentric chromosome-containing cells were found in treated persons; none were noted in controls. No information was given as to the distribution of the aberrant cells among the subjects;

2. Aneuploidy occurred significantly more frequently in cells from treated subjects than in cells from controls (26.7 and 7.1% of the treated and control cells, respectively). It is not known if the aberrant cells were distributed randomly among subjects. The high frequency of aneuploid cells in exposed persons is difficult to interpret, because essentially all aberrant cells were hypodiploid; cells with hyperdiploid chromosome numbers were not found; and

3. The incorporation of radioactively-labeled thymidine and uridine into DNA and RNA decreased in a dose-response fashion in cultures of lymphocytes, from control persons, treated with exogenous sodium arsenate (0.05 to 100 ug/ml). The effect of arsenate on nucleotide transport into cells and on thymidine/uridine phosphorylation to nucleotides for incorporation into nucleic acids was not assessed.

3. Dominant Lethal Effects

Using sodium arsenite, Sram and Bencko (1974) performed a dominant lethal test with ICR-SPF mice using both acute and chronic multi-generation dosing regimens, and tested for synergistic effects with TEPA, a positive control mutagen. To determine if sodium arsenite can induce dominant lethal mutations, a toxic dose of 250 mg/kg was applied perorally (acute test). The results were negative.

In a second study of chronic application over four generations, weaned male mice were given either 10 or 100 mg of arsenic per liter of drinking water ad libitum over an 8-week period. Based on consumption of water, the actual intake of arsenic was 1.6 mg/kg per day (10 mg/liter)

and 9 to 10 mg/kg per day (100 mg/liter). During each of the eight weeks, several male mice (P_1) were mated, and the next three generations came from these matings. In males given 10 mg/liter, the overall dominant lethality and preimplantation lethality increased in the second and third weeks of mating. In other weeks there was no difference from the controls. The males exposed to 100 mg/liter (subtoxic) showed no change in the frequency of dominant lethal mutations or male fertility.

A third study of synergistic effects with TEPA (reference chemical mutagen) was done. A single intraperitoneal dose of 1 mg of TEPA per kg was given to males of the F_3 generation that were given either 10 or 100 mg/liter of sodium arsenite. For treatment with TEPA and 10 mg/liter of arsenic, there was no increase in the number of mutagenic effects over that seen with 1 mg of TEPA. At 100 mg/liter of sodium arsenite and TEPA, there was an increase in the overall dominant and preimplantation lethality which increased significantly in the second week.

(iv) DNA Damage

Burgdorf et al. (1977) found an elevated sister chromatid exchange rate (SCE) in lymphocytes from six patients who had used Fowler's solution (containing potassium arsenite) compared to lymphocytes from 44 unexposed controls. The lymphocytes were cultured in total darkness with phytohemagglutinin, penicillin-streptomycin, and bromodeoxy uridine and treated with colchicine for three hours. The cells were fixed and stained for SCE. Centromeric exchanges were differentially included in the total SCE counts.

The arsenic-exposed patients had a mean of 14.00 SCE/mitosis with a range of 4 to 30 (standard deviation, 3.12). The controls had a mean of 5.8 SCE/mitosis with a range of 1 to 23 (standard deviation, 2.27). There was no difference in chromosomal breakage between the two groups.

(v) DNA Repair Studies

Rossman et al. (1975) irradiated strains of E. coli, differing only in repair markers, with UV light and exposed the cells to various concentrations of sodium arsenite. Culture samples were irradiated in petri dishes with a 15 W germicidal lamp at a distance of 50 cm. After exposure, serial dilutions were made and plated onto nutrient agar containing the following concentrations of sodium arsenite: 10^{-5}, 10^{-4}, 10^{-3}, and 10^{-2} M.

The wild type (WP2) and excision-repair deficient strains WP6 and WWP2 (polA$^-$ and uvrA$^-$, respectively) showed decreased survival in the presence of 0.1 mM of sodium arsenite. The magnitude of the effect increased with increasing UV doses. There was no apparent effect on survival of the unirradiated cultures of WP2, but there was a loss of colony-forming ability at a concentration of 5 mM. Sodium arsenite had no effect on the survival of WP10 cells (recA$^-$, deficient in post-replication repair) at any dose. The survival of WP5 cells (lex$^-$) was increased significantly (statistical significance not given) by sodium arsenite, and the effect decreased with increasing UV doses. The authors postulated that arsenite inhibits a recA$^-$ dependent step in DNA repair. For increased survival of the lex$^-$ mutant, WP5, it is suggested that in the absence of the lex$^+$ gene, the arsenite-sensitive recA-dependent function is deleterious.

Rossman et al. (1977), based on the findings in their first paper, attempt to support their hypothesis that arsenicals inhibit some aspect of DNA repair, specifically that sodium arsenite affects post-replication repair.

Strains of E. coli differing only in repair markers were irradiated with UV light and then plated onto medium containing 0.1 mM sodium arsenite. The strains used were:

WP2 (wild type for repair); WP6 and WWP2, both excision-repair deficient; WP10, deficient in post-replication repair; and WP5. Compared to control cultures, sodium arsenite decreased the survival rate of UV-exposed cells of strains WP2, WWP2, and WP6. There was no effect on survival of strain WP10, and survival increased in strain WP5. Sodium arsenite also had no effect on cultures that were not irradiated.

The excision-repair deficient strain WWP2 is more subject to mutation than the wild type WP2. The mutation frequency for this strain was measured after exposure to UV light, by scoring for trp^+ revertants. Cultures were exposed to UV light and plated with 1 mM sodium arsenite. Controls at each UV dose level were plated onto plain nutrient agar. Sodium arsenite decreased the absolute mutation frequency and the number of mutations per survivor at all UV exposures. At higher UV levels, survival of the cells dropped below 1%.

Based on their data, the authors speculated that sodium arsenite inhibits post-replication repair of DNA by inhibiting a recA-dependent function such as SOS repair. This DNA repair pathway is inducible in damaged cells (i.e., by UV exposure), repressed in undamaged cells, and is error-prone. After UV exposure, sodium arsenite decreased mutagenesis in strains WP2, WWP2, and WP6 containing the $recA^+$ and lex^+ genes (upon which mutagenesis depends).

The effect of sodium arsenite (inhibition of post-replication repair) on the survival of UV-irradiated strains of E. coli increased with increasing irradiation. The authors believe this supports their hypothesis that post-replication repair is inhibited by sodium arsenite. This becomes more important at higher UV doses due to saturation of the excision repair capacity.

When Jung et al. (1969) exposed human epidermal cells to sodium arsenate, there was a temporary reduction in enzymatic dark repair activity of DNA. Dark repair is the non-light dependent cell repair mechanism consisting of several enzymatic steps by which single-strand DNA lesions can be recognized, excised, and repaired.

Skin grafts from human male subjects were incubated for either one or four hours in medium containing either 10^{-5} or 10^{-6} M sodium arsenate. The cultures were then irradiated with an unfiltered xenon lamp and incubated with ^{3}H-methyl thymidine for four hours. In the stratum basale, stratum spinosum, and stratum granulosum, the thymidine labeling was visible in many nuclei as "light marking", which is regarded as repair marking and is dependent on the intensity of irradiation. A statistical evaluation showed that repair activity fell significantly ($p<0.05$) as a

result of incubation with sodium arsenate. There was no statistically confirmed difference between the incubation periods of one and four hours or between arsenic concentrations of 10^{-5} and 10^{-6} M.

Jung and Trachsel (1970) showed that sodium arsenate inhibited DNA synthesis and DNA dark repair in human epidermal cells. The cells were cultured in medium containing 10^{-5} or 10^{-6} M sodium arsenate for one or four hours. The cultures were then radiated with an unfiltered xenon lamp. Radio-labeled thymidine was added to the cells which were then incubated for four hours. The cells were fixed, stained, and autoradiographed. The number of premitotic "marked" cells per 1,000 cells was calculated and used as the mitotic index.

Cells from various stages of the incubation process were examined: control cells, cells irradiated only, cells incubated with sodium arsenate (1 hour), and cells irradiated and cultured with sodium arsenate. Radiation and arsenic alone reduced the mitotic index, but this effect was significantly greater with simultaneous exposure ($\alpha = 0.01$).

To measure the effectiveness of the dark repair system, the number of silver grains per cell surface was measured for 200 epidermal cells (measure of thymidine incorporation into DNA). There was a statistically significant ($\alpha = 0.05$) reduction in dark repair due to

sodium arsenate. There was no difference between a 1- or 4-hour incubation time or between 10^{-5} and 10^{-6} M concentrations of arsenate.

The Agency concludes that there is multi-test evidence for the mutagenicity of inorganic arsenates and arsenites. Based on Nishioka (1975), there is evidence that both arsenate and arsenite compounds are positive point mutagens. In studies by Jung et al. (1969) and Rossman et al. (1977), inorganic arsenate and arsenite inhibited DNA repair mechanisms. Both in vitro and in vivo studies show that arsenite and arsenate induced chromosomal aberrations in various cultured human cells and in lymphocytes taken from psoriasis patients and vintners.

The Agency concludes, therefore, that sufficient data exist on the mutagenicity of both trivalent inorganic arsenic (arsenite) and pentavalent inorganic arsenic (arsenate). Section I.J presents strong evidence of the ability of inorganic arsenic to interconvert in vivo (arsenite to arsenate, and arsenate to arsenite). As discussed in Section III.A, this interconversion makes trivalent arsenic a metabolite of pentavalent arsenic, and pentavalent arsenic a metabolite of trivalent arsenic.

Therefore, in the case of pentavalent inorganic arsenic, the Agency stresses that the RPAR is being issued for two reasons: 1) that pentavalent arsenic is a mutagen

and 2) that pentavalent arsenic is reduced *in vivo* to trivalent arsenic, which also acts as a mutagen. The EPA concludes that either characteristic is a sufficient criterion for the issuance of an RPAR.

The basis for issuance of an RPAR for trivalent inorganic arsenic is similar: 1) that trivalent arsenic is a mutagen and 2) that trivalent arsenic is oxidized *in vivo* to pentavalent arsenic, which also acts as a mutagen.

(b) Studies on Which Further Information is Sought: Metabolic and Cellular Toxicity Effects

This section addresses effects of inorganic arsenicals on genetic material and processes that are probably due to metabolic and cellular toxicity, but for which insufficient evidence exists to initiate a rebuttable presumption. The Agency requests registrants or other interested persons, having information on these effects, to submit such data to the Agency. The following studies indicate that inorganic arsenicals affect the mitotic process and induce chromosomal pulverization as well as inhibition of the incorporation of important precursors into DNA and RNA.

Skipper et al. (1951) injected CFW strain mice intraperitoneally with an 18.0 mg/kg dose of potassium arsenite. This was immediately followed by an injection of ^{14}C-sodium formate. The control mice received only the injection

of labeled sodium formate. After six hours, all groups of mice were sacrificed. Potassium arsenite markedly reduced the incorporation of ^{14}C-formate into nucleic acid purines. In the rat, formate carbon is a required precursor of the bases in deoxyribonucleic acid (guanine, adenine, and thymidine) and of ribonucleic acid (guanine and adenine).

Sawada and Rebhun (1969) studied the effects of sodium arsenite on eggs of the annelid worm Pectinaria gouldi which develop the first mitotic apparatus (MA) after they are shed into sea water. The MA will remain at metaphase for several hours until the egg is fertilized. Prior to the formation of the MA, eggs were immersed in solutions of sodium arsenite in sea water (concentration not specified). This completely inhibited the formation of the MA in annelid worm eggs. If development of the MA was allowed to occur, the minimum concentration for its dispersion was 5×10^{-3} M This dispersion was irreversible.

Petres and Hundeiker (1968) cultured phytohemagglutinin-stimulated human lymphocytes of peripheral blood from nonarsenic-exposed donors for 72 hours. At either 24 or 48 hours before terminating the cultures, sodium arsenate was added at the concentrations of 10^{-6} and 5×10^{-6} g/ml of culture media. Control cultures were prepared without sodium arsenate. Compared to the controls, the

number of mitoses in the cells treated with sodium arsenate was reduced to approximately one fifth (1/5) the expected number. Chromosome pulverization occurred consistently in cultures incubated for 24 or 48 hours with sodium arsenate.

Petres and Berger (1972) studied the potential cytotoxic and mutagenic effects of sodium arsenate tested *in vitro* on cultured human lymphocyte cells of peripheral venous blood from non-arsenic-exposed donors. The cells were cultured for 72 hours in a medium containing phytohemagglutinin. Forty-eight hours before termination of the cultures, sodium arsenate was added at the following concentrations: 3×10^{-5}, 1×10^{-5}, 5×10^{-6}, 2×10^{-6}, 1×10^{-6}, 5×10^{-7}, 1×10^{-7}, and 5×10^{-8} g/ml of culture medium. Control cultures were grown without sodium arsenate. ^{3}H-thymidine was also added to both test and control cultures. The mitotic index decreased considerably only with the higher sodium arsenate solutions. Serious nuclear division disorders and metaphase plate pulverization occurred at low doses. At the concentrations of 1×10^{-7} and 2×10^{-6} g/ml, there were 36.3% and 80 to 100% pulverizations, respectively. The ^{3}H-thymidine labeling index was significantly reduced at the mid-level doses compared to the control values. This reduction in the index indicates inhibition of ^{3}H-thymidine incorporation into DNA.

Petres et al. (1974) added sodium arsenate to cultures of phytohemagglutinin-stimulated human lymphocytes of peripheral venous blood from non-arsenic-exposed donors. The incorporation of radioactively labeled thymidine and uridine into DNA and RNA was measured by scintillation counting and autoradiography. Sodium arsenate was added 24 hours before termination of the 72-hour incubation period at the following concentrations (ug per ml of medium): 0.05, 0.1, 0.5 (thymidine only), 1.0, 2.0 (thymidine only), 5.0, 10.0, 30.0, 50.0, and 100.0. Control cultures were simultaneously prepared without sodium arsenate. Six hours before termination of the cultures, either H-^{3}thymidine or H-^{3} uridine was added to one set of the cultures.

For scintillation counting, cultures were prepared with sodium arsenate concentrations of 0.05, 0.1, 10.0, 30.0, 50.0, and 100.0 ug of sodium arsenate per ml of culture medium. Controls without sodium arsenate were also prepared. Eighteen hours before termination of the 72-hour culture period, either ^{14}C-thymidine or ^{14}C-uridine was added to a culture.

The marker index obtained using autoradiography indicated that inhibition of ^{3}H-thymidine incorporation into DNA began at low concentrations of sodium arsenate (i.e., 0.1 ug/ml). This inhibition increased with increasing

Table 24. Summary of Studies on Inorganic Arsenic Teratogenicity in Animals.

Authors	Chemical(s)	Test Animal	Treatment: Dosage Level, Duration, and Route	Dosage (mg/kg)	Effects
Fronko et al. 1936	Sodium arsenite	chicken embryo	not specified	0.01 - 1.0 ppm single dose(1)	There were only ectopic abnormalities (unspecified) and these occurred at the lowest dosage. There were no abnormalities at 1.0 ppm.

concentrations, and at 100 ug/ml there was 97% inhibition compared to controls. Inhibition of ^{3}H-uridine incorporation into DNA began at concentrations of sodium arsenate greater than 10 ug/ml. At 100 ug/ml there was 50% inhibition compared to controls.

Using scintillation counting, inhibition of ^{14}C-thymidine incorporation into DNA was detected at 1.0 ug/ml and increased with higher concentrations. Inhibition of ^{14}C-uridine incorporation into RNA was detected at concentrations greater than 10.0 ug/ml.

Petres et al. (1975) cultured phytohemagglutinin-stimulated human lymphoctes of peripheral blood from non-arsenic-exposed donors for 72 hours. From 1 to 18 hours before termination of the cultures, either 10, 30, or 50 ug of sodium arsenate was added per ml of culture medium. Parallel control cultures were prepared without sodium arsenate. Later ^{14}C-thymidine was added to each culture. In human lymphocyte cultures exposed to various levels of sodium arsenate for one hour, there was a 17% increase in the incorporation of ^{14}C-thymidine into DNA. As the exposure time increased, there was a general decrease in the incorporation rate. After 18 hours of incubation with 10 ug of sodium arsenate, the incorporation rate was inhibited up to 35%. At the higher concentrations, there was 65 to 70% inhibition.

Baron et al. (1975) exposed phytohemagglutinin-stimulated human lymphoctes to various concentrations of sodium arsenate, ranging from 0.05 to 100 ug/ml of culture medium, for 24 hours. Radioactively labeled triphosphates and amino acids were also added to the cultures. The incorporation of ^{14}C-thymidine into DNA was inhibited at a lower dose than the incorporation of ^{14}C-uridine into RNA. This confirmed the previous study by Petres et al. (1974). The incorporation of ^{14}C-TTP into DNA was inhibited to the same extent as ^{14}C-thymidine. ^{14}C-UTP incorporation into RNA was similar to that of ^{14}C-uridine only at levels below 1.0 ug of sodium arsenate per ml of culture medium. At higher doses, the incorporation of ^{14}C-UTP was inhibited less than that of ^{14}C-uridine.

The inhibition of incorporation of ^{14}C-ATP with increasing sodium arsenate doses was parallel to the incorporation of ^{14}C-UTP and ^{14}C-TTP up to a concentration of 10 ug/ml. Above this concentration, the incorporation of labeled ^{14}ATP into nucleic acids was greater than ^{14}C-TTP and less than ^{14}C-UTP.

A decrease in the incorporation of ^{14}C-alanine and ^{14}C-leucine into cellular protein was not found below a sodium arsenate concentration of 10 ug/ml. Even at the higher doses, there was less inhibition of incorporation than that of the labeled triphosphates and nucleosides.

Fronko et al. 1936	Sodium arsenite	chicken embryo	injection not specified	0.01 - 1.0 ppm single dose(1)	There were only ectopic abnormalities (unspecified) and these occurred at the lowest dosage. There were no abnormalities at 1.0 ppm.

Tsuda (1974) exposed L strain mouse fibroblast cells to three concentrations of sodium arsenate (0.5×10^{-4} M, 10^{-4} M, and 0.33×10^{-3} M) from 1 to 48 hours. The effects on each phase of mitosis were determined by changes in the mitotic index (# mitoses per 100 cells). As the concentration of sodium arsenate increased, the indices for prophase, metaphase, and mitosis increased compared to the control values. The telophase index decreased, while the index for anaphase remained in the control range of values. Complete recovery of cells exposed to sodium arsenate for one hour appeared to be delayed for approximately six hours. There was also no apparent increase in the mitotic index over the control index.

(3) Reproductive and Fetotoxic Effects in Mammalian and Avian Species

40 CFR 162.11(a)(3)(ii)(B) provides that a rebuttable presumption shall arise if a pesticide "(p)roduces any other chronic or delayed toxic effect in test animals at any dosage up to a level, as determined by the Administrator, which is substantially higher than that to which humans can reasonably be anticipated to be exposed, taking into account ample margins of safety." This section reflects concern that chronic exposure to chemicals may result, among other things, in injury to the reproductive system and/or the fetus and provides that a rebuttable presumption shall arise if chronic chemical exposure in test animals produces such results.

Studies discussed in this report (and summarized in Table 24) show that both trivalent (arsenite) and pentavalent (arsenate) forms of inorganic arsenic can act as teratogenic agents. The Agency concludes that, without exception, a rebuttable presumption against registration exists for all inorganic arsenical pesticides based on the teratogenic effects criteria. This decision takes into account anticipated exposure to inorganic arsenical pesticides as discussed in Section III.

Beaudoin (1974) gave single intraperitoneal injections of sodium arsenate in distilled water to pregnant Wistar rats on one of days 7 through 12 of gestation. The dosage level of sodium arsenate ranged from 20 to 50 mg/kg of body weight. The embryolethal and teratogenic effects of sodium arsenate were dose-dependent and peaked on days 9 and 10 of treatment. Resorption of fetuses was day- and dose-dependent. The percentage of resorbed fetuses was the highest at 40 mg/kg and peaked for treatment on day 9. Fetal weights for days 8, 9, and 11 of treatment were significantly less ($p < 0.01$) than the controls.

The frequency of malformed fetuses markedly increased when the dosage went from 20 to 30 mg/kg. Little additional fetal malformations occurred with 40 mg/kg. The greatest degree of fetal abnormality occurred on day 9 of gestation. A dose of 50 mg/kg of sodium arsenate was lethal to embryos for all days (7 through 12) of treatment. Teratogenic effects were not observed in fetuses treated with 20 or 30

Table 24. Summary of Studies on Inorganic Arsenic Teratogenicity in Animals.

Authors	Chemical(s)	Test Animal	Treatment: Gestation Day(s) Treated / Day(s) Sacrificed		Dosage (mg/kg)	Effects
Beaudoin 1974	Sodium arsenate	Wistar rat	ip	7 - 12 / 20	20 - 50 single dose	Fetal resorption and malformation were dose-dependent and peaked on treatment days 9 and 10. 50 mg/kg was lethal to all embryos. There were no teratogenic effects on days 7 and 11 and few on day 12. Malformations: eye defects, exencephaly, renal agenesis, rib and vertebral defects.
Burk and Beaudoin 1977	Sodium arsenate	Wistar rat	ip	9 - 11 / 20	30 - 50 single dose	Fetal resorption and malformation were greatest on day 9. Renal agenesis occurred mainly from treatment on day 10. Skeletal defects occurred mainly from treatment on days 9 and 10. Fetal weights declined significantly with treatment. Malformations: exencephaly, eye defects, facial clefts, agnathie, hydrocephalua, encephalomeningocele, diaphragmatic hernia.
			ip	10 / 11 - 16	45 single dose	Renal agenesis resulted mainly from growth retardation of the masonephric duct.
Ferm and Carpenter 1968	Sodium arsenate	golden hamster	iv	8 / 12 - 14	5,20,40 single dose	No malformations at 5 mg/kg. All fetuses killed in utero at 40 mg/kg. At 20 mg/kg, there were exencephalic lesions, bulging eyes, and protruding tongue and mandibles.
Holmberg and Ferm 1969	Sodium arsenate	golden hamster	iv	8 / 13	20 single dose	There was fetal resorption and malformation: exencephaly, encephalocele, cleft palate and lip, anophthalmia, ear malformations.
Ferm et al. 1971	Sodium arsenate	golden hamster	iv	8 / 15	15,17.5, 20,25 single dose	Embryo resorption and malformation were dose-dependent. Malformations: exencephaly, rib defects, genitourinary defects, anencephaly, cleft lip and palate, anophthalmia, adrenal agenesis, prognathia. Genital abnormalities were greatest in females, and cleft lip, palate, and rib abnormalities were seen primarily in males.
Hood 1972	Sodium arsenite	albino Swiss-Webster mouse (CD-1 strain)	ip (in utero)	7 - 12 / 18	10,12 single dose	There was a high degree of resorption and reduced fetal weights that were day and dose-dependent. Malformations were highest on days 8 to 10: exencephaly, micrognathia, open eye, defective tail, skeletal defects.
Hood and Bishop 1972	Sodium arsenate	albino Swiss-Webster mouse (CD-1 strain)	ip	6 - 12 / 18	25,45 single dose	At 25 mg/kg, there was no significant difference from the controls. At 45 mg/kg, there was increased resorption, especially from days 11 and 12. Fetal weights were reduced especially from days 7 and 9. Fetal malformations were highest on days 7 to 11: exencephaly, shortened jaw, protruding tongue, anophthalmia exophthalmos, open eye, umbilical hernia, tail defects, hydrocephalus, and skeletal defects.
Hood and Pike 1977	Sodium arsenate	albino Swiss-Webster mouse (CD-1 strain)	ip	9 / 18	40 single dose	There was a significant increase in fetal mortality, resorptions, and malformations. There was a decrease in fetal weights due to treatment.
Hood et al. 1977	Sodium arsenate	albino Swiss-Webster mouse (CD-1 strain)	ip	9 - 10 / 18	40	There was less effect on fetal mortality, weight, and malformation in orally treated mice than in those injected.
			oral (p.o.)		120 single dose	
Hood et al. (undated)	Sodium arsenate	albino Swiss-Webster mouse (CD-1 strain)	ip	7 - 15 / 18	40 single dose	There was a significant decrease of fetal weights from treatment on days 7 or 10. There was a significant increase in fetal resportion and death. (Prenatal mortality was higher than in the orally treated mice.) Treatment on days 9 or 10 resulted in increased malformations such as exencephaly, shortened jaw, open eyes, kinked tail, and skeletal defects.
			oral (p.o.)	7 - 15 / 18	120 single dose	There was a significant reduction of fetal weights from treatment on days 10, 11, or 15. The number of dead or resorbed fetuses increased significantly from day 11 treatment. Oral treatment did not increase significantly the incidence of gross malformation, but a trend was evident. Malformations: oligodactyly, micromelia, kinked tail. Skeletal defects increased significantly only from treatment on day 9 (same as with ip treatment).
Matsumoto et al. 1974	Sodium arsenite	mouse (ICR strain)	oral (p.o.)	9 - 11 / 18	10, 20 40 daily dose	There were 5.7% (10 mg/kg), 0% (20 mg/kg), and 4.2% (40 mg/kg) fetal malformations compared to 0% for controls (no statistical values given). Malformations were bent tail, cleft palate, open eyelid, and bone deformities (40 mg/kg). There was reduced fetal growth and ossification of cervical vertebrae and leg/tail bones.
			ip	6 - 11 / 18	5,10, 20 daily dose	There were 3.5% (5 mg/kg) and 1.3% (10 mg/kg) fetal malformations compared to 1.2% for controls (no statistical values given). Malformations were open eyelid, bent tail, club foot, and kidney deformity (10 mg/kg). As in oral treatment there was reduced growth and ossification.

Frenke et al. 1936	Sodium arsenite	chicken embryo	injection	not specified	0.01 - 1.0 ppm single dose(1)	There were only ectopic abnormalities (unspecified) and these occurred at the lowest dosage. There were no abnormalities at 1.0 ppm.
Ridgway and Karnofsky 1952	Potassium arsenite, Arsenic pentoxide, Sodium arsenate	Leghorn chicken embryos	injection	4, 8 18	0.2 mg/egg single dose(2)	Embryos injected on the fourth day with sodium arsenate were stunted with mild micromelia and abdominal edema. There were no effects with potassium arsenite and arsenic pentoxide. There were no effects in the eight-day old embryos.
Puzanove and Daskocil 1976	Pentavelent arsenic	Leghorn chicken embryos	injection	2 - 4 varied	3ug/egg single dose(3)	Embryos treated day 2 of incubation were normally differentiated. Of embryos (19) surviving day 3 treatment, 21% had abnormalities (deformed beak, lumbar lordosis, body distortion, wrinkled brain vesicles, incomplete body walls). Thirteen (13) embryos survived day 4 treatment; 32.5% had abnormalities such as impaired mesonephros, kyphosis of body, hyperlordosis and small amnion. Compression of embryos in deformed amnion may have caused defects.
Schroeder and Mitchner 1971	Soluble arsenite salt	Charles River mouse	oral (drinking water)	through 3 generations	5 ppm ad libitum(4)	Arsenic increased the ratio of males to females and reduced the litter size.
Kimmel and Fowler (letter 1977b)	Sodium arsenate Sodium arsenite	rat	oral (drinking water)	1 - 21 21	30,90 ppm ad libitum(5)	No adverse effects.
James et al. 1966	Potassium arsenate	Yearling ewe	oral (capsule)	treated for 18, 45, 140 and 147 days	0.5 - 0.75	All lambs were normal. One lamb born to a ewe given 0.75 mg/kg (later reduced to 0.5 mg/kg due to toxicity) was very small.
Morris et al. 1938	Arsenic trioxide	Osborne - Mendel rat	oral (food)	treated from 4 wk. old to 1 yr.	27, 215 mg in diet(6)	There were no significant differences in fertility and fecundity between the experimental and control groups. This was also true of the F_1 generation when treated similarly.
Kojima 1974	Arsenic trioxide	Wistar rat	oral (food)	treated prior to and during gestation	10, 50, 100 ppm in diet(7)	No significant difference in the number of litters between treated and control rats.

1. Total As: 0.01 - 1.0 mg/kg (Franke et al. 1936).
2. Total As: 4 mg/kg (Romanoff and Romanoff 1949).
3. Total As: 0.06 mg/kg (Romanoff and Romanoff 1949).
4. Daily dose for adult females 0.56 - 2.0 mg/kg (Letter 1978).
5. Total As: 2.25-3.75 mg/kg; 6.75-11.25 mg/kg (Letter 1977b).
6. 9.2 mg/kg/day; 79 mg/kg/day (Morris et al. 1938).
7. Total As: 15.4 mg/kg; 77.1 mg/kg; 154.3 mg/kg (Kojima 1974).

mg/kg on days 7 and 11. On day 12 there were some skeletal defects. Fetal malformations included eye defects, exencephaly, renal agenesis, and rib and vertebral defects. Atlas ossification centers were absent or rudimentary in 63% of the fetuses from dams treated on day 9 of gestation.

Burk and Beaudoin (1977) found that there was a high incidence of malformations (including renal agenesis) and resorptions, both of which were dose-dependent and related to the time of treatment, in embryos from Wistar rats which had been injected intraperitoneally with sodium arsenate.

In a preliminary study, pregnant rats were given a single intraperitoneal injection of aqueous sodium arsenate (30 to 50 mg/kg of body weight) on one of days 9 through 11 of gestation. The rats were sacrificed on day 20. The number of fetal resorptions and malformed survivors (soft tissue and skeletal defects) increased with increasing concentrations of sodium arsenate for each day. The percentages of both were greatest on day 9 and decreased thereafter. Malformations that occurred primarily on day 9 of gestation were exencephaly, eye defects, and facial clefts. There were also cases of agnathia, hydrocephalus, gastroschisis, encephalomeningocele, and diaphragmatic hernia. Day-10 treatment resulted primarily in urogenital system defects. Skeletal malformations occurred primarily on days 9 and 10. Fetal weights declined as the concentration of sodium arsenate increased.

In the second experiment to study renal agenesis, the pregnant rats were injected with 45 mg/kg on day 10 of gestation. This was the most effective dose for production of renal agenesis, with minimal embryonic death. The rats were sacrificed on days 11 through 16. The first abnormal fetuses (from day-12 treatment) showed growth retardation of the mesonephric duct. For treatment days 13 through 16, retardation of the duct eventually prevented formation of the ureteric bud and resulted in renal agenesis. In some cases the mesonephric duct failed to connect with the cloaca, and there was degeneration of the metanephric blastema. Gonadal agenesis was not observed in any of the embryos from treated rats, but in some cases there was incomplete descent of the testes.

Ferm and Carpenter (1968) intravenously injected either 5, 20, or 40 mg/kg of sodium arsenate in distilled water into the lingual vein of pregnant golden hamsters (Cricetus auratus) on the eighth day of gestation. Control animals received only distilled water. The hamsters were sacrificed on days 12 through 14. All embryos died in utero at 40 mg/kg of sodium arsenate. Exencephalic lesions were induced at 20 mg/kg of body weight, and no malformations occurred with 5 mg/kg. The exencephalic lesions were markedly consistent and specific, and often within a litter a majority of the survivors showed strikingly similar defects. Other effects included bulging eyeballs and protruding tongue and mandibles. Histological examination of the placental membranes showed no abnormalities.

Holmberg and Ferm (1969) injected a sublethal dose (20 mg/kg) of sodium arsenate into the lingual vein of pregnant golden hamsters (Cricetus auratus) on the eighth day of gestation. After sacrifice on the thirteenth day, the embryos exhibited several types of malformations, and the most prominent of these in all litters was exencephaly. Other abnormalities included encephalocele, cleft palate and lip, unilateral and bilateral microanophthalmia, and ear malformations. Sodium arsenate induced a total of 49% malformed embryos and 35% resorbed embryos.

Ferm et al. (1971) injected sodium arsenate intravenously into pregnant golden hamsters (Cricetus auratus) at three different times on the eighth day of gestation. The three groups were treated with sodium arsenate at 9 AM, 3 PM, and 9 PM (6-hour intervals) at the following doses (mg/kg): 15, 17.5, 20, and 25 (9 PM only). Control hamsters were injected intravenously with similar volumes of demineralized water. The females were sacrificed on the morning of the 15th day of gestation.

Within each of the three periods of treatment, the rate of embryo resorption and malformation increased with increasing doses of sodium arsenate. A comparison of the three groups showed that the resorption rate decreased the later the time of treatment on the eighth day of gestation.

The rate of malformation did not follow a similar pattern except at 15 mg/kg sodium arsenate. Malformations were slightly more frequent in the 9 PM group at the higher doses. A marked increased in rib malformations accounted for this high malformation rate in the 9 PM period. The overall malformation rate remained constant for all three periods of treatment. Fetal malformations that occurred most frequently included exencephaly, rib malformations, genito-urinary abnormalities, and anencephaly. Other effects seen less frequently were cleft lip and palate, anophthalmia, adrenal agenesis, and prognathic embryos. Cleft lip and palate and rib abnormalities were significantly more frequent in males, and genital abnormalities occurred more frequently in female embryos. The sex ratio for the total malformation rate was close to 1.0.

Hood (1972) gave pregnant albino Swiss-Webster mice single intraperitoneal injections of either 10 or 12 mg of sodium arsenite in distilled water per kg of body weight on one of days 7 through 12 of gestation. Controls were injected with an equivalent volume of distilled water. All mice were sacrificed on the 18th day of gestation. Treatment of the pregnant mice with sodium arsenite resulted in a significant ($p < 0.05$) increase in fetal deaths for all

days 7 through 12 at both dosage levels studied. Most deaths apparently occurred shortly after treatment as determined by the degree of resorption. There was a significant ($p < 0.05$) decrease in fetal weights that was day- and dose-dependent. The higher doses tended to induce a greater effect. The period of greatest susceptibility to teratogenic effects was gestation days 8 through 10. On these days there was a significant ($p < 0.05$) difference from the control value. The most common malformations were exencephaly, micrognathia, open eye, and bent, short, or missing tails. The major skeletal defects were fusion of the ribs and fused or missing vertebral ossification centers. These malformations were found only in fetuses from the groups treated on days 8 through 10 (rib defects) and on days 9 to 10 (vertebral anomalies).

Hood and Bishop (1972) gave single intraperitoneal injections of 25 or 45 mg of sodium arsenate per kg of body weight to pregnant albino Swiss-Webster mice on one of days 6 to 12 of gestation. Controls received an equivalent dose of distilled water. The mice were sacrificed on the eighteenth day of gestation.

In females injected with 25 mg/kg of sodium arsenate, the rates of fetal resorption and malformation were not significantly different from those found in the controls.

Intraperitoneal injections of 45 mg/kg, particularly on treatment days 11 and 12, consistently resulted in significantly increased fetal resorption. Treatment on days 6 through 11 resulted in decreased fetal weights compared to controls ($p < 0.05$). Reduction in fetal weights was the most severe on treatment days 7 and 9. Sodium arsenate induced several fetal malformations that were somewhat day-dependent. Among these were exencephaly, shortened jaw, protruding tongue, anophthalmia, exophthalmos, open eye, umbilical hernia, shortened tail, twisted tail, hydrocephalus, fusion of ribs, forking of ribs, and fusion of vertebrae. The percentage of grossly malformed fetuses, resulting from treatment on the sixth day of gestation, was very low compared to that for days 7 to 11. Treatment on day 12 resulted in the resorption of most fetuses, but those that survived were morphologically normal.

Hood and Pike (1972) found that intraperitoneal injections of sodium arsenate in Swiss-Webster mice on the ninth day of gestation resulted in a significant increase in fetal mortality and malformation and decrease in fetal weight.

Treatment of pregnant mice consisted of single intraperitoneal injections of 40 mg of sodium arsenate in distilled water per kg of body weight. Control mice were injected with water or were not treated at all. All females were sacrificed on the eighteenth day of gestation. The fetuses from treated females had a high rate of resorption and death, gross malformations and skeletal defects, and had greatly reduced fetal weights compared to the fetuses of the controls.

Preliminary work in mice by Hood et al. (1977) showed that the intraperitoneal administration of sodium arsenate had a greater adverse effect on prenatal mortality, fetal weights, and morphological development than oral administration. On gestation days 9 and 10, pregnant albino Swiss-Webster mice (CD-1 strain) were treated with sodium arsenate in distilled water either intraperitoneally (40 mg/kg of body weight) or orally (120 mg/kg). Controls were treated with distilled water. The animals were sacrificed on gestation day 18. The maternal death rate was similar for both treatments, indicating similar levels of toxicity to the females. A dose of 120 mg/kg of sodium arsenate orally administered was required to obtain adverse prenatal developmental effects. There was a much lower level of fetal malformation in the orally treated mice than in those injected intraperitoneally. The intraperitoneal treatment resulted in decreased fetal weights, compared to the controls.

This effect was seen in the oral treatment only when given on day 10 of gestation.

Hood et al. (Undated) administered sodium arsenate orally to pregnant albino mice (CD-1 strain) on one of gestation days 7 through 15. Sodium arsenate was also administered intraperitoneally to other pregnant mice as a positive control. Preliminary studies with oral doses of 40, 50, 60, 80, and 100 mg/kg of sodium arsenate showed no significant differences in effects from the negative controls (water only). Sodium arsenate was then either orally (120 mg/kg) or intraperitoneally (40 mg/kg) administered to pregnant mice on the same series of days.

Compared to the negative controls, dead and resorbed fetuses from orally treated mice increased significantly only on day 11 ($p \leq 0.01$). In the positive control group, however, treatment on days 7, 8, 9, and 11 ($p \leq 0.05$) and 10, 13, 14, and 15 ($p \leq 0.01$) resulted in a significant increase in the number of dead and resorbed fetuses compared to the negative controls. The positive controls (ip) also had a higher prenatal mortality than the groups treated orally on days 7, 11, or 13 ($p \leq 0.01$) and 14 ($p \leq 0.05$).

The incidence of gross malformations from oral treatment did not increase significantly over the negative control values, although the results were suggestive of such an effect. However, intraperitoneal treatment

on days 9 ($p \leq 0.01$) and 10 ($p \leq 0.05$) resulted in an increase in malformations over the negative control values. The gross malformations that occurred most frequently with oral treatment were oligodactyly, micromelia, and kinked tail. Those associated with ip treatment were shortened jaw, exencephaly, open eyes, and kinked tail.

Skeletal malformations resulted from either oral or intraperitoneal treatment on day 9 and were significantly increased ($p \leq 0.05$) over the negative control values. Fewer defective fetuses were seen in litters from treatment on other days. The most common defect was fused ribs with some cases of fused vertebrae. There was no significant incidence of visceral defects.

Compared to the negative controls (water only), oral treatment resulted in significantly lower fetal weights on treatment days 10 and 11 ($p \leq 0.01$) and 15 ($p \leq 0.05$). Fetuses from females that received sodium arsenate by injection on days 7 or 10 ($p \leq 0.05$) or 9 ($p \leq 0.01$) weighed significantly less than those from females receiving only water.

Matsumoto et al. (1974) studied the effect of sodium arsenite on fetuses of pregnant ICR mice that were given the compound orally or intraperitoneally. One group of mice was given 10 or 20 mg of sodium arsenite/kg (body weight) intraperitoneally (ip) once a day on days 6, 7, and 8

after conception. Another group received 5 or 10 mg/kg (ip) once a day on days 9, 10, and 11 after conception. A third group was given 10, 20, or 40 mg/kg orally once a day on days 9, 10, and 11 after conception.

The percentage of malformed fetuses from ip-treated pregnant females was 3.5% (5 mg/kg) and 1.3% (10 mg/kg) compared to 1.2% for the controls (no statistical values given). The percentage of resorbed or dead fetuses was 7.3% (controls), 12.1% (5 mg/kg), and 45.8% (10 mg/kg). In the group of orally treated mice, the percentage of malformed fetuses was 5.7% (10 mg/kg), 0% (20 mg/kg), and 4.2% (40 mg/kg) compared to 0% for the controls (no statistical values given). The percent of resorbed or dead fetuses was 9.8% (controls), 4.5% (10 mg/kg), 5.5% (20 mg/kg), and 30.4% (40 mg/kg).

The malformations observed with oral treatment were bent tail, cleft palate, open eyelid, and bone deformities (40 mg/kg only). Malformations from ip treatment were open eyelid, bent tail, club foot, and kidney deformity (10 mg/kg only). From both ip and oral treatment there was reduced fetal growth and reduced ossification of cervical vertebrae and leg and tail bones.

Franke et al. (1936) tested the effect of sodium arsenite on the development of chick embryos. Sodium arsenite was injected into the eggs at the following concentrations: 0.01, 0.05, and 0.10 ppm. There were no

dead chicks in the group that received 0.01 ppm, but 6.7% had abnormalities of ectopic form (unspecified by the authors). At 0.05 ppm, 14.3% of the embryos were dead, and 14.3% of the survivors were abnormal. In the group that received 0.1 ppm of sodium arsenite, 83.3% of the embryos were dead. However, there were no abnormalities in the surviving chicks.

Ridgway and Karnofsky (1952) injected four- and eight-day-old white Leghorn chicken eggs with potassium arsenite, arsenic pentoxide, and sodium arsenate. When examined on the eighteenth day of incubation, 50% of the chicken embryos, injected via the yolk sac on the fourth day with 0.2 mg/egg of sodium arsenate, were stunted and showed mild micromelia and abdominal edema. This did not occur in the embryos injected on the eighth day. Potassium arsenite and arsenic pentoxide did not produce these effects.

Puzanova and Doskocil (1969) studied the effects of a pentavalent arsenical on white Leghorn chicken embryos. The embryos were given a single dose of 3 ug of arsenic subgerminally or intraaminally on either day 2, 3, or 4 of incubation. The embryos were collected at various times, then fixed and stained.

All embryos from day 2 treatment (collected on 8th day) survived the arsenic application and were normally differentiated.

Of those treated on day 3, 5 died and 19 survived. The dead embryos (collected 12 to 24 hours after treatment) showed abnormalities in the circulatory system (dilatation of vessels, extended heart, hemorrhaging in head and body) and in the brain vesicles (wrinkling). Of the surviving embryos (collected between incubation days 4 and 9), one had a deformed beak, and three had lordosis of the spinal lumbar region. Lordosis indicates a disturbance of amnion development resulting in compression of the embryo in the amnial pouch. There was also some wrinkling of the brain vesicles, body distortion, and inadequate formation of body walls. The other 15 embryos were differeniated normally but were smaller than the control embryos.

From day 4 exposure, 19 embryos died and 13 survived. The dead embryos were collected 12 to 72 hours after treatment. Twelve (12) had circulatory disorders (renostasis, heart dilatation, hemorrhaging), and others showed hyperlordosis, body distortion, wrinkled brain vesicles, and small amnion. Of the 13 survivors, 9 were normal, and 4 showed abnormalities such as impaired mesonephros, kyphosis of the body, hyperlordosis with scoliosis, and small, tight amnion.

In a study by Schroeder and Mitchener (1971), Charles River CD strain mice were bred in special facilities to avoid contamination from trace elements. At the time of weaning, five pairs of mice were selected randomly, fed special food, and given doubly deionized forest spring water. Drinking water containing 5 ppm of a soluble salt of arsenite (form not specified by author) was continuously available to the mice. The control mice received plain deionized water. The mice were allowed to breed at will for six months. Arsenite at this dose level did not affect the rate of growth or long-term survival and did not cause early mortality. In three successive generations of mice, arsenite given via drinking water resulted primarily in an increased ratio of males to females and in a reduction of the litter size.

The following studies showed no teratogenic effects in laboratory animals exposed to various inorganic arsenicals.

Kimmel and Fowler (Letter 1977b) gave pregnant rats either sodium arsenate or sodium arsenite in their drinking water (ad libitum) from gestation day 1 through 21 at exposure levels of either 30 or 90 ppm. There were no adverse effects on fetal weights, number of fetuses per litter, or number of malformations.

James et al. (1966) fed four pregnant yearling ewes potassium arsenate via gelatin capsule. The first ewe received 0.75 mg/kg daily from the first day of gestation.

However, after 18 days, the animal developed toxicosis, and the treatment was discontinued. A second ewe received 0.50 mg/kg daily for the first 45 days of gestation. The remaining two ewes were given 0.50 mg/kg of the salt for the entire gestation period (140 and 147 days respectively). The first ewe gave birth to "a full-term but hairy lamb" that weighed only 1.6 kg. The three other ewes produced normal lambs. Analysis of bone and soft tissue samples indicated that arsenate did not accumulate in detectable amounts in ewes fed arsenic throughout gestation or in lambs from ewes on the reduced treatments.

Morris et al. (1938) fed Osborne-Mendel rats and their offspring a diet containing either 26.8 or 215 mg of arsenic trioxide (approximately 9.2 and 79 mg/kg per day. respectively). The animals were fed the special diets ad libitum from four weeks of age to approximately one year of age.

The rats (P_1) were divided into two groups, one for each dose level. Each group contained 36 rats: 18 controls (9 of each sex) and 18 experimental rats (9 of each sex). The control animals received a diet that was adequate for growth and reproduction. The experimental groups were fed the same diet with the addition of arsenic trioxide. Both

groups of rats were mated at ages of 90 to 110 days as follows: control female x control male, control female x experimental male, experimental female x control male, experimental female x experimental male. Pairs of rats were placed in cages and given the control diet during the mating period, with the exception of experimental females with experimental males. Males were removed from the cages after females showed a positive smear for sperm.

The second generation (F_1) of rats was taken from the second litter of the P_1 females. These animals were given the same diet as their respective parent of the same sex. The mating patterns used for the P_1 groups were also used for the F_1 groups. Only one litter was obtained from this generation. The same patterns of mating were used again for the F_2 group.

No differences in fertility or fecundity were observed between the various experimental groups of both generations (P_1 and F_1) and the control groups. The average weights of P_1 females and their offspring showed no significant differences from the controls.

Kojima (1974) raised groups of male and female albino Wistar rats (P_1) and their offspring (F_1) on a diet containing arsenic (unspecified form, but measured as As_2O_3).

Different groups received various doses of arsenic (10, 50, and 100 ppm), and for each dose level there were five test groups of rats. Group I rats and their offspring received the control diet. Group II received the control diet; and after delactation, the young received the arsenic diet. Group III rats were fed the experimental diet, but the young were given the control food. Group IV rats received the experimental diet, but after delactation the offspring were given the control food. Group V rats and their offspring were fed only the arsenic diet.

The actual amount of arsenic ingested was determined by total food consumption. The P_1 rats each consumed an average of 270 g of food. The arsenic levels consumed by P_1 rats in Groups III, IV, and V were 2.7, 13.5, and 27 mg (10, 50, and 100 ppm respectively). Prior to delactation, F_1 rats of Groups IV and V ingested 0.5, 2.5, and 5 mg (10, 50, and 100 ppm respectively). After delactation, F_1 rats of Groups II and V ingested 10, 50, and 100 mg (10, 50, and 100 ppm respectively).

There were no differences in the number of litters between P_1 rats fed experimental diets containing arsenic and the control group of rats. The young of females raised on the diet containing 100 ppm of arsenic showed no effects in histopathological tests, breaking strength of bones, and Ca and P content of bones and teeth.

Pregnant mice, orally treated with 120 mg/kg of sodium arsenate (Hood et al. 1977; Undated) or 10 mg/kg sodium arsenite (Matsumoto et al. 1974), gave birth to young exhibiting both gross malformations and skeletal defects. Mice given sodium arsenite at 5 ppm in drinking water showed a reduction in litter size over three generations.

Based on these studies and the discussions in Section IV.A, the Agency concludes that there is sufficient evidence for the teratogenic effects of both trivalent inorganic arsenic (arsenite) and pentavalent inorganic arsenic (arsenate). Also there is evidence for the reproductive effects of trivalent inorganic arsenic.

In order to determine whether a rebuttable presumption should be issued on each inogranic arsenical based on these effects pursuant to Section 162.11(a)(3)(ii)(B), the Agency must determine whether an ample margin of safety exists between the levels of arsenate and arsenite which produce these effects and the levels to which humans can reasonably be anticipated to be exposed.

The levels of arsenate and arsenite which produce teratogenic effects discussed in this section of the position document are tabulated in Table 24. Of particular interest are the studies by Hood et al. (1977; Undated) and Matsumoto et al. (1974) in which arsenite or arsenate were administered orally to mice.

In the study by Matsumoto et al. (1974), arsenite was administered orally at dosages as low as 10 mg/kg. At this dosage several malformations (teratogenic effects) were observed including bent tail, cleft palate, and open eyelid. In addition to these effects the author observed reduced fetal growth, and reduced ossification of cervical vertebrae and leg and tail bones. The author did not determine a dosage level (NEL) at which teratogenic effects were not observed.

In the study by Hood et al. (1977; Undated), arsenate was administered orally to mice at 120 mg/kg. This dosage produced skeletal malformations such as fused ribs and some cases of fuses vertebrae. A dosage of 100 mg/kg (NEL) did not produce significant differences from controls.

In order to determine whether an ample margin of safety exists for each inorganic arsenical, the Agency must determine how much of each a 60-kg woman would be exposed to through oral, dermal, and/or inhalation exposure. These determinations were made in the Exposure Analysis (see Section III), and the results are duplicated here (Table 25).

For purposes of this analysis the margin of safety will be defined as the level (dosage in mg/kg) which produced

no observable effect (NOEL) divided by the anticipated exposure:

$$\text{Margin of Safety} = \frac{\text{NOEL}}{\text{Exposure}}$$

In case of inorganic arsenate the NOEL is 100 mg/kg (Hood Undated). For inorganic arsenite, however, all dosages tested produced teratogenic effects (Matsumoto et al. 1974). Therefore, because the NOEL has not been established for inorganic arsenite the lowest effect level [10 mg/kg (Matsumoto et al. 1974)] will be used in the calculation of the margin of safety for inorganic arsenite. It should be noted that if the NOEL for arsenite is found to be only slightly less than 10 mg/kg, this could represent a significant decrease in the corresponding margin of safety. The margin of safety for each use situation discussed in the exposure analysis has been calculated and can be found in table 25.

Table 25. Summary of the Total Theoretical Exposure To Inorganic Arsenic Resulting From the Use of Inorganic Arsenical Pesticides

Chemical or Use Situation	Total Theoretical Exposure (for a 60-kg Woman in mg/kg)	Margin of Safety
Agricultural Situations		
Sodium Arsenite (trivalent)	5.5	1.8
Arsenic Acid (pentavalent)	2.72	37
Sodium Arsenate (pentavalent)	0.65	154
Copper Acetoarsenite (trivalent)	0.32	31
Calcium Arsenate (pentavalent)	0.17	588
Arsenic Trioxide (trivalent)	0.68	15
Lead Arsenate (pentavalent)	0.66	152
Wood Preservative Situations (Sodium Pyroarsenate (Arsenic Trioxide*, Arsenic Pentoxide, Sodium Arsenate, Arsenic Acid, and Ammonium Arsenite*)		
Large Industrial Situations		
Inhalation Exposure	0.05	2000
Dermal Exposure	0.57 - 9.0	11 - 175
Intermittent Application to Wood During On-Site Construction		
Dermal Exposure to Ammonium Arsenite	1.1	91
Exposure From Handling, Sawing, Fabricating, etc, of Treated Wood Products		
Inhalation Exposure	0.27	370
Dermal Exposure	0.24	417
Exposure To Individuals Living or Working In Dwellings Containing Arsenic-Treated Wood		
Inhalation Exposure	$7X10^{-7}$ - 0.002	$5X10^{4}$ - $1.4X10^{8}$
Dermal Exposure	0.03 - 2.59	39 - 3333

* During the formulation of wood preservatives, all trivalent arsenic is oxidized to pentavalent arsenic; therefore, the NOEL for arsenate (100 mg/kg) was used in calculating the margin of safety for all wood preservatives.

It is generally recognized that humans vary in their susceptibility to a toxicant and that humans may, for a variety of reasons, be more sensitive than laboratory animals. Therefore, the Agency concludes that an ample margin of safety does not exist for any use of the inorganic arsenicals and recommends that a rebuttable presumption be issued against the following: ammonium arsenite, arsenic acid, arsenic pentoxide, arsenic trioxide, calcium arsenate, copper acetoarsenite, lead arsenate (basic and standard), sodium arsenate, sodium arsenite, and sodium pyroarsenate.

V. OTHER RELEVANT ADVERSE EFFECTS

This section addresses certain criteria for determination of unreasonable adverse effects which arsenic may produce, but for which insufficient evidence exists to initiate a rebuttable presumption. The Agency requests registrants or other interested persons, having information on these or any other possible adverse effects of inorganic arsenic, to submit such data to the Agency.

A. Delayed Neurotoxicity

Landau et al. (1977) did a pilot study of male workers in a copper smelter using ores high in arsenic (previously studied by Milham and Strong, and Pinto and McGill). Three groups of men were studied. The first group were workers from an area of high arsenic exposure who had 200 ug/liter of arsenic in urine samples for at least the last five years. The second group were workers from a low arsenic exposure area, and the third group consisted of workers from an aluminum plant (no arsenic exposure) and from non-industrial settings.

The men received a clinical and a neurological examination and completed a personal questionnaire. Samples of their blood, urine, hair, and nails were taken. The neurological examination consisted of sensory and/or motor nerve conduction studies on three nerves: the right ulnar (sensory and motor), the right common peroneal (motor), and the right sural (sensory). Both conduction and amplitude were measured for each nerve using standard techniques with surface electrodes.

Urinary arsenic levels corresponded well with worker exposure to arsenic. Nail and hair analyses also clearly distinguished the test groups. Blood arsenic was determined not to be a useful measurement of arsenic exposure.

Exposure to other metals was also investigated. Copper in the blood and urine did not differentiate the groups, while copper levels in the hair did. Cadmium, nickel, and zinc levels in nail tissue were highest in both of the smelter worker groups. Lead values in urine, blood, nails, and hair were generally highest in the smelter workers.

Neurological findings were based on a clinical examination for neuropathies and an objective electrical measurement. From a preliminary analysis, a dose-response relationship was not clearly evident. There was a weak association between the clinical and the objective electrical measurements of the neurological status of each man. A multivariate analysis was used to further study the association of neurological abnormalities from exposure to arsenic and other metals. There was a relationship between lower ulnar sensory amplitude, lower peroneal conduction velocity, and lower peroneal amplitude at the ankle and knee with higher levels of arsenic in urine, hair, and nails.

After further analysis, the authors concluded that there is a statistically significant relationship between arsenic levels (exposure) in body tissues and reduced neurological response. The clinical examination showed that a higher percentage of the smelter workers had some form of neuropathy compared to the control group. This was after diabetes, trauma, cigarette and alcohol use, use of drugs, and other relevant factors were taken into account. The authors also discussed the various sources of error in the study such as individual day-to-day variability, proximity of workers' homes to the smelter stack, and the effect of age on the neurological responses tested.

Mizuta et al. (1956) reported on 220 patients of all ages who had been poisoned by contaminated soy sauce, with an average estimated ingestation of roughly 3 mg of arsenic (probably calcium arsenate) daily for two to three weeks. In this group, 85% had facial edema and anorexia; fewer than 10% had exanthemata, desquamation, and hyperpigmentation; and about 20% had peripheral neuropathy. Although the majority of the patients' livers were enlarged, relatively few abnormalities were found in liver-function tests; the histopathologic description of five liver biopsies did not reveal severe degenerative changes. There were no findings suggestive of congestive failure, but

electrocardiograms were abnormal in 16 of 20 patients. The patients' symptoms tended to diminish after five or six days, despite continued intake of arsenic, and neurologic symptoms became prominent as much as two weeks after arsenic ingestion was discontinued, at which time urinary arsenic content remained high. Hair was found to contain arsenic at 2.8 to 13.0 ppm near the root, compared with 0.4 to 2.8 ppm in hair near the root from control patients.

Ohira and Aoyama (1973) organized an epidemiological study on babies that drank arsenic-tainted milk in 1955 in Japan. The number of victims was 12,159, of whom 131 died. The disaster was caused by an arsenic-contaminated milk stabilizer.

A survey was made of 214 people of whom 74 were given medical examinations. A questionnaire collected in 1955 was reresiewed. Comparative studies were done on the victims and their brothers and sisters, and on handicapped children in institutions (born from 1953 to 1955) who drank arsenic-tainted milk, those who drank a noncontaminated powdered milk, and those who were fed only maternal milk. Another study was done on children (born between 1954 and 1955) in a district where good records had been kept of their physical growth and mental development through school. They were divided into the same groups as the above study. Examinations were made of 124 patients in another district.

The exposed group had a statistically significant higher rate of the following problems compared to the two control groups. There was apparently no distinct difference between these groups in their prenatal and postnatal development before ingestion of the contaminated milk. The victims had a lower intelligence quotient than their brothers and sisters. Among mentally retarded children in one district, the victim group had a higher rate of severe retardation (IQ below 50) than children who had not consumed the arsenic-tainted milk. The victims showed growth retardation from the age of one year to school age compared to the other groups. There was a higher prevalence of myopia; abnormal EEG findings; higher DMF rate (number of decayed, missing, or filled teeth); and abnormal X-ray findings in facial shape. Although not statistically significant, there was a higher rate of the following problems: mortality, abnormal ophthalmoscopic findings, growth retardation during the school years, retardation of skeletal growth (including finger size), higher peridontal disease rate, narrow vision range, and abnormal X-ray findings in teeth. The authors concluded that the victims were still suffering from many physical and mental disorders after 17 years.

B. Hazard to Wildlife

(1) Population Reductions in Nontarget Aquatic Organisms

40 CFR Section 162.11(a)(3)(ii)(C) provides that a "rebuttable presumption shall arise if a pesticide's [use]...[c]an reasonably be anticipated to result in significant local, regional, or national population reductions in nontarget organisms...."

Menhinick (1962) listed the following possible adverse effects which may result from introduction of pesticides into various ecosystems: a decrease in the number of species and/or genera, a decrease in number and species of large organisms, a compensating increase in numbers of tolerant species, and a shift in trophic structure in favor of lower trophic levels.

When sodium arsenite was registered for use as an aquatic herbicide, it was recommended that arsenic content in treated fresh water not exceed 0.05 ppm (Goudey 1946); a limit of 10 mg/liter [ppm] of arsenic contamination has been recommended for estuarine waters (Lincer 1975).

Except for use of copper acetoarsenite in mosquito control programs, there are no inorganic arsenicals registered for aquatic uses. Indirect sources of arsenic contamination of fresh and marine/estuarine waters, which may adversely affect aquatic organisms, include drift and runoff from agricultural application of inorganic arsenicals, as well as use of wood (for pilings and docks) treated with inorganic arsenical wood preservatives.

(a) Phytoplankton, Zooplankton, and Invertebrates

Reduction in populations of plankton and aquatic invertebrates can have indirect adverse effects on higher organisms by reducing numbers of oxygen-producing algae and through depletion of food sources (Ball and Hooper 1966).

Surber and Meehan (1931) conducted experiments which showed that 2.0 ppm arsenious oxide [arsenic trioxide] equivalent in a commercial sodium arsenite formulation would not kill important fish food organisms. The most sensitive species were chironomid larvae, mayfly nymphs, and fresh water shrimp; these species showed relatively high mortality rates on exposure to 2.5 to 4 ppm As_2O_3. Other studies, however, have shown that use of sodium arsenite can reduce numbers of fish food

organisms. Lawrence (1958) performed studies which showed that two applications to experimental ponds of 4 ppm As_2O_3 as sodium arsenite one month apart reduced the number of bottom invertebrates an average of 34% as compared to control ponds; two applications of 8 ppm As_2O_3 one month apart reduced bottom invertebrates an average of 45% as compared to controls. An application of 4 ppm As_2O_3 one year later to the ponds which had received two applications of 4 ppm resulted in an average increase of 33% in bottom organisms; application of 4 ppm to ponds which had received two applications of 8 ppm, however, resulted in an average decrease of 20% in bottom organisms. The authors also noted that an application of 4 ppm As_2O_3 as sodium arsenite to experimental ponds had killed all the microcrustacae and greatly reduced the population of rotifers.

Cowell (1965) studied the effects of sodium arsenite on plankton populations in farm ponds. At concentrations of 4 ppm during two successive years, sodium arsenite significantly decreased zooplankton populations from at least one sampling depth in three of four treated ponds during the first year; during the second year, sodium arsenite at 4 ppm significantly reduced zooplankton populations, especially rotifers.

Ball and Hooper (1966) studied the effects of ^{74}As-labelled sodium arsenite on pond ecology. A pond with 1/3 acre surface area and a depth of 2 meters was treated with 8 ppm sodium arsenite. Results of the pond study showed that the treatment destroyed a major portion of the phytoplankton. In addition, the number and volume of bottom invertebrates was reduced; reduction ranged from 57% for dragonflies to 100% for mayflies. The authors concluded that sodium arsenite "persists in the ecosystem at low concentration levels and that it has an adverse effect upon many components of the system. Sodium arsenite kills many organisms important to the economy of the pond and modifies the primary producers to such an extent that production is seriously affected."

Gilderhus (1966) also studied the effects of sodium arsenite, at sublethal concentrations, on bottom invertebrates and plankton (Table 26). Nine concrete ponds, with surface measurements of 0.01 acre, were treated with varying concentrations of sodium arsenite over a 16-week period. Table 26 shows the results of the these treatments on bottom organisms and microorganisms.

Table 26. Effects of Arsenic Treatments on Populations of Invertebrates and Microorganisms

Pool	Total Sodium Arsenite Applied (ppm)	Avg. # Bottom[a/] Organisms per sq ft	Avg. # Micro-[b/] organisms per liter
1	4.0	24.7	3,707
2	1.2	99.0	2,328
3	0.4	68.1	3,194
4	4.8	27.9	417
5	1.6	73.4	2,643
6	0.0	58.9	1,211
7	19.2	6.3	178
8	6.4	21.3	1,754
9	0.64	64.1	1,847

a/ Ten families were represented: Oligochaeta, Nematomorpha, Ephemeroptera, Odonata, Coleoptera, Hemiptera, Chaoborinae, Tendipedidae, Ceratopogonidae, and Tabanidae.
b/ Populations counted were rotifers, Cladocera, copepods (adults and nauplii), and microcrustaceans.

Gilderhus (1966) noted that the average numbers of bottom invertebrates in pools at the four highest treatment levels were less than one-half the average found in the other treated pools and control. With regard to plankton, the two pools with the highest treatment levels had substantially reduced average numbers of microorganisms, particularly rotifers. The author also stated that total numbers of microcrustaceans, which are valuable fish foods, appeared greatly reduced in all pools which received totals of 4 ppm or more.

(b) Fish

The PERS report (EPA 1977) on inorganic arsenic (see Section I.H) lists one episode involving an unspecified arsenical in a fish kill in 1973. An unknown number of fish in a pond near a soybean field were killed. The pond had apparently been contaminated by waste cans and containers of pesticides, including linuron, alachlor, trifluralin, and paraquat. The arsenic content of the water was 73 ppm. There was insufficient evidence either to prove or disprove involvement of arsenic.

Table 27 shows the acute toxicities of sodium arsenite and arsenate to various aquatic species. Other studies indicate possible adverse effects of inorganic arsenic to aquatic organisms at levels below acute toxicity concentrations.

Table 27. Acute Toxicity of Sodium Arsenite and Arsenate to Fresh Water and Marine/Estuarine Species (in ppm)

Sodium Arsenite	24-hr	48-hr	96-hr	Reference
Daphnia sp.		9.1		Mackenthun 1960
Water flea (Daphnia pulex)		1.8		Cope 1966

Goldfish (Carassius auratus)		32		Weir & Hine 1970

a/ 93-hr LC-50.
b/ 29-hr LC-50.
c/ 72-hr TL-50.

A study by Wiebe (1930) concluded that fingerling stages of four species of game fishes and three species of forage fishes exposed to concentrations of sodium arsenite ranging from 2 to 7 ppm for varying periods of time did not show any harmful effects. Species used in the study were largemouth black bass (Micropterus salmoides), smallmouth black bass (M. dolomieu), white crappie (Pomoxis annularis), bluegill (Lepomis incisor), golden shiner (Notemigonus crysoleucas), goldfish (Carassius auratus), and bullhead (Ameiurus nebulosus).

Since copper acetoarsenite is insoluble in water, it is generally regarded as nontoxic to fish. Bishop (1940) reported on the effects of copper acetoarsenite for mosquito control in Wheeler Reservoir in Tennessee, applied at about one pound per acre. The author noted that treatments showed no deleterious effect upon vegetation; there was no evidence of a "catastrophic destruction" of aquatic organisms important as fish food; and soil samples showed accumulation of arsenical residues in variable amounts in the bottom of reservoirs.

In another study on copper acetoarsenite, McCormick (1940) attempted to determine the amount of arsenic exposure to fish from mosquito-control dusting. Fish used in

the study were mosquitofish (Gambusia patruelis), catfish (Ameiurus melas), killifish (Fundulus dispar), and silversides (Labidesthes sicculus). Fish were treated with 2 to 6 grams of pure or mixture paris green. Out of 15 series of tests, two were discarded because of procedural errors. Of the remaining 13 series of tests, eight were listed as showing positive results for arsenic residues, and five were negative. Of these, however, two series which showed positive results were rejected because the fish had not been adequately washed, and particles of copper acetoarsenite in the water could have adhered to their skin; one negative result was also rejected because tests were run only on very small, individual fish. Amounts of arsenic found ranged from trace to 0.1 mg. The author noted that Gambusia were able to withstand total dosages of 18 and 20 grams of copper acetoarsenite (56 to 60 ppm arsenic trioxide).

Grindley (1946) studied the effects of sodium arsenite and sodium arsenate on minnows (Phoxinus phoxinus). Toxicity to fish was determined by when they had permanently overturned (i.e., lost equilibrium). At a concentration 47.5 ppm sodium arsenite, it took an average of 19 hours before fish had overturned; at 17.8 ppm, it took an average of 36 hours.

At 234 ppm sodium arsenate, it took an average of 15.85 hours before fish had overturned; at 610 ppm, it took an average of 9.05 hours. None of the fish exposed to sodium arsenite or sodium arsenate recovered after removal to fresh water. The author also noted that "smaller concentrations [of arsenic] acting over long periods in a river would [probably] damage a fishery, either by their continued action on the fish themselves or by their toxic action on other aquatic organisms which serve as the food of the fish."

Gilderhus (1966) studied some effects of sublethal concentrations of sodium arsenite on adult and immature bluegills (Lepomis macrochirus). Chronic toxicity to fish was based on survival, growth, hematocrit measurements, ratio of gonad weight to body weight, and pathological changes in tissues. Nine concrete pools were treated with varying concentrations of sodium arsenite over a 16-week period.

Neither hematocrit measurements nor gonad-to-body weight ratios could be related to arsenic concentration.

Survival, however, was definitely affected. In immature bluegills, survival decreased as the amount of arsenic treatment increased. Only 18% of immature fish

survived after 16 weeks in a pool receiving a total treatment of 19.2 ppm sodium arsenite, compared to 90% survival in the control pool. Survival of immature fish in pools receiving totals of 1.2, 4.0, and 4.8 ppm sodium arsenite was also reduced compared to controls (54, 52, and 45%, respectively). Survival of adult bluegill was 31% in the pool receiving 19.2 ppm, compared to 60% in controls. Survival of adults in all other treated pools ranged from 50 to 62%.

Growth (length and weight gain) for immature bluegill declined as sodium arsenite concentrations increased. Adult bluegills remained about the same length during the experiment, but adults at the four highest concentrations gained less weight, on average, by four to six grams (25 to 37% of their weight at the experiment's start). Control fish, however, did not have a higher final weight than fish from some treated pools. The author could not account for this but speculated that light arsenic treatment enhanced conditions for growth.

Only adult fish from the control pool and fish from pools which received weekly treatments were examined histopathologically. Exposed fish had more hemorrhagic globes on the gills than controls. Among other symptoms noted in some exposed fish, and not seen in control fish, were fat infiltration of the liver, vacuolation of the

cytoplasm of hepatic cells, foci of necrosis, and a massive extravasation of erythrocytes, which lifted the lining of the ventricle of the heart, along with interventricular fibrin and necrotic cells. In addition, in ovaries of fish from heavily treated pools, 20 to 50% of the oogonia and primary and secondary oocytes appeared as encapsulated cells. Mature ova appeared normal, but ovaries contained fewer packed cells than normal organs.

The author noted that applications of 4.0 ppm or more of sodium arsenite in one year inhibited growth of both adult and immature bluegills, and adversely affected survival of immatures. Among adults, residues of about 5.0 ppm in flesh were associated with severe loss of weight and high mortality; growth was slowed slightly with residues in flesh between 1 and 3 ppm.

Weir and Hine (1970) studied impairment of conditioned behavior of goldfish (Carassius auratus) by various metals, including sodium arsenate. Goldfish conditioned to avoid electric shocks were exposed to sublethal amounts of sodium arsenate for 24 and 48 hours. The authors found that the lowest arsenic concentration which significantly impaired conditioned behavior was 0.1 ppm, or 1/320 of the LC-50 and 1/15 of the LC-1. The authors noted that deleterious

effects [i.e., impairment of conditioned behavior] were demonstrated below the arsenic levels currently accepted as safe.

Sorensen (1976b) studied thermal effects on accumulation of arsenic in green sunfish (Lepomis cyanellus). Nine groups of 20 fish each were acclimated in aquaria at 10°C [=50°F], 20°C [-68°F], and 30°C [=86°F] (three groups for each temperature level). One group at each temperature was then exposed to 0, 30, and 60 ppm sodium arsenate for five weeks. Every third day, the fish were placed in fresh test solutions. At weekly intervals for five weeks, two live fish were collected at random from each of the nine treatments. Liver, right muscle fillet, and guts (without contents) were analyzed for arsenic content. (For results of these analyses, see Table 28.)

Sorensen reported that the LT-50 (times for 50% mortality), at the same arsenic concentration, increased as temperature increased. At 60 ppm arsenic, the LT-50 at 10°C was 678 hours, at 20°C 210 hours, and at 30°C 124 hours. At 30 ppm arsenic, the LT-50 values at 20 and 30°C were 527 and 209 hours, respectively. The author concluded that arsenic uptake in liver, gut, and muscle increased with increasing temperature, arsenic concentration, and length of exposure.

Table 28 . Tissue uptake of arsenic (ug/mg wet weight)[a/] by the green sunfish

Degree C and arsenic concentration in ppm	Liver Uptake Weeks 1st	2nd	3rd	4th	5th
10°C; 0 ppm	0.03	0.03	0.03	0.03	0.03
10°C; 30 ppm	0.03	0.06	0.12	0.12	0.21
10°C; 60 ppm	0.03	0.09	0.135	0.15	0.24

a/ Values derived from author's graphs and may not be exact.
b/ No fish remained alive at these concentrations for these time periods.
ND = Not detected; NM = Not measured.

The Agency points out that, particularly for aquatic food organisms (phytoplankton, zooplankton, and invertebrates), arsenic produced the adverse effects listed by Menhinick (1962), even at sublethal concentrations. The Agency also notes the possibility of long-term adverse effects on larger aquatic organisms from sublethal arsenic concentrations. The Agency is concerned that indirect contaminations of water from use of arsenical pesticides could have long-term adverse effects on aquatic organisms through reduction in numbers of food organism and oxygen-producing algae (Lawrence 1958; Cowell 1965; Ball and Hooper 1966; and Gilderhus 1966) and through adverse effects on survival ability of larger aquatic organisms (Gilderhus 1966; Weir and Hine 1970).

(2) Population Reductions in Nontarget Mammalian Wildlife

Swiggart et al. (1972) reported on eleven dead deer (8 females, 3 males) that were found in a 600 acre area of Tennessee, which recently had been treated with an arsenical herbicide containing 39.6% arsenic acid. The product was applied aerially to agricultural land for control of Johnson grass at the rate of five gallons of mixture per acre (prepared in the ratio of 1 gallon of herbicide to 9 gallons of water). This particular use of the pesticide violated the USDA registration of the product.

Qualitative and quantitative analyses by laboratories showed a high level of arsenic in deer tissue specimens and in samples of water, soil, and vegetation from the area.

Boyce and Verme (1954) studied the effect of sodium arsenite, used as a tree debarking agent, on wildlife mortality in both commercially treated plots and controlled study areas. In several debarking test plots set up by lumber companies in Michigan, a number of deer, porcupines, and snowshoe hares were found dead. Analyses of the digestive organs indicated arsenic as the cause of death. Several controlled experiments were done on confined deer exposed to trees girdled and treated with sodium arsenite. In some studies, deer remained healthy and apparently did not lick the treated trees. In similar studies, some deer died from arsenic poisoning as shown by tissue analyses.

In a mineral preference test, two groups of adult and yearling does were exposed to trees treated with sodium, potassium, and ammonium arsenite, as well as sodium chloride. Sodium arsenite was only slightly more preferred than the other compounds, including sodium chloride. In another study, potassium arsenite was used instead of the sodium salt to determine if one form is more attractive to deer. No deer were found dead. Penned deer were exposed to sugar cubes dyed various colors to determine if the red dye added to commercial sodium arsenite

formulations was attractive to deer. Deer showed only a slight preference for the red cubes.

From toxicity tests on confined deer, it was determined that only small amounts of arsenite were required to produce mortality. Death usually occurred within a relatively short time after ingestion. In one test, a yearling doe died 12 hours after ingesting a total of 4 cc of arsenite (potassium and sodium salts) in food pellets. Ingestion of foliage from treated trees caused no observable ill effects.

The animals apparently did not obtain the sodium arsenite from the girdled area of the trees but came in contact with the spillage at the base of the trees.

PESTICIDE PROGRAMS

Notice of Rebuttable Presumption Against Registration and Continued Registration of Pesticide Products Containing Pentachlorophenol

AGENCY: Office of Pesticide Programs, Environmental Protection Agency (EPA).

ACTION: Notice of rebuttable presumption.

SUMMARY: Pentachlorophenol and its derivatives (henceforth referred to as PCP) have been found to exceed certain risk criteria set forth in 40 CFR 162.11. This notice requests registrants and other interested persons to submit rebuttals and other information on the presumption and to submit any other data on the risk and benefits of this pesticide chemical. This notice is the first of several which will give public notification of the Agency's progress in reviewing this chemical. Today EPA is also publishing in the FEDERAL REGISTER notices of rebuttable presumption against registration (RPAR) on Inorganic arsenic and coal tar, creosote, and coal tar neutral oil. inorganic arsenic, PCP, and coal tar and derivatives comprise the most widely used of pesticide wood treatments available. Therfore, the wood treatment uses of these pesticides will be considered together in the risk/benefit part of the RPAR review process. Other uses for these pesticides will be considered in individual risk/benefit analyses for each chemical.

DATE: Rebuttal evidence and other information must be received on or before December 4, 1978.

ADDRESS MATERIAL TO: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Daniel P. Cirelli, Special Pesticide Review Division, Office of Pesticide Programs (TS-791), Room 447, East Tower, EPA, 202-755-2972.

SUPPLEMENTARY INFORMATION: The Deputy Assistant Administrator, Office of Pesticide Programs, EPA, has determined that a rebuttable presumption exists against registration and continued registration of all pesticide products containing pentachlorophenol.[1]

Issuance of this RPAR means that potential adverse effects associated with the use of pentachlorophenol have been identified and will be examined further to determine if they do exist and, if so, whether they are unreasonable. This process involves a public review of both the risks and the benefits associated with the uses of the pesticide. The RPAR does not mean that the Agency has decided to cancel or to take any other action with respect to it; EPA has not made a finding that use of any products containing this ingredient presents an imminent hazard. Any pesticide subject to this RPAR may lawfully be sold, distributed, and used for all uses for which it is registered and labeled.

I. REGULATORY PROVISIONS

A. *General.* Title 40, Part 162.11, of the Code of Federal Regulations for the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended (86 Stat. 973, 89 Stat. 751, 7 U.S.C. 136 et seq.), provides that a rebuttable presumption against registration shall arise if the Agency determines that a pesticide meets or exceeds any of the risk criteria relating to acute and chronic toxic effects set forth in section 162.11(a)(3). If it is determined that such a rebuttable presumption has arisen, the regulations require that the registrant be notified by certified mail and afforded an opportunity to submit evidence in rebuttal of the presumption. In addition, the Agency has determined that the public should also be given notice of the bases for the presumption to provide an opportunity for comment and to solicit additional information relevant to the presumption.

A notice of rebuttable presumption against registration is issued when the evidence related to risk meets the criteria set forth in section 162.11(a)(3). It is emphasized that a notice of rebuttable presumption against registration and continued registration of a pesticide is not a notice of intent to cancel the registration of a pesticide, and may or may not lead to cancellation. The notice of intent to cancel is issued only after the risks and benefits of a pesticide are carefully considered and it is determined that the pesticide may generally cause unreasonable adverse effects to the environment.

All registrants and applicants for registration are invited pursuant to 40 CFR 162.11(a)(4) to submit evidence in rebuttal of the presumptions listed in part II of this notice and, in the case of oncogenicity, to submit information which relates to the assessment of oncogenic risks as set forth in the Agency's Interim Procedures and Guidelines for Health Risk and Economic Impact Assessment of Suspected Carcinogens (May 25, 1976; 41 FR 21402). Registrants and other interested parties may submit for consideration data on benefits which they believe would justify registration or continued registration. In addition, any registrant may petition the Agency to voluntarily cancel a current registration pursuant to section 6(a)(1) of FIFRA.

B. *Rebuttal criteria.* Section 162.11(a)(4) provides that a registrant may rebut the presumption by sustaining the burden of proving:

(1) In the case of a pesticide presumed against pursuant to the acute toxicity or lack of emergency treatment criteria, "that when considered with the formulation, packaging, method of use, and proposed restrictions on and directions for use and widespread and commonly recognized practices of use, the anticipated exposure to an applicator or user and to local, regional, or national populations of nontarget organisms is not likely to result in any significant acute adverse effects" (40 CFR 162.11(a)(4)(i));

(2) In the case of a pesticide presumed against pursuant to the chronic toxicity criteria, "that when considered with proposed restrictions on use and widespread and commonly recognized practices of use, the pesticide will not concentrate, persist or accrue to levels in man or the environment likely to result in any significant chronic adverse effects" [40 CFR 162.11(a)(4)(ii)]; or

(3) In either case, that "the determination by the Agency that the pesticide meets or exceeds any of the criteria for risk was in error" [40 CFR 162.11(a)(4)(iii)].

C. *Benefits information.* In addition to submitting evidence to rebut the presumption of risk, section 162.11(a)(5)(iii) provides that a registrant "may submit evidence as to whether the economic, social and environmental benefits of the use of the pesticide subject to the presumption outweigh the risk of use." If the risk presumptions are not rebutted, the benefit evidence[2] submitted by the

[1] A position document, containing an appendix of references, background information, and other material pertinent to the issuance of this notice, has been prepared and is also published with this notice.

[2] Registrants or other interested persons who desire to submit benefit information should consider submitting information on the following subjects, along with any other relevant information they desire to submit:

1. Identification of the major uses of the pesticide, including estimated quantities used by crop or other application.

2. Identification of the minor uses of the pesticide, including estimated quantities used by category such as lawn and garden uses and household uses.

3. Identification of registered alternative products for the uses set forth in (1) and (2) above, including an estimate of their availability.

4. Determination of the change in costs to the user of providing equivalent pesticide treatment with any available substitute products.

Footnotes continued on next page

registrant, applicants, and other interested persons will be considered by the Administrator in determining the appropriate regulatory action. Specifical-

tion document, the Agency has concluded that registrations and applications for registration of pesticide prod-

If a registrant or applicant does assert a confidentiality claim for some but not all, of the information submit-

and analysis thereof, which come to the attention of the Agency may serve as a basis for final determination pur-

V 4 3 1 2 0 2 0 OCT 18 78

registrant, applicants, and other interested persons will be considered by the Administrator in determining the appropriate regulatory action. Specifically, section 162.11(a)(5)(iii) provides that if the "benefits appear to outweigh the risks," the Administrator may issue a notice of intent to hold a hearing pursuant to section 6(b)(2) of FIFRA to determine whether the registration(s) should be canceled or application(s) denied. Alternatively, if the "benefits do not appear to outweigh the risks, the Adminstrator shall issue a notice pursuant to section 3(c)(6) or section 6(b)(1) of the Act, as appropriate." Moreover, if at any time the Administrator determines that a pesticide poses an "imminent hazard" to humans or the environment, a notice of suspension may be issued pursuant to section 6(c) of the Act.

II. Presumptions

Registrations and applications for registration of pesticide products containing pentachlorophenol meet or exceed the 40 CFR 162.11(a)(3) risk criteria relating to teratogenic and/or fetotoxic effects in mammalian test species. The Agency's basis for concluding that these risk criteria have been met or exceeded is set out in "Pentachlorophenol: Position Document 1," which follows. Copies of attachments to the position document which are not published with this notice are available for public inspection in the office of the Special Pesticide Review Division. Information protected from disclosure pursuant to FIFRA Section 10 cannot be provided. Specific inquiries concerning the position document, as well as requests for access to these files, should be directed to Project Manager Daniel Cirelli, Special Pesticide Review Division (TS-791), EPA, Room 447, East Tower, 401 M Street SW., Washington, D.C. 20460, 202-755-2972.

A. *Chronic or delayed toxic effects.* 40 CFR Section 162.11(a)(3)(ii)(B) provides that a rebuttable presumption shall arise if a pesticide "(p)roduces any other chronic or delayed toxic effect in test animals at any dosage up to a level, as determined by the Administrator, which is substantially higher than that to which humans can reasonably be anticipated to be exposed, taking into account ample margins of safety * * *."

On the basis of scientific studies and information summarized in the position document, the Agency has concluded that registrations and applications for registration of pesticide products containing pentachlorophenol exceed this risk criterion for teratogenicity and fetotoxicity and that a rebuttable presumption against new or continued registration of such products has arisen.

III. Additional Grounds for Review

As discussed in detail in the attached position document, some data has associated pentachlorophenol with mutagenic effects in test organisms. The data and analyses available at this time with respect to this effect are not sufficient to warrant the issuance of a rebuttable presumption. The Agency specifically solicits further evidence bearing on these possible adverse effects. All comments and information received with respect to the potential adverse effects, including analysis thereof, may serve as a basis for a final decision on registering pesticide containing pentachlorophenol.

IV. Rebuttal Submission Procedures

All registrants and applicants for registration listed below are being notified by certified mail of the rebuttable presumption existing against registration and continued registration of their products.

The registrants and applicants for registration shall have 45 days from the date this notice is sent or until December 4, 1978, to submit evidence in rebuttal of the presumption. However, the Administrator may, for good cause shown, grant an additional 60 days during which such evidence may be submitted. Notice of such an extension, if granted, will appear in the Federal Register.

A registrant or applicant for registration may, if it desires, assert a business confidentiality claim covering part of all of the information submitted in rebuttal. The registrant or applicant may assert the claim by placing on or attaching to the information a cover sheet, stamped or typed legend, or other suitable form of notice employing language such as "trade secret," "proprietary," or "company confidential." Allegedly confidential protions of otherwise nonconfidential documents should be clearly marked.

If a confidentiality claim is asserted, the information covered by the claim will be disclosed by EPA only to the extent and by means of the procedures set forth in 40 CFR Part 2, Subpart B (41 FR 3690; September 1, 1976). If no confidentiality claim accompanies the information at the time it is received by EPA, EPA will place the information in the public comment file where it will be available for public inspection.

If a registrant or applicant does assert a confidentiality claim for some but not all, of the information submitted to EPA in rebuttal, the registrant or applicant should furnish two copies of the information to EPA. The first copy should contain all of the information submitted in rebuttal with information claimed as confidential clearly identified. The second copy should be identical to the first except that all information claimed as confidential should be deleted. The second copy will be placed in the public comment file. The first copy will be treated in accordance with the procedures set out above.

V. Duty To Submit Information on Adverse Effects

Registrants are required by law to submit to EPA any additional information regarding any adverse effects on man or the environment which comes to a registrant's attention at any time, pursuant to section 6(a)(2) of FIRFRA and 40 CFR 162.8(d). If any registrant of pentacholorophenol products has any published or unpublished information, studies, reports, analyses, or reanalyses regarding any adverse effects in animal species or humans, residues, and claimed or verifed accidents to humans, domestic animals, or wildlife, which have not been previously submitted to EPA, the material must be submitted immediately. When responding to this notice, each registrant shall submit a written certification to the Agency that all information regarding any adverse effects known to the registrant has been submitted. In addition, the registrants should notify EPA of any studies currently in progress, including the purpose of the study, the protocol, the approximate completion date, and a summary of all results observed to date.

VI. Public Comments and Inspection

During the time allowed for submission of rebuttal evidence, specific comments on the presumptions set forth in this notice and on the material contained in the position document are solicited from the public. In particular, any documented episodes of adverse effects to humans, domestic animals, or wildlife, and information as to any laboratory studies in progress or completed are requested to be submitted to EPA as soon as possible. Specifically, information on the fate and effects of pentachlorophenol, its impurities, metabolites, and degradation products on flora and fauna, particularly animals with metabolism similar to man, is solicited. Similarly, any studies or comments on the benefits from the use of pentachlorophenol are requested to be submitted. All comments and information received, as well as any other relevant information

Footnotes continued from last page

5. Assessment of regulation impact upon user productivity (e.g., yield per acre and/or total output) from using available substitute pesticides or from using no other pesticides.

6. If the impacts upon either user costs or productivity are significant, a qualitative assessment of the regulation's impact on production of major agricultural commodities and retail food prices of such commodities.

and analysis thereof, which come to the attention of the Agency may serve as a basis for final determination pursuant to § 162.11(a)(5).

All comments and information should be sent to the office of the Federal Register Section at the address given above, it possible in triplicate to facilitate the work of the Agency and others interested in inspecting them. The comments and information should bear the identifying notation "OPP-30000/30." Comments received after the specified time period will be considered only to the extent feasible, consistent with the time limits imposed by 40 CFR 162.11(a)(5)(ii).

All written comments and information filed pursuant to this notice will be available for public inspection in the office of the Federal Register Section from 8:30 a.m. to 4 p.m. during normal working days. Interested persons are encouraged to take advantage of the opportunity to inspect Agency files during normal working hours since (1) all of the information received may serve as a basis for final determination pursuant to § 162.11(a)(5) and (2) the Agency will not generally publish a summary of information received in the Federal Register at the close of the rebuttal period.

Your cooperation is solicited in identifying any errors or omissions which may have been made in the following computer listings. Corrections to the listings may not necessarily be published in the Federal Register, but rather handled by mail with affected parties. Omissions will be corrected by notice in the Federal Register.

Dated: September 30, 1978.

Edwin L. Johnson,
Deputy Assistant Administrator for Pesticide Programs.

PENTACHLOROPHENOL

POSITION DOCUMENT 1

Daniel P. Cirelli, Project Manager
U.S. Environmental Protection Agency

I. Background

A. Chemistry

1. General

Pentachlorophenol (PCP or PENTA)[1/] is a buff-colored crystal which is produced in the United States by chlorination of molten phenol in the presence of a catalyst. Derivatives of PCP which are registered for use as pesticides are the sodium and potassium salts (Na-PCP and K-PCP, respectively), and the lauric acid ester (L-PCP). The structures and physical properties of PCP and Na-PCP are given in Figure I. K-PCP is produced as in situ formulations by dissolving PCP in potassium hydroxide solutions. The physical and chemical properties of pure K-PCP are not available from standard chemical references or from EPA files. L-PCP is produced by esterification of PCP with mixtures of alkyl carboxylic acids, the most predominant of which is lauric acid. Technically pure L-PCP is a brown oil having a specific gravity of 1.2b at room temperature. It is soluble in non-polar solvents, oils, fats, waxes and plasticizers, and insoluble in water and alcohols.

Industrial production of PCP is a two-stage process. In the first stage, isomers of tri- and tetrachlorophenols are formed when the reaction temperature is about 105°C. In the second stage, the temperature is progressively increased to 130°C to keep the reaction mixture molten, and the tri- and tetrachlorophenols are further chlorinated to form PCP. This reaction is not quantitative; tetrachlorophenols persist during the reaction and are carried with PCP during subsequent processing. The result is that

1/ PCP will be used as an abbreviation for pentachlorophenol in this document.

Figure I

Physical properties of pentachlorophenol and sodium pentachlorophenate

Structural Formula		Name	Pentachlorophenol	Sodium Pentachlorophenate
Formula	C_6Cl_5OH	$C_6Cl_5ONa \cdot H_2O$

Ethanol (95%)	120	65
Methanol	180	25
Isopropanol	85	30
Ethylene glycol	11	40

technical grade PCP contains from 4 to 12% tetrachlorophenols. These tetrachlorophenols are listed on the product labels as active ingredients. One of the three possible tetrachlorophenol isomers, 2,3,4,6-tetrachlorophenol, was registered by the Dow Chemical Company as Dowicide 6, a fungicide; this chemical is no longer produced as a separate product. It is, however, listed as an active ingredient in some PCP products.

The elevated temperatures required for the second stage of PCP production favor condensation of the tri- and tetrachlorophenols to form hexa-, hepta-, and octa-chlorodibenzo-p-dioxins (dioxins) and various chlorinated dibenzofurans (furans). These impurities are also carried forward with PCP and will be discussed in greater detail in Section I.C.

2. Environmental Residues

The amount of PCP produced in the United States, approximately 50,000,000 pounds/year, and its widespread use as a pesticide strongly indicate its potential as an environmental pollutant. Possible sources of PCP in the environment are: runoff from manufacturing or wood preserving processes, leaching or vaporization from preserved wood, and from its use as a termiticide and herbicide. Although there is evidence that PCP could be found in the environment, the ambient monitoring programs for air, water, and soils do not routinely test for PCP.

a. Air

The vapor pressure of PCP, 0.00017 torr at 20°C and 0.0031 torr at 50°C, suggests that it can volatilize from treated surfaces (torr: pressure required to support 1 mm of mercury at 0°C). Gebefugi et al. (1976) measured PCP vapors in a closed test area in which wall paneling was covered according to label instructions with a wood-protecting agent containing PCP. Air samples were taken every day for 9 days at 25°C, and then for 6 days at 28°C. Samples were taken in the morning, and the sampling period was not specified. Gas chromatographic measurements showed PCP measurements ranging from 1 microgram/cubic meter (ug/m^3) on the first day to 160 ug/m^3 on the fourth day. There were wide fluctuations in PCP concentrations during the course of the experiment. In a separate experiment, an increase in the amount of water vapor in the test area decreased the PCP levels in the air.

Bevenue et al. (1972) measured PCP in rain water in Hawaii [2-284 parts per trillion (ppt)], in snow samples taken from Mauna Kai Summit (14 ppt), and in lake water fed by this snow (10 ppt). The authors did not determine whether this airborne PCP was in gaseous form or adsorbed on dust particles. Because of the heavy use of PCP in Hawaii to protect wooden surfaces against termites, both physical forms are likely to occur in the air.

There is indirect evidence that PCP vapors can be toxic. An article that appeared in California Health in 1970 (Anon. "Pentachlorophenol Poisoning in the Home") described the effects on the inhabitants of painting interior wood paneling with PCP-containing paint. House plants within the

home died in 3 or 4 days. Over a 3-month period, the housewife became progressively weaker while losing 20 pounds. She recovered after hospitalization. Her condition was diagnosed as PCP poisoning by a California State Department toxicologist.

Ferguson in 1959 showed that PCP vapors were toxic to conifer seedlings grown in greenhouses on wood flats whose sideboards had been treated with PCP. Leaching of PCP into the soils of the flats was not implicated since transfer of these soils to untreated flats supported normal seedling growth. He observed toxic effects, to a lesser extent, on seedlings in untreated flats, which he attributed to air movement from treated to the untreated flats. PCP has been found in the blood and urine of workers in wood-preserving factories; in one report this was attributed, in part, to respiratory exposure (Casarett et al., 1969).

The American Conference of Government Industrial Hygienists has established a PCP Threshold Limit Value-Time Weighted Average of 0.5 mg/m^3 for a normal 8-hour workday or 40-hour workweek, and a Threshold Limit Value-Short Term Exposure Limit of 1.5 mg/m^3 for a 15-minute period.

b. Water

PCP can be released into water as an effluent from manufacturing or wood-preserving plants, by leaching from treated wood exposed to rain, and by runoff from its uses as a herbicide, fungicide, and molluscicide. In spite of its wide production and variety of uses, PCP is not routinely monitored by the National Water Monitoring Program, which measures contaminants in rivers and streams in the United States. This program reported fifteen measurements of PCP along the California Aqueduct between 1974 and 1976. There was no sampling previous to 1974. Values reported from five sites along the Aqueduct ranged from 0.01 to 16.0 ug/liter PCP in whole water samples.

Buhler et al. (1973) measured PCP in sewage treatment plant effluent collected simultaneously from three Oregon cities. He reported PCP levels between 1 and 4 parts per billion (ppb). The same workers found PCP concentrations between 0.10 and 0.70 ppb in water sampled from the Willamette River, and 0.6 ppb in drinking water from a water treatment plant. In unpublished data, the EPA Drinking Water Program has found PCP in the water of 86 of the 108 cities sampled; the mean concentration of the positives was 0.07 ug/liter. The median concentration for all cities was 0.051 ug/liter (Kutz, 1977).

In 1976 Fountaine et al. analysed samples from a stream which originated in an area containing several manufacturing plants, including a wood-preserving installation. The highest measurement of PCP, 5,450 parts per million (ppm), was in surface oil slicks; water samples ranged from 0.082 to 10.5 ppm. The authors noted that these PCP levels are not necessarily due to discharge from the wood-preserving factory outlet into the stream. The factory had been in business for 20 years. Gross spillage of PCP occurred in the factory area, particularly in the early years of operation, and this PCP seeped into the ground. There is, therefore, the possibility that the PCP levels in the stream were due to runoff from PCP-contaminated soil, rather than direct discharge from

the factory. Measurements of PCP in the factory discharge were not reported.

c. Soils

Because the National Soils Monitoring Program does not routinely analyze soil samples for PCP, ambient levels in soils are not available.

In a series of papers, Choi and Aomine (1972, 1974a, 1974b) studied the adsorption properties of PCP on various soil types and under a variety of environmental conditions in the laboratory. They found that PCP was adsorbed to some extent on all soil types. Soil acidity was a major factor in determining the amount of PCP adsorbed; strongly acidic soils (pH 5) adsorbed more than less acid soils (pH 6). There was less adsorption by weakly acidic or neutral soils. However, increased organic matter or temperature or both increased PCP adsorption at the pH-values tested. In a series of experiments using different soil types and ion concentrations, the authors demonstrated competition between inorganic ions and PCP for adsorption sites on soil colloids. They concluded from their experiments that PCP is adsorbed on soil through ion exchange reactions as well as molecular adsorption due to van der Waals forces.

The fate of PCP in soils has been extensively studied. The primary factor in the degradation of PCP in soils is microbiological activity; other contributing factors include soil type, moisture content, and temperature. Kuwatsuka and Igarashi (1975) demonstrated a positive correlation between the proportion of organic matter and the degradation rate of PCP in soils, observing that soils devoid of organic matter did not degrade PCP. Ide et al. (1972) found that PCP did not degrade in sterilized soil samples; Young and Carroll (1951) showed that PCP decays most rapidly in soil containing a large proportion of organic matter and at temperatures which are optimal for microbiological activity. Kuwatsuka and Igarashi (1975) compared the PCP degrading characteristics of upland (i.e., aerated) soil with flooded (i.e., rice paddy) soil. They found that soil microorganisms degraded PCP most rapidly when they were maintained in the environment to which they are adapted, e.g. flooding upland soil and aerating flooded soil decreased the rate of PCP decay. Using a gas chromatograph with an electron-capture detector the authors identified tri- and tetrachlorophenols as degradation products of PCP and indicated that, at least as a first step, PCP degrades by dechlorination. Ide et al. (1972) found tri- and tetrachloroanisoles as PCP degradation products. This indicated that methylation is also involved in the degradation process.

The persistence of PCP in soils ranges between 21 days and 5 years, depending primarily on the microbial population. Watanebe (1973) reported complete degradation in paddy soil in 21 days. Hetrick (1952) claimed that PCP persisted for over 5 years in an unspecified soil type.

d. Plants and Animals

i. Plants

There are no data available on PCP residues in higher plants resulting from its use as a pesticide.

ii. Animals

In 1974 Vermeer et al. reported the death of wildlife caused by application of Na-PCP to a rice field in Surinam, South America. The Na-PCP was applied at the rate of 4 kg/hectare to control water snails which damaged young rice plants. PCP residues were measured in snails (36.8 mean wet-weight ppm), frogs (8.1 mean wet-weight ppm), fishes (31.2, 41.6 and 59.4 mean wet-weight ppm for three species), and snail kites, a bird which feeds on water snails. The dead kites showed mean PCP residues of 11.25 ± 1.11 ppm in brain tissue, 45.56 ± 2.18 ppm in liver, and 20.34 ± 1.25 ppm in the kidneys, all on a wet weight of tissue basis. These PCP levels were 53, 74, and 166 times greater, respectively, than those in kites collected from an untreated marsh. The investigators attributed the death of the kites from the treated field to their feeding on water snails containing PCP. In addition, when other bird species which frequented the treated fields were examined, PCP was detected at levels ranging from 0.04 to 0.24 wet-weight ppm in the liver and 0.08 to 0.49 wet-weight ppm in the brain.

Early in 1977 PCP was detected in the blood of dairy cattle and calves on eight Michigan farms. These herds all showed signs of sickness and had high calf mortality rates. The levels of PCP found in one herd ranged from 270 to 570 ppb. This herd was housed in a total-confinement barn which had been constructed, in part, of PCP-treated wood. In another herd the dioxins found in PCP were detected in fat and liver tissue in the parts per billion and parts per trillion ranges,

respectively. As a result of this incident, the Animal and Plant Health Inspection Service of the Department of Agriculture (USDA) instituted a nationwide survey of beef fat and liver for the presence of the hexa- and octachlorodioxins found in PCP. In the first group of 238 beef samples collected in seventeen States, 70 (29.4%) showed positive levels using low resolution mass spectrometry. Of these 70 samples, 4 had been confirmed using high resolution mass spectrometry. Detection levels were in fractional nanograms/gram for both hexa- and octa-chlorodibenzo-p-dioxins. The determination of the signficance of these residues awaits the completion of the survey and its subsequent statistical and methodological analysis.

e. Humans

PCP appears to be ubiquitous in human urine. In 1970 Cranmer and Freal found PCP in urine at concentrations ranging from 2 to 11 ppb in the general population. In 1967 Bevenue et al. found PCP in the urine of 130 Hawaiians occupationally exposed to PCP at levels ranging from 0.03 to 35.7 mg/liter. In the same study, PCP was found in the urine of all but one of 117 unexposed subjects; these values varied from 0 to 0.44 mg/liter. In a recent study, preliminary data from a joint U.S. Public Health Service - EPA effort disclosed that 86% of the urine samples taken from subjects within the continental United States showed positive PCP values averaging 6.3 ppb, with a maximum observed value of 193 ppb. The limit of detection was 5 ppb (Kutz et al., 1978).

Arsenault (1976) reported the mean blood serum level of PCP in twenty-one workers in pressure treatment plants to be 1.05 ppm; there

were about 0.1 ppm in the controls (unspecified). Data for the general population are not available. In another study Shafick (1973) reported PCP levels ranging from 12 to 52 ppb in the adipose tissue of eighteen subjects who were not occupationally exposed to PCP. Dougherty and Piotrowska (1976) detected PCP in seminal fluid from seven sexually active men. Levels detected averaged 50 ppb (range: 20-70 ppb).

The sources and exposure routes of PCP residues in human tissues have not been conclusively established. Possible routes are inhalation of vaporized PCP and ingestion of PCP in water and food. In addition, PCP forms as a metabolic product of hexachlorobenzene (HCB). Lui and Sweeney (1975) fed rats 0.25% HCB, which amounted to about 50 to 100 mg HCB daily. Analysis of urine by gas-liquid chromatography showed a level of 12.5 ug/ml PCP in a daily urine output of about 15 ml. The analyses were confirmed by gas-liquid chromatography/mass spectrometry.

The Food and Drug Administration Market Basket Survey has estimated the amount of pesticides in foodstuffs since 1965. The estimates are based on the average daily intake of an 18-year-old male, whose food consumption is the highest of any age group of either sex. The most recent data from this survey (Johnson and Manske, 1977) are available from food samples collected from August 1974 to July 1975. PCP was assayed in twelve food commodities collected in twenty cities in the United States, so that there were twenty measurements for each commodity. The results are summarized in Table 1.

TABLE 1. Pentachlorophenol in food commodities [1/]

Commodity	Average, ppm [2/]	Positive Composites	Range, ppm

1/ Data from Johnson and Manske (1977).
2/ Averages based on twenty composite samples; trace residues were not included in calculating the average.
3/ T = trace.

These low levels of PCP in food are a constant means of exposure to humans. However, the connection between this route of exposure and the presence of PCP in blood, urine, and adipose tissue is not clear.

B. Metabolism

1. Plants

As described earlier, microorganisms are capable of degrading PCP in soils. Certain bacterial strains have been isolated which are capable of growing on media containing PCP (Morton et al., 1969) and of using PCP as the sole source of carbon (Chu and Kirsch, 1972). The metabolic mechanisms of bacterial action on PCP are, however, unknown. Certain species of fungi, some of which are present in wood, have been found to tolerate PCP. Several of these fungi depleted PCP in treated wood blocks, but lost their ability to cause wood decay (Duncan and Deverall, 1964). As is the case with bacteria, metabolic pathways of PCP degradation by fungi have not been identified. There are no data available on the metabolism of PCP by higher plants.

2. Animals

There have been two studies on PCP metabolism in aquatic animals. Each of these papers demonstrated the same metabolic pathway. In 1970 Kobayashi et al. repurted that the short-necked clam (Tapes phillippinarium) converts PCP to pentachlorophenyl sulfate in sea water. The level of PCP in the shellfish reached a plateau after about 24 hours of exposure. After 50 hours, 80% of the PCP had been converted to the sulfate conjugate. The same detoxification mechanism was demonstrated by Akitake and Kobayashi

(1975) in goldfish cultured in fresh water containing PCP. Whether this detoxification mechanism is common to other aquatic animals is not known.

Mammals are known to excrete PCP in unchanged form after exposure by various routes. In 1974 Ahlborg et al. administered ^{14}C-PCP orally and intraperitoneally to rats and mice (10 to 25 mg/kg). Approximately 40% was excreted as PCP in the urine. ^{14}C-tetrachlorohydroquinone was also detected at levels equal to 5% of the excreted radioactivity in rats, and 24% of the activity in mice. The authors also found PCP and tetrachlorohydroquinone in the urine of workers occupationally exposed to PCP. Larsen et al. (1972) orally administered ^{14}C-PCP to rats, and found that 50% of the radioactivity was excreted in the urine in 24 hours, 68% was excreted in 10 days; between 9.2 and 13.2% was excreted in the feces. Tissue analyses 40 hours after exposure showed small amounts of ^{14}C activity in the adrenal glands, blood, brain, fat, heart, kidneys, liver, lungs, muscles, ovaries, spleen, stomach and intestine, and testes. Highest levels were found in liver (0.23% of administered radioactivity), kidney (0.18%), and blood (0.15%). In blood, 90% of the radioactivity detected was in the serum.

Larsen et al. (1972) postulated a two-component urinary excretion pattern that has a 10-hour half-life for the first 2 days, followed by a 102-day half-life. In 1969 Casarett et al. measured PCP concentrations in the urine of two subjects after respiratory exposure and determined that after 24 hours, the half-life is approximately 10 hours. They found a blood-to-urine PCP ratio of between 1.5 and 2.5 in occupationally ex-

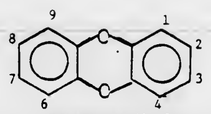
posed individuals. At about 10 ppm, PCP in blood plasma reached a plateau while urine levels continued to increase. They postulated that PCP binds to plasma protein, and is subsequently distributed to the tissues. The work of Larsen et al. (1972) seems to confirm this.

Tashiro et al. (1970) demonstrated an additional metabolic pathway for PCP. They collected and analysed the urine of three rabbits fed 10 g of unlabeled PCP over 30 days. They identified a sugar conjugate of PCP, pentachlorophenyl-beta-glucuronide, in the urine which led them to propose a three-way excretory pathway for PCP in mammals: unchanged PCP; the oxidation product "chloranil", which is actually tetrachloroquinone, and the conjugate PCP-beta-glucuronide.

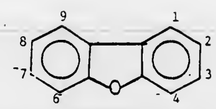
C. Pentachlorophenol Contaminants

As stated previously, commercial production of PCP results in the formation of dioxin and furan contaminants. Figure 2 shows the structural formula of the basic molecules. Substitution of chlorine atoms at one or more of the numbered positions results in the chlorinated dibenzo-p-dioxin (dioxin) and chlorinated dibenzofuran (furan) chemical families. There are 75 members of the dioxin family and 135 furans. Members of these families differ not only in the number of chlorine atoms on the molecule, but also in the positioning of these atoms (isomerism). Thus the dioxin that has six chlorine atoms on its molecule has ten possible isomers.

The dioxins which are found in PCP are the hexa- (HCDD), hepta- (HeCDD), and octa-chlorodibenzo-p-dioxins (OCDD); the furans found are



Dibenzo-p-dioxin



Dibenzofuran

FIGURE 2. Structure of dioxin and furan

the tetra-, penta-, hexa-, hepta-, and octa-dibenzofurans (Buser and Bosshardt, 1976). The amount of these chemicals in PCP varies with each industrial batch produced, even when produced by the same manufacturer. Analytical methods for measuring individual isomers require sophisticated and expensive analytical instrumentation, and standards for the isomers are not generally available. Until recently, both the dioxins and furans in PCP have been measured as isomeric groups. Table 2 shows the composition of typical commercial PCP.

The physical, chemical, and toxicological properties of individual dioxins and furans are, with one exception, relatively unknown. The exception is 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD), which has been shown to be one of the most toxic compounds known. TCDD is not found in PCP at a limit of detection less than 0.05 ppm (Johnson et al., 1973). However, the dioxins in PCP have been shown by Johnson et al.

TABLE 2. Composition of commercial pentachlorophenol [1/]

Component	Dowicide 7	Dowicide EC-7 [2/]
Pentachlorophenol	88.4%	89.8%
Tetrachlorophenol	4.4%	10.2%

(1973) to cause chloracne in rabbits and edema in chicks. The only data available comparing the toxic effects of individual dioxin isomers were reported by McConnel et al. (1977), and these are shown in Table 3. These data indicate that the hexa- and hepta-dioxin isomers tested were less toxic than TCDD in mice and guinea pigs; however, they would be classified as Category I poisons (oral LD-50 less than 50 mg/kg).

TABLE 3. Single oral LD-50-30 of dioxin isomers [1/]

Isomer	LD-50-30, ug/kg

Firestone (1977) detected PCP, individual hexa- and hepta-dioxin isomers, and octa-dioxin in samples of commercial gelatin procurred from supermarkets and in bulk. Gelatin is produced from pork skins and cattle

(1974)

bones and hides, which may be preserved with PCP during processing both in this country and abroad. According to Firestone, the annual consumption of gelatin in the United States is 57 million pounds of domestic production and 13 million pounds of imports.

Highest levels of PCP and total dioxins were found in bulk gelatin that was imported from Mexico and produced by a single company. Three measurements of this gelatin averaged 6.4 ppm of PCP, and six measurements averaged 26.8 ppb of total dioxins. In contrast, bulk domestic porkskin gelatin had no PCP and 0.1 ppb of total dioxins (octadioxins) in one of two sample measurements. Three consumer packages of unflavored gelatin purchased in a supermarket showed 0.2, 0.8, and 3.6 ppb of total dioxins.

D. Registered Uses and Production

Pentachlorophenol and its derivatives are among the most versatile pesticides now in use in the United States. This versatility is due first to their efficacy against a wide variety of pests (bacteria, yeast, slime molds, algae, fungi, plants, insects, snails), and second to their solubility in both organic solvents and water. Thus, PCP can be applied to a wide spectrum of materials. In various concentrations, solvents, and formulations, pentachlorophenols are registered for use on beans (for replanting purposes only), wood, leather, burlap, masonry, cordage, paints, petroleum, pulp and paper mill systems, weeds on seed crops (preharvest desiccant), secondary oil recovery injection waters, and commercial and industrial water cooling towers and evaporation condensers (Na-PCP).

Approximately 50,000,000 pounds of PCP is produced annually in the United States. The major use of PCP in the United States is as a wood preservative. This use consumes approximately 80% of all PCP produced. About 11% of the PCP produced is formulated as Na-PCP and used in the production of pressed and insulation board, and in cooling towers. Approximately 6% is used in pulp and paper mills to control the growth of slime-forming bacteria and fungi in paper production; 3% is used for farm treatment of fence posts, home protection against termites, and as a herbicide and pre-harvest desiccant.

The number of Federally-registered products containing PCP and the number of registrants is given in Table 4. In addition, there are 75 State-registered products formulated by 60 registrants.

TABLE 4. Federal registration of pentachlorophenol [1/]

E. Regulatory History

Technical PCP was registered for use as a wood preservative in 194d by Dow Chemical Company and Monsanto Agricultural Products Company. Subsequently, registrations were granted for a wide variety of uses, including agricultural uses such as pre- or postharvest weed treatment and preharvest dessication of seed crops. Until 1970, regulatory actions against PCP were confined to these kinds of uaes. For example, in the "USDA Summary of Registered Agricultural Pesticide Uses" issued on August 31, 1968, PCP was registered as a weed killer on alfalfa, cotton, pineapples, and sugarcane. These registrations were cancelled by Pesticide Regulation (PR) Notices 69-4 (February 1, 1969) and 70-4 (February 26, 1970) when the concept of zero tolerance was abandoned by the Department of Agriculture. Currently, PCP is registered for agricultural use only as a seed treatment for nonfood uses on beans, alfalfa, clover, lespedeza, and vetch.

On September 28, 1970, USDA published PR Notice 70-22. Although PCP was not mentioned by name, the Notice stated "Appropriate regulatory action will be taken under the provisions of the Act (FIFRA) if these chlorodioxins are found in any economic poison." The notice was directed toward the presence of 2,3,7,8-tetrachlorodibenzo-p-dioxin (TCDD) in the herbicides 2,4,5-trichlorophenoxyacetic acid and silvex; PCP and its chlorodioxins were not mentioned. The Dow Chemical Company, however, interpreted the Notice to apply to PCP and took action to reduce chlorodioxin levels in its technical PCP.

At the time the Notice was issued, methodologies for the analysis of dioxins in PCP were not totally reliable. Therefore, there was disagreement within the industry on the actual levels of dioxins in their products. There were no toxicological studies on PCP dioxins, and toxic effects were inferred from chloracne and chick edema effects of commercial PCP. These same effects are caused by TCDD. In the absence of such evidence, regulatory action on dioxin levels in PCP was not possible. This situation continued until 1974, when research involving purified PCP (i.e., relatively free of dioxins), in contrast to commercial PCP, began to appear in the literature.

II. Summary of Scientific Evidence Relating to Rebuttable Presumption Criteria

A. Reproductive and Fetotoxic Effects in Mammalian Species

40 CFR 162.11(a)(3)(ii)(B) provides that "a rebuttable presumption shall arise if a pesticide's ingredient(s)... Produces any other chronic or delayed toxic effect in test animals at any dosage up to a level, as determined by the Administrator, which is substantially higher than that to which humans can reasonably be anticipated to be exposed, taking into account ample margins of safety." This section reflects concern that chronic exposure to chemicals may result in injury to the reproductive system and/or the fetus and provides that a rebuttable presumption shall arise if chronic chemical exposure in test animals produces such results, and if human exposure to the chemicals exceed an ample margin of safety.

In the studies summarized below, fetotoxic and teratogenic effects have been reported in rats exposed to purified and commercial grade PCP. These same effects were observed in rats exposed to a mixture of two unspecified isomers of HCDD. Specifically, exposure to PCP and these HCDD isomers resulted in statistically significant increases in the incidence of skeletal and soft tissue anomalies, growth-retarded fetuses and of embryonic resorption in the litters of treated dams.

1. Fetotoxicity

a. Studies with PCP

Schwetz et al. (1974) studied the effects of purified and commercial grade PCP on rat embryonal and fetal development. The compositions of the two types of PCP are given in Table 5. Dosages of 5, 15, 30, and 50 mg/kg/day of both PCP types were administered by gavage on gestation days 6 through 15 inclusive. Their results, shown in Table 6, may be summarized as follows: both purified and commercial PCP caused statistically significant increases in fetal resorptions at the two higher doses, as well as among litters exposed to 15 mg/kg/day of commercial PCP. Specifically, the resorption rate ranged from 27.2% (64/235) to 100% (229/229) in the two highest (commercial and purified) dose groups, compared to 4.2% (15/358) in the control group. At 30 and 50 mg/kg/day, purified PCP had a more pronounced effect than commercial PCP. For example, at 50 mg/kg/day, purified PCP caused 100% fetal resorbtion, while commercial

PCP caused 58% resorption. At 30 (purified) and 50 (commercial) mg/kg/day, there were statistically significant differences in the sex ratio of surviving fetuses; males were heavily predominant. Schwetz et al. found that administration of PCP during early organogenesis (days 8 through 11 of gestation) had more pronounced effects on fetal resorption than did its administration during late organogenesis (days 12 through 15) (Table 7).

The no-effect dose for fetal resorptions was 5.8 commercial grade PCP/kg/day and 15 mg purified PCP/kg/day. Measurements were also taken on fetal body weight and crown-rump length, both of which decreased with the increase in dosage. The no-effect dose for these parameters was 15 mg commercial grade or purified PCP/kg/day.

Larsen et al. (1975) fed 60 mg ^{14}C-PCP/kg body weight to pregnant Charles River CD strain rats on day 15 of gestation. They detected negligible amounts of ^{14}C-PCP in the placentas and fetuses up to 32 hours after dosage. This indicated that the amount of PCP that passes through the placental barrier on day 15 is negligible. In a separate experiment that used unlabeled PCP and was reported in the same paper, single oral doses of 60 mg/kg administered to separate groups of animals on days 8, 9, 10, 11, 12, or 13 of gestation had no statistically significant effect on the rate of resorption of the test animals as compared to controls. However, statistically significant reductions in fetal weight were reported in days 9 and 10.

Hinkle (1973) reported on the fetotoxic effects of PCP in the Golden Syrian hamster. After doses of 1.25, 2.5, 5, 10, and 20 mg/kg were administered by gavage on days 6 through 10 of gestation, he reported no differences between control and test animals in these parameters: maternal body weight, fetal weight, litter size, and number of resorptions. Increased toxicity was noted at the two highest doses, but these increases were "minimal in number." The author stated that PCP was found in detectable amounts (unspecified) in the untreated animals as well as in their diet.

Fahrig (1978), in a study to be described in more detail in Section III. B., observed decreases in litter size after injection of 50 and 100 mgms PCP/kg body weight into the peritoneal cavity of pregnant mice at day ten of gestation. Control mice, on the average, produced 6.4 fetuses/dam. Litter size was reduced at the 50 mg/kg dose to 3.67 fetuses/dam, and to 3.92 fetuses/dam at the 100 mg/kg dose. PCP was administered in a 10% solution of dimethylformamide; a vehicle control was not reported. Litter size calculations included dams that had no litters.

The Schwetz et al. study cited earlier establishes that ingestion of PCP by pregnant rats during organogenesis produces lethal and toxic effects such as fetal resorption and reduced body size. Comparable effects were not observed when larger but single doses were administered to rats during organogenesis (Larsen, 1975), nor when single doses were administered to hamsters (Hinkle, 1973).

b. Studies with Dioxins

Schwetz et al. (1973) administered purified hexachloro-p-dibenzo-dioxins (HCDD) (two unspecified isomers) and octachloro-p-dioxin (OCDD) by gavage to pregnant Sprague-Dawley rats on days 6 through 15 of gestation. Doses were 0.1, 1, 10, or 100 ug/kg/day HCDD and 100 or 500 mg/kg/day OCDD.

The results of these studies are shown in Table 8. For HCDD, there were statistically significant increases over controls in fetal resorptions at the 10 and 100 mg/kg/day doses, as well as decreases in fetal body weight and fetal crown-rump length. In contrast, OCDD at both dose levels (100 and 500 mg/kg/day) produced no fetal resorptions or other effects except for an increase in the incidence of subcutaneous edema at the high dose level.

The HCDD used in this experiment was reported by the authors to have a purity in excess of 99%, and to consist of two isomers in the ratio 89:11. The presence of HCDD in PCP and the low HCDD doses producing fetotoxic effects in pregnant rats strongly suggests that exposure to HCDD via exposure to PCP can cause chronic effects as defined in 40 CFR 162.11(a)(3)(ii)(B).

2. Teratology

a. Studies with PCP

Schwetz et al. (1974a) also investigated the teratogenic effects of PCP on rats. In this study they observed fetal anomalies produced by oral administration (gavage) of 5.8, 15, 34.7, and 50 mg/kg/day of commercial grade PCP, and 5, 15, and 30 mg/kg/day of purified PCP. In one experiment, they administered these amounts of PCP during days 6 through

Table 11 summarizes the results of treatment with HCDD.

3. Exposure Analysis

In order to determine whether a presumption should be issued based on reproductive and fetotoxic effects, pursuant to Section 162.11(a)(3)(ii)(B), the Agency must determine whether or not an ample margin of safety exists between the levels of PCP which produce reproductive and fetotoxic effects, and the level(s) to which the population at risk (women of child-bearing age) can reasonably be anticipated to be exposed.

This section presents estimates of dietary, inhalation and dermal exposure to PCP and HCDD on a "worst case" basis. These estimates are based on the exposure of a pregnant woman in the home and at work at major PCP and Na-PCP use work sites, i.e., wood preserving plants, cooling towers, tanneries, and construction sites. This approach to PCP exposure analysis is taken because of the fetotoxic and teratogenic effects of PCP described in Section II.A.1 and II.A.2 and because of the continued movement of women into all areas of the labor force. Estimates are computed on the basis of 60 kg pregnant woman, 100% absorption via dietary and inhalation exposure, and 10% adsorption via dermal contact for both PCP and Na-PCP. There is no data available on dermal absorption of PCP by pregnant women; the 10% estimate is based on the penetration value of 7-15% of several chlorinated hydrocarbons, reported by Maibach and Feldman (1974). A normal breathing rate is defined as 1.8 m^3/hour at work, and 1.0 m^3/hour in the home.

Inhalation of water vapor containing Na-PCP is an exposure route for workers in industrial cooling towers, paper pulp mills and tanneries. Appendix I shows the calculations used to derive estimates of PCP in water vapors at these sites.

15 of gestation; statistically significant increases in skeletal defects of the ribs, sternebrae and vertebrae were observed in both treatment groups (Table 9). In a second experiment, they gave 30.0 (purified) and 34.7 (commercial grade) mg/kg/day PCP on days 8 through 11 of gestation to one group of animals, and on days 12 through 15 to a second group; statistically significant increases in abnormal sternebrae and skulls were observed in animals treated with purified PCP and abnormal sternebrae in animals treated with commercial PCP (Table 10).

These results establish that the higher doses of PCP produce fetal anomalies in the rat. At the 30 mg/kg/day dose the effects of purified PCP were more pronounced than those of the equivalent of commercial grade PCP.

b. Studies with Dioxins

In the 1973 paper cited above, Schwetz et al. reported teratogenic effects from the dioxins found in PCP. They administered doses of 0.1, 1, 10, and 100 ug HCDD/kg/day to pregnant Sprague-Dawley rats on days 6 through 15 of gestation. They found statistically significant increases over the controls in all of the teratogenic parameters observed at 100 ug/kg. For example, cleft palate was observed in 47% (8/17) of the fetuses exposed to HCDD, compared to none (0/156) in the controls; 12% (2/17) of the treated fetuses had dilated renal pelvis compared to 0.6% (1/156) in the controls; and 31% (5/16) of the treated fetuses had abnormal vertebrae compared to 6% (9/158) in the controls. Subcutaneous edema was observed at all doses except 0.1 ug/kg/day, which was considered the no-effect dose. In contrast, OCDD did not cause teratogenicity at 100 mg/kg/day; doses of 500 mg/kg/day caused subcutaneous edema, but no other effects.

Exposure to HCDD is developed using the same bases as for PCP. In addition these assumptions are made: that the HCDD content of most technical PCP and Na-PCP in the market place is 4 ppm (Table 2) and that assimilation of HCDD is identical to that of PCP and Na-PCP. Using these assumptions, exposure to HCDD is equal to the exposure to PCP times the factor 4×10^{-6} (4 ppm).

a. Dietary Exposure

Although PCP has no registered uses on any food commodity, PCP residues have been measured in foodstuffs (Table 1), and therefore there is exposure to PCP in the diet. Using the data in Table 1 and the average daily intake of the commodities which have been found to contain PCP, it is possible to obtain an estimate of PCP exposure from foodstuffs. Table 12 displays these results, computed for average and maximum PCP intake per day. For a 60 kg pregnant woman, the intake would be:

0.0015 mg/day/60 = 0.025 ug/kg/day average,

or 0.0181 mg/kg/day/60 = 0.302 ug/kg/day maximum.

For HCDD, intake would be:

0.1×10^{-6} ug/kg/day average, or 1.21×10^{-6} ug/kg/day maximum.

b. Dermal Exposure

i. Homeowners

PCP is sold in retail stores for treatment of wood to prevent rot and decay in boats, masonry, fences, and other sites. Common directions call for two coats of 5% PCP in mineral oil or a 3 to 30 minute soak. Assuming that a 60 kg applicator spills enough of the solution to cover one hand (10 ml or about 10 grams), the exposure would be:

(10 gm x 0.05 x 0.1)/60 = 0.833 mg/kg/day.

For HCDD, exposure would be 3.33×10^{-6} mg/kg/day.

TABLE 11. Effect of treatment with hexachlorodibenzo-p-dioxin on the incidence of fetal anomalies [1]

1 From Agricultural Handbook No. 62, August 1961, p. 42

2 From Table 1 (Johnson and Manske, 1977)

ii. Construction Workers

PCP-treated wood is used to construct platforms, fences, porches, and other structures. It is estimated that 6 months after treatment, PCP will be present on the wood surface at about 0.5 mg/ square foot (Koppers Chemical Company, 1978). Dermal exposure occurs if workers handle wood without wearing gloves. Assuming that the worker actually handles wood 40 times during an 8-hour period, and that the area of the hands averages 0.25 sq. ft., then exposure would be:

(40 x 0.5 mg/sq.ft. x 0.25 sq.ft./operation x 0.1)/60 = 8.3 ug/kg/day.

For HCDD, exposure would be 33.2×10^{-6} ug/kg/day.

iii. Cooling Tower Workers

Na-PCP is used to control the growth of algae, bacteria and fungi in water cooling systems. Formulations typically contain 80% Na-PCP, and are added to the system at concentrations of 60 ppm for initial cleaning, then reduced to 30 ppm to maintain control. A worker could be exposed dermally to 100 ml of cooling water containing 80% x 60 ppm formulation, or 48 ppm (48 mg/liter), of Na-PCP. (Shamaiengar, 1978). Exposure would then be:

(48 mg/l x 0.1 liter x 0.1)/60 kg = 0.008 mg/kg/day.

During routine maintenance, this would drop to 0.004 mg Na-PCP/kg/day. For HCDD, exposure would be 0.032×10^{-6} mg/kg/day for initial cleaning, and 0.016×10^{-6} mg/kg/day during routine maintenance.

iv. Paper/Pulp Mill Workers

To control slime, algae and bacteria, Na-PCP is added to the paper-pulp slurry during the manufacturing process. A typical product contains 45% active ingredients of which 25% is Na-PCP. The concentration of the product used is 450 ppm, of which 113 ppm (113 mg/l) is Na-PCP.

During the process, samples of pulp slurry are taken periodically. If a worker takes samples hourly (8 times/day) and wets one hand with 10 ml of the slurry (International Paper Company, 1978), the exposure would be:

(8 x 0.01 liter x 113 mg/l x 0.1)/60 kg =

0.015 mg PCP/kg/day

For HCDD, exposure would be 0.060×10^{-6} mg/kg/day.

v. Tannery Workers

A typical product used to control growth of slime and fungi contains 12.9% PCP. With a use concentration of 1:4,000, the solution would contain 1 gm/4,000 gm water or 250 ppm of product. If a worker were exposed during normal operations, she could dermally receive about 1400 ml of solution daily on her exposed arms and neck (Shamaiengar, 1978). Exposure here would be:

(1.4 liter x 250 mg/l x 0.129 x 0.1)/60 kg =

0.075 mg Na-PCP/kg/day

For HCDD, exposure would be 0.3×10^{-6} mg/kg/day.

vi. Workers in Pressure-Treatment Plants

Although data is not available on dermal exposure at these sites, it can be assumed that this exposure is at least equal to exposure at construction sites. Freshly treated wood can be expected to contain more PCP on its surface than wood used at construction sites, the latter having been subjected to weathering, i.e., leaching, vaporization, etc., in the interval between pressure treatment at the plant and use at construction sites. Therefore, dermal exposure at pressure treatment plants is taken to be at least the same as that at construction sites.

c. Inhalation Exposure

i. In the Home

The only data available on the vaporization of PCP from treated wood in an enclosed area is provided by Gebefugl et al. (1976). They found as much as 160 ug PCP/m^3 in the air of a test area treated, according to the label instructions, with paint containing PCP. The concentration of PCP in the paint was not reported.

Using 160 ug PCP/m^3 as a worst case, and assuming that a 60 kg pregnant woman resides in her home an average of 20 hours per day breathing at a rate of 1.0 m^3/hr, the exposure would be (160 ug PCP/m^3 x 1.0 m^3/hr x 20 hr)/60 = 53.3 ug PCP per day.

For HCDD, exposure would be 213.3×10^{-6} ug/kg/day.

ii. Pressure-Treatment Plants and Construction Sites

In February, 1976, the Center for Disease Control, National Institute for Occupational Safety and Health, conducted an environmental survey of a pressure treatment wood preserving plant in Little Rock, Arkansas. This survey included air sampling for PCP at various sites in the plant area. Table 13 shows the results of the analyses of these samples.

The highest value reported, 8 ug/m^3, was in an area where about twice each month 200-250 fifty (50) pound bags of solid PCP were manually opened and dissolved in heated fuel oil. Assuming that, as a worst case, this level of airborne PCP is continuously present throughout the plant,

** mg/M^3 = milligrams of substance per cubic meter of air sampled

1/ Source: Health Hazard Evaluation Determination Report No1. 75-117-371, DHEW, Center for Disease Control, National Institute for Occupational Safety and Health, Cincinnati, Ohio. March, 1977.

the daily exposure of a 60 kg worker at a moderate breathing rate ($1.8\ m^3/hr$) would be:

$$(8\ ug/m^3 \times 1.8\ m^3/hr \times 8\ hours)/60 = 1.92\ ug/kg/day.$$

For HCDD, exposure would be 7.68×10^{-6} ug/kg/day.

In the absence of data on PCP concentrations in the air at construction sites, these values for PCP and HCDD are taken as worst case estimates at these sites.

iii. Cooling Towers

Some persons working near cooling towers can be exposed by inhalation of vapors and drift containing Na- PCP. The relative amounts of Na-PCP and water evaporating from the cooling water is a function of their molecular weights and vapor pressures, and is estimated to be 0.02 ug PCP/m^3 (Appendix 1). Exposure therefore would be:

$$(0.02\ ug/m^3 \times 1.8\ m^3/hr \times 8\ hr)/60 = 0.004\ ug\ Na\text{-}PCP/kg/day.$$

For HCDD, exposure would be 0.016×10^{-6} ug Na-PCP/kg/day.

Drift is the entrained water carried from the tower by the exhaust air. In an average cooling tower, approximately 1% of the cooling fluid is lost to drift. For a properly functioning cooling tower, the ratio of water to air weight should be unity in order to insure maximum heat exchange. At an average cooling rate of 300 gallons/minute, this weight of water is equivalent to the weight of 880 m^3 of air. The drift (3 gallons or 11.355 liters), distributed in this volume of air, gives an Na-PCP concentration of:

$$(11.355\ l \times 48\ mg/l)/880\ m^3 = 0.6\ mg\ Na\text{-}PCP/m^3.$$

Exposure would then be:

$$(0.6\ mg/m^3 \times 1.8\ m^3/hr \times 8\ hrs)/60 = 0.15\ mg\ Na\text{-}PCP/kg/day$$

For HCDD, exposure would be 0.60×10^{-6} mg/kg/day.

iv. Paper/Pulp Mills

Inhalation exposure is based on a concentration of 0.047 ug Na-PCP/m^3 (see Appendix 1), which computes to:

$$(0.047\ ug/m^3 \times 1.8\ m^3/hr \times 8\ hrs)/60 = 0.01\ ug\ Na\text{-}PCP/kg/day.$$

For HCDD, exposure would be 0.04×10^{-6} ug/kg/day.

v. Tanneries

Inhalation exposure is based on a concentration of 0.013 ug/m^3 (see Appendix 1) so that exposure is:

$$(0.013\ ug/m^3 \times 1.8\ m^3/hr \times 8\ hrs)/60\ kg = 0.003\ ug\ Na\text{-}PCP/kg/day$$

For HCDD, exposure would be 0.012×10^{-6} ug/kg/day.

4. Conclusions

Table 14 summarizes the exposure estimates for PCP and HCDD developed in Section II.A.3. Table 15 gives the ratios of the no effect dose level to total exposure to PCP and HCDD of the major use sites.

The foregoing discussion establishes that PCP and possibly its HCDD contaminants cause teratogenic and fetotoxic effects in test animals. The adverse effects observed among the injured fetuses include distorted sex ratios, increased incidences of resorbed embryos, skeletal anomalies and subcutaneous edema. The no-effect levels are 5.8 mg/kg/day for PCP and 1 ug/kg/day for HCDD. In addition, PCP contains other dioxin contaminants which have not been fully characterized toxicologically, and which vary quantitatively from batch to batch.

Data available to the Agency indicate that the physical and chemical properties of PCP, and its commercial uses and distributions lead to substantial human and environmental exposure to this pesticide. In this regard, several factors are significant:

- Current PCP production approximates 50,000,000 pounds per year and production is expected to increase to 80,000,000 pounds per year in the near future (Josephson, 1977). If PCP is equally distributed among the total U.S. population, assuming 60 kg body weight for each individual exposed, the theoretical exposure potential for each person in the general population is 5 mg/kg/day.

- Although PCP is registered mainly for non-agricultural uses, the chemical is widely distributed in the environment and in human tissues. It is present in the blood and urine of persons not known to be exposed to the pesticide. It has been found in the drinking water of 80% of 108 cities sampled, in rainwater in Hawaii, and at low levels in food commodities such as sugars, root vegetables, and grain and cereal products (Table 1).

- PCP is registered for home and industrial uses. As a result, homeowners, workers using PCP in leather, wood, and paper processing plants, and others using products containing PCP are exposed to the chemical. The Agency estimates that use exposure levels range from approximately 0.9 mg/kg/day for home uses to less than 0.01 mg/kg/day at construction sites (Table 14).

- Homes, tanneries, wood pressure treatment plants, paper pulp mills, and cooling towers are major use sites presenting significant exposure potential, particularly since PCP has been shown to be absorbed through the skin. These uses may involve dermal as well as inhalation contact with the pesticide. Further, since 80% of the annual PCP production is used for wood preservatives, substantial numbers of people who spray, dip, and pressure-treat wood at plants may be exposed to the pesticide. In addition, workers using PCP-treated wood at construction sites can be exposed.

The Agency's pre-RPAR review of pesticide exposure is based on data about the chemical under review, other pesticides, general assumptions, and other relevant information. The Agency recognizes that the exposure data available is sketchy and incomplete. The Agency supplemented this data with reasonable worst case assumptions, which by

Table 15. Ratio of No Effect Dose [1] to Total Exposure Estimates [2] for PCP and HCDD

Site	PCP	HCDD
Home	6.55	282
Construction Sites	557	24073

Pressure Treatment Plants	557	24073

1) No Effect Doses are 5.8 mg/ug/day for PCP and 1 ug/kg/day for HCDD.

2) Averages of Total Exposures from Table 14.

their nature are conservative. Nevertheless, uncertainty remains as to the validity of the preliminary exposure estimates derived from the data and the assumptions. Therefore, in determining whether an adequate margin of safety exists, the Agency considers it prudent public policy to utilize greater safety factors for PCP than it would in situations where it had greater confidence in the underlying exposure data and assumptions.

40 CFR 162.11(a)(3)(ii)(B) provides that a rebuttable presumption shall arise if a pesticide produces any "chronic or delayed toxic effect in test animals at any dosage up to a level. . . which is substantially higher than that to which humans can reasonably be anticipated to be

exposed, taking into account ample margins of safety . . . ." PCP produces teratogenic and fetotoxic effects in test animals, and workers using PCP in connection with tannery, home, pressure treatment, paper pulp processing, cooling tower and all other uses may be exposed to PCP, with levels at major use sites ranging from 0.01 to 0.9 mg/kg/day. The Agency has concluded that the difference between these human exposure levels and the no-effect level in test animals may not constitute an ample margin of safety. Accordingly, the Agency has concluded that all PCP registrations exceed this risk criterion.

The Agency invites registrants to provide data and information to confirm, refine, or rebut the information upon which the exposure estimates are based. The Agency will use the new data to determine whether or not the presumption has been rebutted and in assessing the risks which PCP uses may present to health and the environment.

III. Studies Relating to Possible Adverse Effects

This section describes studies on PCP which do not meet the criteria outlined in 40 CFR Section 162.11. It is intended to provide information on other toxic effects of PCP, including those resulting from misuse. With the exception of the discussion of oncogenicity and mutagenicity, the studies presented were chosen as examples of these effects; other reports are available in the scientific literature.

A. Oncogenic Effects in Test Animals

In 1969, Innes et al. administered PCP (Dowicide 7) by gavage to mice at doses of 46.4 mg/kg on days 7-28 of age and at 130 ppm (17 mg/kg/day) in the diet for the following 17 months. They reported that this regime caused no significant increase in tumor incidence in test animals as compared to the control animals. In 1976 Schwetz et al. in an

unpublished study submitted to EPA, reported that dietary regimes of Dowicide EC-7 at 1, 3, 10, and 30 mg/kg/day for 22 and 24 months for male and female rats, respectively, did not increase tumor incidence over control animals. The composition of the PCP products used in these studies was similar to those shown in Table 2.

Boutwell and Boach (1959) tested a series of phenolic chemicals for their ability to induce skin tumors in mice. In these experiments a simple application of 0.3% dimethylbenzanthracene (DMBA) in benzene was first applied to shaved back skin as an initiator. Subsequently, 20% PCP, the promoter, was applied in benzene to the back skin of each test animal twice weekly for 15 weeks. In this short-term study the investigators reported a survival rate of 82.9% (29/35) in the test animals and a rate of 75% (15/20) in control animals treated with benzene only after the initial exposure to DMBA. The average number of papillomas per survivor in the test group was 0.04, slightly less than the 0.07 observed in the controls; the percent of survivors with papillomas was 4.0% as compared to 7% in the control group.

These papers have been reviewed by the EPA Carcinogen Assessment Group and were found to be negative with respect to oncogenic effects of PCP (Albert, 1978).

B. Mutagenic Effects

Fahrig (1974) induced mitotic gene conversion at the ade 8 and trp 5 loci of Saccharomyces cerevisiae. Using a concentration of 0.19 millimoles (50 ppm) PCP in 1% dimethyl sulfoxide for 6 hours, he found 6.62 ade 2 convertants per 10^5 survivors

Intragen. Rec.				5.64 ± 0.45 (609)		2.93 ± 0.10 (542)	< 0.001

1. Adapted from Fahrig et al. (1977)
2. Control Survival = 100%
3. Mutants, Convertants (Intragenic Recombination)/10^7 survivors, Recombinants (Intergenic Recombination)/10^2 survivors

The numbers in parenthesis give the actual numbers of colonies counted.

(control: 0.45 per 10^5 survivors) and 4.31 trp 5 convertants per 10^5 survivors (control: 0.36 per 10^5 survivors). Fahrig did not report on the statistical reliability of these data.

In a later report, Fahrig (1978) studied the mutagenic properties of certain chlorophenols, including PCP, in yeast and mice ("mammalian spot test"). He used S. cerevisiae MP-1, a diploid multipurpose strain for screening intergenic recombination (mitotic crossing over), intragenic recombination (mitotic gene conversion) and forward mutation. He incubated cell suspensions at 25 C with 400 mg/liter PCP for 3.5 hours. He spread aliquots of the suspensions, approximately $3x10^7$ cells, on solid nutrient-deficient (intragenic recombinants and mutants) or complete (intergenic recombinants) media and incubated at 25 C for 4 and 8 days respectively. Fahrig reported statistically significant ($p<0.001$) increases is foward mutation and mitotic gene conversion. Table 16 contains the results of this experiment.

In the mammalian spot test, he mated females of inbred C57BL/6JHan strain mice to males of rotation bred T-stock. The progeny of this combination are susceptible to color spots in the adult coat if a mutagenic agent is injected into the peritoneal cavity of the dam during the tenth day of fetal development. The incidence of color spots in untreated mice bred as described was 0.1%. A dosage of 50 mg/kg PCP to pregnant mice produced color spots in 0.6% of the progeny; a dosage with 100 mg/kg resulted in a 1.3% incidence of spots. Fahrig did not give the statistical significance of these data.

A geneticist and statistician assigned to EPA have reviewed the Fahrig et al. paper (1978). In the opinion of the geneticist, this study does not provide evidence of the mutagenicity of PCP. This opinion was based on the fact that the experiment has certain shortcomings. Among these are absence of information on the controls as well as on maternal toxicity (Mauer, 1978). Only two animals were affected at each dose level; the EPA statistician has found that this response is not statistically significant at the 0.05 level (Rosai, 1978) using the chi-square test.

For these reasons, the reviewers did not consider the mammalian spot test to be sufficient evidence of mutagenicity, and the criteria of multitest evidence of 40 CFR Section 162.11 (a)(3)(ii)(A) are not met.

It should be noted that mutagenicity tests on PCP were negative with the Ames test (Andersen et al. 1972), the host-mediated assay (Buselmaier et al. 1973), and the sex-linked recessive lethal test on Drosophila (Vogel and Chandler, 1974).

C. Chloracne

Chloracne ("chlorine acne") is a human skin disorder characterized by distention of hair follicles by horny cutaneous tissue, and by a decrease or absence of the sebaceous glands in the area of infection. This condition has been observed in workers in PCP manufacturing plants and wood preserving operations (Baader and Bauer, 1951). Chloracne can arise in these workers weeks or months after exposure, and at first was thought to be due to PCP itself. However, using the rabbit ear test, Jones et al. showed in 1962 that the acnegenic agent in the herbicide 2,4,5-T was its contaminant TCDD. Further study of the acnegenic effects of pure and commercial grade PCP identified its dioxin contaminants as the causative agent (Johnson et al., 1973).

D. Hepatic Effects

Goldstein et al. (1976) fed pure and technical grade PCP to female Sherman rats for 8 months at dosages of 20, 100, and 500 ppm. Technical PCP produced hepatic porphyria at 100 and 500 ppm, and all doses caused increased hepatic aryl hydrocarbon hydroxylase activity, glucuronyl transferase activity, liver weight, cytochrome P-450, and microsomal heme. N-demethylase activity was not affected. In contrast, pure PCP had no significant effect on these parameters, except for increasing glucuronyl transferase at 500 ppm. Both PCP types decreased the rate of body weight gain at 500 ppm. The technical PCP used contained 8 ppm hexa-, 520 ppm hepta-, and 1380 ppm octachlorodibenzodioxin. Pure PCP contained less than 0.1 ppm each of these contaminants.

Kimbrough and Linder (1975) fed 1000 ppm "relatively pure" PCP and technical PCP to male rats for 3 months. All of the animals were reported to have statistically significant enlargement of the liver when compared to the controls. Histological examination of the liver using the light microscope showed that the rats fed technical PCP had foamy cytoplasm or pronounced vacuolation of the hepatocytes, inclusions, single hepatocellular necrosis, interstitial fibrosis, and a brown pigment in macrophages and Kupffer cells.

OCT 18 1978

V 4 3 1 2 0 2

TABLE 17. Toxicity of pentachlorophenol to mammals [1/]

Examination with the electron microscope showed an increase in smooth endoplasmic reticulum, many lipid vacuoles, and atypical mitochondria. Livers of rats fed the relatively pure PCP showed enlarged hepatocytes, and many cells contained inclusions in their cytoplasm. Electron microscope studies showed a slight increase in smooth endoplasmic reticulum, atypical mitochondria, and some lipid vacuoles. Livers of control rats were normal. Kimbrough and Linder did not report the amount of dioxin contaminants in the pure and technical PCP which was used in the study.

In 1976, Schwetz et al. observed discoloration of the liver in female rats fed 10 or 30 mg/kg/day PCP. Histological examination revealed pigmented material in the hepatocytes surrounding the central veins with smaller amounts present in the reticuloendothelial cells. Hepatocytes in the centrilobular region also contained pigmented material but were not necrotic. The PCP used in this study was representative of Dow's product and contained approximately 30 ppm total dioxins.

E. Toxicity to Humans

There are reports of deaths caused by industrial or accidental exposure to PCP. In most cases exposure occurred by dermal contact, either to PCP in solution or to materials treated with PCP. Bergner et al. (1965) described five cases of PCP intoxication in Winnipeg in 1963. The one fatality involved a worker in a wood treating plant who, using his bare hands, dipped wood into a vat containing a solution of 4.1% PCP in petroleum solvent. A similar incident had previously been reported in 1952 in France by Truhaut et al. In this case two workers were immersing wooden planks in a 3% aqueous solution of a mixture of 80% Na-PCP and 20% sodium tetrachlorophenate. The workers plunged their hands and forearms into the liquid bath to remove the planks. After 6 days of this work, both men became ill and ultimately died. In all three cases, the initial symptoms of intoxication were profuse sweating and elevated temperatures.

These same symptoms were observed in an incident involving nine neonates in a nursery for newborn infants in St. Louis. Robson et al. (1969) reported these and other symptoms in these infants, two of whom died. Other symptoms reported were increased pulse rate (> 150/minute), hepatomegaly, and respiratory distress. Of the seven survivors, six received exchange blood transfusions, and one received only supportive therapy. Exposure was proven to be via percutaneous absorption of Na-PCP which had been mistakenly used to launder the infants' diapers and bed linens.

In a followup paper, Armstrong et al. (1969) measured PCP levels in samples of these diapers and linens, in autopsy tissues, and in the serum of a surviving infant. They detected the following PCP residues: six diapers, 2.64 to 17.20 mg/100 g; two shirts, 7.38 and 7.90 mg/100 g; two shirt backs, 22.40 and 195 mg/100 g; two crib pads, 4.89 and 178.70 mg/100 g; one mattress pad, 14 mg/100 g; one pillow case, 6.25 mg/100 g; and two musline, 1.15 and 2.80 mg/100 g. In autopsy tissues, PCP measurements were: kidney, 2.8 mg/100 g; adrenal, 2.7 mg/100 g; heart and blood vessel, 2.1 mg/100 g; fat, 3.4 mg/100 g; and connective tissue, 2.7 mg/100 g. An infant who survived through exchange transfusion, had PCP levels of 11.8 mg/100 ml before, 6.5 mg/100 ml during, and 0.2 mg/ml after the transfusion.

F. Toxicity to Animals

Toxicological data on PCP are complicated by the presence of varying quantities of tetrachlorophenols, dioxins, and furans in the technical material. Table 17 summarizes the available toxicity data for PCP on various mammalian species.

There are reports of fatalities to farm animals following exposure to PCP. Spencer, in 1957, described the deaths of two Hereford cows within 24 hours after drinking a 5% solution of PCP in kerosene. Blevins (1965) reported on the death of a litter of ten pigs kept in a farrowing house whose floor had been overly treated with PCP dissolved in used crankcase oil. They theorized that the pigs were triply exposed by direct adsorption through the skin, from the milk of the gilt, and through inhalation of PCP "aerosol." The gilt recovered when it was moved outside the farrowing house.

Adelman et al. (1976) established the LC-50's for Na-PCP as 0.21 mg/liter for fathead minnows, and 0.22 mg/liter for goldfish. Holmberg et al. (1972) found that the eel (Anguilla anguilla L) did not survive 5 days of exposure to 0.1 ppm Na-PCP in fresh water. Hanes et al. (1968) found that the LC-50 for coho salmon (Onchorynchus kisutch) is 0.15 mg/liter of K-PCP.

The Public Health Service of DHEW has reports on numerous fish kills from 1964 to 1970 that were caused by effluents from wood treatment plant washing into fresh water. Since 1970, the Pesticide Episode Review System (PERS) has recorded only four incidents involving fish kills. This indicates either that wood preserving practices with effluents have become more stringent, or that incidents are not being reported to PERS.

TABLE 17. Toxicity of pentachlorophenol to mammals [1/]

Organism (Sex, Strain)	Route of Administration	Dose or Concentration	Reference
Wistar Rats	Oral (0.5% in Stanoflex fuel oil)	27.3 mg/kg	Deichmann et al. (1942)

V 43/202 OC 18 78

G. Effects of Tetrachlorophenol

As stated previously, the presence of tetrachlorophenols in all PCP products raises the possibility that adverse effects of PCP could be attributed to these compounds. The toxicological properties of tetrachlorophenols have not been studied extensively. The "Registry of Toxic Effects of Chemical Substances," published by the National Institute of Occupational Safety and Health, DHEW, lists the oral LD_{50} for the rat as 140 mg/kg, both for tetrachlorophenol (presumably mixed isomers) and for 2,3,4,6-tetrachlorophenol.

Schwetz et al. (1974a) evaluated the effects of purified and commercial grade tetrachlorophenol on rat embryonal and fetal development. They fed pregnant Sprague-Dawley rats 10 and 30 mg/kg/day on days 6-15 inclusive of gestation. These doses had no effect on resorptions, fetal body weight, or fetal crown-rump length. At 30 mg/kg/day, there were statistically significant increases in delayed ossification of the skull bones for both tetrachlorophenol types. Schwetz et al. observed subcutaneous edema at 10 mg/kg/day with both compounds, but not with the 30 mg/kg/day doses. Since this effect was not dose-related, the authors speculate that it may have been due to chance.

Appendix 1

Na-PCP Content in Water Vapor

Na-PCP is registered for use as a slimicide in cooling towers, paper pulp mills and tanneries. In these uses, Na-PCP is normally found in water at concentrations of 48, 113 and 32 mg/liter respectively. The humidity in the work areas at these sites can approach 100%, due to vaporization from the large volumes of water required. Na-PCP can also vaporize from solution, and the amounts of Na-PCP in the vapor can be estimated. In the following calculations, it is assumed that the Na-PCP/water solution is an ideal binary system. The following constants will be required:

At 100% humidity and 20°C,

weight of water vapor = 17.3 gms/m^3

vapor pressure of water = 17.54 mm

Vapor pressure of Na-PCP (assuming same volatility as PCP) = 4.7×10^{-4} mm

Molecular weight of water = 18

Molecular weight of Na-PCP = 289

In 1 liter of solution, at 48 mg/l Na-PCP, there are approximately .048/289 = 1.7×10^{-4} moles Na-PCP and 1000 gms/18 = 55.5 moles water. According to Raoult's Law, the partial pressure (p°) of each component in a binary system equals the mole fraction M_f (moles of component/total moles present) multiplied by the vapor pressure of the component (VP_c):

$p° = M_f \times VP_c$

59

Then:

$p°\ Na\text{-}PCP = (1.7 \times 10^{-4}/55.5)(4.7 \times 10^{-4}) = 1.4 \times 10^{-9}$ mm

$p°\ Water = (55.5/55.5)(17.54) = 17.54$ mm

The mole fraction of Na-PCP vapor in the air can be calculated using the formula:

$$\text{mole fraction Na-PCP} = \frac{p°\ \text{Na-PCP}}{p°\ \text{Water} + p°\ \text{Na-PCP}}$$

$$= \frac{1.4 \times 10^{-9}}{17.54 + 1.4 \times 10^{-9}}$$

$$\text{or } \frac{\text{moles Na-PCP in vapor}}{\text{moles water in vapor}} = 8 \times 10^{-11}$$

The moles of water on the vapor is

$$\frac{17.3\ gms/m^3}{18} = 0.96 \text{ moles water}/m^3$$

Therefore

moles Na-PCP = 0.96 moles water/m^3 X 8×10^{-11}

= 7.7×10^{-11} moles/m^3

and

Grams Na-PCP = 7.7×10^{-11} moles/m^3 X 298

= 0.02×10^{-3} ug/m

These same calculations apply for vapors in pulp mills and tanneries, and using the concentrations of Na-PCP specified earlier, these calculate to:

Pulp mills: Na-PCP = 0.047 ug/m^3

Tanneries: Na-PCP = 0.013 ug/m^3

V 43 / 203 OCT 19 78

HOW TO USE THE FEDERAL REGISTER WORKSHOPS

FOR: Any person who must use the Federal Register and Code of Federal Regulations.

WHAT: Free public workshops (approximately 2½ hours) to present:

1. Brief history of the Federal Register system.
2. Difference between legislation and regulations.
3. Relationship of Federal Register and the Code of Federal Regulations.
4. Important elements of a typical Federal Register document.
5. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them, as part of the General Services Administration's efforts to encourage public participation in government actions. There will be no discussion of specific agency regulations.

ALBANY, NEW YORK

WHEN: October 27 and 28, 1978, at 1:00 p.m.
WHERE: Meeting Room No. 1, Cultural Education Center, Empire State Plaza, Albany, New York.
RESERVATIONS: Call Elizabeth Closson, 518–474–5943.

DALLAS, TEXAS

WHEN: October 30, 1978, at 9:30 a.m.
WHERE: Conference Room 7A23, Earle Cabell Federal Building, 1100 Commerce St., Dallas, Texas.
RESERVATIONS: Call Federal Information Center, 214–749–2131.

FORT WORTH, TEXAS

WHEN: October 31, 1978, at 9:30 a.m.
WHERE: Auditorium, 7th Floor, Lone Star Gas Co., 908 Monroe St., Fort Worth, Texas.
RESERVATIONS: Call Federal Information Center, 817–334–3624.

AUSTIN, TEXAS

WHEN: November 2, 1978, at 2 p.m.
WHERE: Room 100B, Regan Office Building, 15th & Congress Sts., Austin, Texas.
RESERVATIONS: Call Peggy Lockhart or Bob Walton, 512–475–6725.

federal register
Area Code 202 Phone 523–5240

Published daily, Monday through Friday (no publication on Saturdays, Sundays, or on official Federal holidays), by the Office of the Federal Register, National Archives and Records Service, General Services Administration, Washington, D.C. 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C., Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

The FEDERAL REGISTER provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive orders and Federal agency documents having general applicability and legal effect, documents required to be published by Act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The FEDERAL REGISTER will be furnished by mail to subscribers, free of postage, for $5.00 per month or $50 per year, payable in advance. The charge for individual copies is 75 cents for each issue, or 75 cents for each group of pages as actually bound. Remit check or money order, made payable to the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402.

There are no restrictions on the republication of material appearing in the FEDERAL REGISTER.

rules and regulations

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each month.

Title 7—Agriculture

CHAPTER XVIII—FARMERS HOME ADMINISTRATION, DEPARTMENT OF AGRICULTURE

SUBCHAPTER B—LOANS AND GRANTS PRIMARILY FOR REAL ESTATE PURPOSES

[FmHA Instruction 444.1]

PART 1822—RURAL HOUSING LOANS AND GRANTS

Subpart A—Section 502 Rural Housing Loan Policies, Procedures, and Authorizations

COMMUNITIES ELIGIBLE FOR ASSISTANCE

AGENCY: Farmers Home Administration, USDA.

ACTION: Final rule.

SUMMARY: The Farmers Home Administration amends its regulation listing communities eligible for assistance. This action is being taken because an official census shows that the community of Rutland City, Vt., is a rural area of 10,000-20,000 population. The intended effect of this action is to designate this community as eligible for FmHA Rural Housing assistance.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Mr. Wesley L. Harris, Director, Single Family Housing Loan Division, telephone 202-447-4295.

SUPPLEMENTARY INFORMATION: Exhibit G to subpart A, part 1822, chapter XVIII, title 7, of the Code of Federal Regulations is amended. An official census has been taken which shows the community of Rutland City, Vt., to have a population of 19,293 and is not part of or associated with an urban area. It is, therefore, an eligible area for Farmers Home Administration assistance as determined by the Secretary of Agriculture. It is the policy of this Department that rules relating to public property, loans, grants, benefits, or contracts shall be published for comment notwithstanding the exemption in 5 U.S.C. 553 with respect to such rules. This amendment, however, is not published for proposed rulemaking since publishing for comment would delay this area from becoming eligible for the financing it needs and would thus be contrary to the public interest.

Accordingly, exhibit G is amended to add an eligible area as follows:

Exhibit G [Amended]

Addition: The following place is added to exhibit G, paragraph II as an eligible area:

Vermont: After "Montpelier-Barre" add "Rutland City."

(42 U.S.C. 1480; delegation of authority by the Secretary of Agriculture, 7 CFR 2.23; delegation of authority by the Assistant Secretary for Rural Development, 7 CFR 2.70.)

Dated: October 4, 1978.

GORDON CAVANAUGH,
Administrator, Farmers Home Administration.

[3410-07-M]

SUBCHAPTER D—GUARANTEED LOANS

[FmHA Instruction 449.1]

PART 1845—FmHA EMERGENCY LIVESTOCK LINE OF CREDIT GUARANTEES

AMENDMENT

AGENCY: Farmers Home Administration, USDA.

ACTION: Final rule.

SUMMARY: The Farmers Home Administration amends its regulations concerning loan guarantees. The intended effect of this action is to make clear that the loan guarantees issued under this regulation are "unconditional." This action is taken as a result of advice from the Comptroller of the Currency.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Mr. William Krause, 202-447-7600.

SUPPLEMENTARY INFORMATION: Section 1845.13(c) of part 1845 of chapter XVIII, title 7, Code of Federal Regulations is amended. The purposes of the amendment are to explain the full faith and credit provisions of the loan guarantee by defining the phrases "Use of loan funds for unauthorized purposes," and "unauthorized purpose" and also to state that claims arising within 90 days of the date of the loan guarantee will not be excluded from its coverage in spite of what the loan guarantee form itself said. The Comptroller of the Currency advised FmHA that the full faith and credit provisions of the contract of guarantee did not meet requirements of 12 U.S.C. 84(10) which exempts from the lending limit requirements imposed on national banks' loans that are guaranteed unconditionally by the Federal Government. It is the opinion of the Comptroller General that the proposed revisions to the full faith and credit sections of the regulations will make the guarantee "unconditional," as the word is used in 12 U.S.C. 84(10).

It is the policy of this Department that rules relating to public property, loans, grants, benefits, or contracts shall be published for comment notwithstanding the exemption in 5 U.S.C. 553 with respect to such rules. This amendment, however, is not published for proposed rulemaking, since the amendment makes clear that FmHA's loan guarantee is unconditional and thereby benefits the lending institutions which participated in this FmHA guaranteed loan program. Therefore, public participation is unnecessary.

Accordingly, § 1845.13(c) is amended to read as follows:

§ 1845.13 EL line of credit limitations and special provisions.

* * * * *

(c) *Guarantee coverage (full faith and credit).* The contract of guarantee constitutes an obligation supported by the full faith and credit of the United States and is incontestable except for fraud or misrepresentation of which the lender has actual knowledge at the time it became such lender or which lender participates in or condones. The contract of guarantee will be unenforceable by the lender to the extent any loss is occasioned by violation of usury laws, use of loan funds for unauthorized purposes, negligent servicing, or failure to obtain the required security regardless of the time

at which FmHA acquires knowledge of the foregoing. As used in this paragraph and in any contract of guarantee (including any now outstanding) in

Immigration and Naturalization on or before December 18, 1978.

ADDRESSES: Please submit written representations, in duplicate, to the

ralization Service, 425 Eye Street NW., Washington, D.C. 20536, telephone 202-376-8373.

[7590-01-M]

Title 10—Energy

mission staff in October 1977 published NUREG-0302 Rev. 1, "Remarks Presented (Questions/Answers) Discussed at the Public Regional Meet-

turer/distributor on the basis of the manufacturer's published specifications. At a defined stage of procurement, when the item is "dedicated" to

at which FmHA acquires knowledge of the foregoing. As used in this paragraph and in any contract of guarantee (including any now outstanding) in which the phrase appears, "use of loan funds for unauthorized purposes" refers to the situation in which the lender in fact agrees with the borrower that loan funds are to be so used and the phrase "unauthorized purpose" means any purpose not listed by the lender in the completed application as approved by FmHA. FmHA will not implement the provision contained in Form FmHA 449-27, "Contract of Guarantee" (7-17-75) which states: "This contract shall not cover any claims that may arise within 90 days of the date hereof."

* * * * *

(Sec. 10, Pub. L. 93-357, 88 Stat. 392; delegation of authority by the Secretary of Agriculture, 7 CFR 2.23; delegation of authority by the Assistant Secretary for Rural Development, 7 CFR 2.70.)

Title 8—Aliens and Nationality

CHAPTER I—IMMIGRATION AND NATURALIZATION SERVICE, DEPARTMENT OF JUSTICE

PART 108—ASYLUM

PART 236—EXCLUSION OF ALIENS

Asylum: Filing of Application in Exclusion Proceedings

AGENCY: Immigration and Naturalization Service, Justice.

ACTION: Stay of final rule and request for comments.

SUMMARY: The purpose of this order is to stay the final rules published at 43 FR 40801-03 on September 13, 1978, to allow for public participation in this rulemaking proceeding. The Service requests comments based on the text of the rules published at 43 FR 40801-03. Full consideration will be given to all relevant representations received and the Service will reconsider the rules following an analysis of those representations.

DATES: Final rules stayed pending receipt and analysis of relevant public comments. Interested persons are requested to submit relevant data, views, and arguments concerning these stayed rules to the Commissioner of Immigration and Naturalization on or before December 18, 1978.

ADDRESSES: Please submit written representations, in duplicate, to the Commissioner of Immigration and Naturalization, Room 7100, 425 I Street NW., Washington, D.C. 20536.

FOR FURTHER INFORMATION CONTACT:

James G. Hoofnagle, Jr., telephone 202-376-8373.

Dated: October 16, 1978.

LEONEL J. CASTILLO,
Commissioner of
Immigration and Naturalization.

[4410-10-M]

PART 242—PROCEEDINGS TO DETERMINE DEPORTABILITY OF ALIENS IN THE UNITED STATES: APPREHENSION, CUSTODY, HEARING, AND APPEAL

Cost of Maintenance of Aliens in Service Custody

AGENCY: Immigration and Naturalization Service, Justice.

ACTION: Final rule.

SUMMARY: This final rule amends the regulations of the Immigration and Naturalization Service. Present Service regulations provide that an alien confined in an institution or hospital shall not be accepted into physical custody by the Service until an order of deportation has been made and the Service is ready to deport the alien. It has come to Service attention that there have been instances in which this provision has been misinterpreted to apply to aliens in penal institutions. The regulation was actually intended to insure that the Service did not take custody of mentally ill or physically disabled aliens prior to obtaining an order of deportation since to do so might incur Service liability for medical costs indefinitely. Therefore, in order to make it clear that this regulation does not pertain to aliens confined in penal institutions, the first sentence will be amended to provide that an alien confined because of physical or mental disability in an institution or hospital shall not be accepted into physical custody by the Service until an order of deportation has been entered and the Service is ready to deport the alien.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

James G. Hoofnagle, Jr., Instructions Officer, Immigration and Naturalization Service, 425 Eye Street NW., Washington, D.C. 20536, telephone 202-376-8373.

SUPPLEMENTARY INFORMATION: For the reasons set forth in the above summary, chapter I of title 8 of the Code of Federal Regulations is hereby revised as set forth below.

PART 242—PROCEEDINGS TO DETERMINE DEPORTABILITY OF ALIENS IN THE UNITED STATES: APPREHENSION, CUSTODY, HEARING AND APPEAL

Section 242.3(b) is hereby revised as set forth below:

§ 242.3 Confined aliens, incompetents, and minors.

* * * * *

(b) *Service custody; cost of maintenance.* An alien confined because of physical or mental disability in an institution or hospital shall not be accepted into physical custody by the Service until an order of deportation has been entered and the Service is ready to deport the alien. When such an alien is an inmate of a public or private institution at the time of the commencement of the deportation proceedings, expenses for the maintenance of the alien shall not be incurred by the Government until he is taken into physical custody by the Service.

(Sec. 103; 8 U.S.C. 1103; interpret or apply sec. 242 (8 U.S.C. 1252).)

This amendment is published pursuant to section 552 of title 5 of the United States Code as amended by Pub. L. 93-502 (88 Stat. 1561) and the authority contained in section 103 of the Immigration and Nationality Act (8 U.S.C. 1103), 28 CFR 0.105(b), and 8 CFR 2.1. Compliance with the provisions of section 553 of title 5 of the United States Code as to notice of proposed rulemaking and delayed effective date is unnecessary in this instance because the amendment contained in this order is editorial in nature, published for the purpose of clarifying the existing regulation.

Dated: October 16, 1978.

LEONEL J. CASTILLO,
Commissioner of
Immigration and Naturalization.

[FR Doc. 78-29512 Filed 10-18-78; 8:45 am]

[7590-01-M]

Title 10—Energy

CHAPTER I—NUCLEAR REGULATORY COMMISSION

PART 21—REPORTING OF DEFECTS AND NONCOMPLIANCE

Amendments Regarding Basic Component

AGENCY: Nuclear Regulatory Commission.

ACTION: Final rule.

SUMMARY: The Nuclear Regulatory Commission is amending its regulations to limit the types of items that are within the scope of its rule for reporting defects and noncompliance. This action is believed necessary since the currently effective rule is being applied by organizations within its scope to an extent not contemplated and is causing problems relating to the supplying of equipment. The amendments provide that items that are available in general commerce and which have no unique requirements imposed for nuclear application will not be within the scope of the revised rule for reporting defects and noncompliance. These amendments will alleviate the above problem.

DATE: These amendments will be effective on October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Mr. W. E. Campbell, Jr., Office of Standards Development, U.S. Nuclear Regulatory Commission, Washington, D.C. 20555, 301-443-5913.

SUPPLEMENTARY INFORMATION: Notice is hereby given that the Nuclear Regulatory Commission (hereinafter the "Commission") has decided to amend 10 CFR Part 21, "Reporting of Defects and Noncompliance." Specifically, the Commission has decided to impose limits on the types of items that are used in facilities or activities licensed pursuant to part 30, 40, 50, 70, or 71 that are within the scope of 10 CFR Part 21.

On March 3, 1975, 10 CFR Part 21 was published as a proposed rule (40 FR 8832). On June 6, 1977, 10 CFR Part 21 was published as an effective rule (42 FR 28891) with some portions of the rule to be effective on July 6, 1977, and the remaining portions to be effective on January 6, 1978. On July 7, 1977, a FEDERAL REGISTER notice (42 FR 34886) changed the initial effective date to August 10, 1977, vice July 6, 1977. To facilitate implementation of 10 CFR Part 21 a series of public regional meetings were held in July 1977 and based on these meetings the Commission staff in October 1977 published NUREG-0302 Rev. 1, "Remarks Presented (Questions/Answers) Discussed at the Public Regional Meetings To Discuss Regulations (10 CFR Part 21) for Reporting Defects and Noncompliance." NUREG-0302 Rev. 1 contains staff guidance relating to the implementation and enforcement of 10 CFR Part 21 and is available through the National Technical Information Service, Springfield, Va. 22161. In the preamble to the effective rule, the Commission stated that it intended "to examine closely the implementation of 10 CFR Part 21 with a view to making any clarifying or other changes that may be warranted in the light of experience."

Part 21 defines a "basic component" subject to the reporting and other requirements of the rule. In response to inquiries during and subsequent to the public regional meetings relating to "off-the-shelf" or "catalog" items, the staff provided guidance that such items may be within the scope of 10 CFR Part 21 depending on the circumstances at the time of procurement. This guidance has been construed by numerous organizations to mean that the requirements of 10 CFR Part 21 apply to manufacturers and distributors who are involved to any extent in supplying basic components, or parts of basic components, of a facility or activity including supplying base material or functional assemblies to the manufacturer of the "basic component." This meaning has led to the imposition of 10 CFR Part 21 at a procurement stage where there are no design or specification requirements that are unique to application of the item at a nuclear facility or activity, e.g., relays.

The use of this meaning of basic component has not improved the quality of such items and, therefore, has not enhanced safety. Instead it is causing cost increases and inability to obtain needed supplies. To the extent that the purchaser is unable to obtain a needed item from the most qualified supplier and must turn to other less qualified suppliers, defining basic component to include such an item may to some extent detract from safety. To relieve the conditions that are resulting from the above interpretation and to mitigate this potential reduction of safety part 21 is being amended to remove from the scope of 10 CFR Part 21, during specific stages of procurement, those items of a commercial grade, e.g., bearings, relays, and bar stock that are (1) not subject to design or specification requirements unique to facilities or activities licensed by the Commission, (2) used in applications other than facilities or activities licensed by the Commission, and (3) able to be ordered from the manufacturer/distributor on the basis of the manufacturer's published specifications. At a defined stage of procurement, when the item is "dedicated" to a "basic component" (see 10 CFR 21.3(c-1)) the item will become subject to the requirements of 10 CFR Part 21.

Prior to these amendments 10 CFR Part 21 included within its scope direct inspections of licensees and suppliers as provided under section 206 of the Energy Reorganization Act of 1974. The revised rule will narrow the scope of the NRC inspection authority based on 10 CFR Part 21. However, NRC will retain the authority to inspect suppliers of commercial grade items provided by subsection 206(d) where reasonably necessary to aid in the identification by the Commission of defects and noncompliance reportable by licensees and suppliers of basic components as provided in 10 CFR Part 21.

Procurement documents that were issued in accordance with 10 CFR 21.31 after August 10, 1977, and invoked 10 CFR Part 21 may be amended to delete reference to 10 CFR Part 21 if the item being procured complies with the definition of a "commercial grade item" (see 10 CFR 21.3(a-1)).

The amended rule will clarify the applicability of 10 CFR Part 21 and thereby allow for precise application of the rule to those items that are subject to design or specification requirements unique to facilities or activities licensed pursuant to part 30, 40, 50, 60, or 71 of 10 CFR Chapter I.

Since the amendments are intended, in part, to respond to a number of requests for exemptions from 10 CFR Part 21 which may be necessary to insure the continued availability of components for the nuclear industry and since the amendments narrow the scope of the regulation thereby relieving a restriction on persons subject to it, but without any significant adverse safety consequences, the Commission has found that good cause exists for omitting notice of proposed rulemaking and public procedure thereon as unnecessary. Accordingly, the amendments are to be effective October 19, 1978.

Public comments on these amendments and on other portions of 10 CFR Part 21 are invited in order to evaluate the need for any further clarifying or other changes to 10 CFR Part 21. Comments that are received prior to December 18, 1978, will be particularly useful in evaluating the need for and content of additional amendments.

1. The final sentence of § 21.2 is amended to read as follows:

§ 21.2 Scope.

* * * Nothing in these regulations should be deemed to preclude either

an individual or a manufacturer/supplier of a commercial grade item (see § 21.3(a-1)) not subject to the regulations in this part from reporting to the

[6714-01-M]

Title 12—Banks and Banking

Board of Directors for its consideration and upon receipt of such request the Board of Review shall forward the application to the Board of Directors

could be an ignition source to flammable fluids or vapors which could be present in the vicinity of the resistor.

cordance with AMD-BA Service Bulletin F10-0162, dated December 6, 1977, and Rev. 1, dated March 20, 1978, or equivalent approved by the Chief, Aircraft Certification

V 4 3 / 2 0 3 0 C 1 9 7 8

an individual or a manufacturer/supplier of a commercial grade item (see § 21.3(a-1)) not subject to the regulations in this part from reporting to the Commission a known or suspected defect or failure to comply and, as authorized by law, the identity of anyone so reporting will be withheld from disclosure.[1]

2. A new sentence is added to the end of § 21.3(a) to read as follows:

§ 21.3 [Amended]

(a) * * * A commercial grade item is not a part of a basic component until after dedication (see § 21.3(c-1)).

* * * * *

3. New paragraphs (a-1) and (c-1) are added to § 21.3 to read as follows:

* * * * *

(a-1) "Commercial grade item" means an item that is (1) not subject to design or specification requirements that are unique to facilities or activities licensed pursuant to part 30, 40, 50, 70, or 71 of this chapter and (2) used in applications other than facilities or activities licensed pursuant to part 30, 40, 50, 70, or 71 of this chapter and (3) to be ordered from the manufacturer/supplier on the basis of specifications set forth in the manufacturer's published product description (for example a catalog).

* * * * *

(c-1) "Dedication" of a commercial grade item occurs after receipt when that item is designated for use as a basic component.

* * * * *

4. A new sentence is added to the end of § 21.7.

§ 21.7 Exemptions.

* * * Suppliers of commercial grade items are exempt from the provisions of this part to the extent that they supply commercial grade items.

(Sec. 161, Pub. L. 83-703, 68 Stat 948; sec. 234, Pub. L. 91-161, 83 Stat. 444; sec. 206, Pub. L. 93-438, 88 Stat 1246 (42 U.S.C. 2201, 2282, 5846).)

Dated at Washington, D.C., this 13th day of October 1978.

For the Nuclear Regulatory Commission.

SAMUEL J. CHILK,
Secretary of the Commission.

[6714-01-M]

Title 12—Banks and Banking

CHAPTER III—FEDERAL DEPOSIT INSURANCE CORPORATION

SUBCHAPTER B—REGULATIONS AND STATEMENTS OF GENERAL POLICY

PART 303—APPLICATIONS, REQUESTS, AND SUBMITTALS

Amendments to Delegations of Authority Respecting Section 19 Applications

AGENCY: Federal Deposit Insurance Corporation.

ACTION: Final rule.

SUMMARY: The purpose of this amendment is to provide a faster method of processing requests for employment with insured banks. No person is allowed to serve as a director, officer, or employee of an insured bank if he or she has been convicted of a crime involving dishonesty or breach of trust unless FDIC gives its approval. At present, all requests for employment are processed through the FDIC's regional and Washington offices, and are ultimately acted on by FDIC's Board of Directors. Where employment does not constitute a significant threat to the safety and soundness of the bank, the request may be handled faster by the Board of Review (a standing committee of the FDIC) or the Director of FDIC's Division of Bank Supervision and the Regional Director of the Region in which the employer is located.

EFFECTIVE DATE: This amendment is effective November 20, 1978.

FOR FURTHER INFORMATION CONTACT:

Karl J. Seif, Senior Attorney, Federal Deposit Insurance Corporation, Room 4105-F, 550 17th Street NW., Washington, D.C. 20429, 202-389-4422.

SUPPLEMENTARY INFORMATION: Section 19 of the Federal Deposit Insurance Act (12 U.S.C. 1819) provides that no person may serve as a director, officer, or employee of an insured bank who has been convicted of a crime involving dishonesty or breach of trust without the written consent of FDIC. Normally consent has been granted by the FDIC's Board of Directors upon application by an insured bank desiring to employ or continue to employ such an individual. In order to expedite the handling of section 19 applications, FDIC's Board of Directors is delegating to the Board of Review, as the case may be, or to the Director, Division of Bank Supervision, or where confirmed in writing by the Director, Division of Bank Supervision, to the Regional Director of the Region in which the applicant bank is located, the authority to approve section 19 applications. The scope of the delegation goes to applications by all insured banks, since the statute (Section 19 of the Federal Deposit Insurance Act) applies to all insured banks and is not limited to nonmembers. Section 303.11 has been amended to reflect this.

In adopting this amendment to FDIC's regulations, FDIC's Board of Directors did not follow the requirements of section 553(b) of Title 5 of the United States Code and §§ 302.1 and 302.2 of FDIC's regulations with respect to notice and public participation because the amendment relates solely to rules of agency organization, procedure, and practice, and because the Board of Directors found that notice and opportunity for public comment thereon would be unnecessary and would serve no useful public purpose. 12 CFR 303.11 is amended by adding the following paragraph:

§ 303.11 Delegation of authority to act on certain applications.

* * * * *

(e) *Applications filed pursuant to section 19 of the Federal Deposit Insurance Act.* (1) The Board of Directors of the Federal Deposit Insurance Corporation has delegated to the Corporation's Board of Review the authority on behalf of the Board of Directors to approve applications filed by insured banks with the Corporation pursuant to section 19 of the Federal Deposit Insurance Act seeking the consent of the Corporation for the employment of any director, officer, or employee who has been convicted or is hereafter convicted of any criminal offense involving dishonesty or a breach of trust. Such authority to approve includes any director, and any officer or employee who has authority to participate or may hereafter participate in policymaking functions of such insured bank, or has direct or indirect control of 5 percent or more of the voting rights of any class of voting stock of such insured bank: *Provided,* That the insured bank's primary supervisory authority interposes no objection to such application. This authority shall extend to the approval but not to the denial of such applications. The delegation of authority to the Board of Review to approve applications under this subparagraph and § 303.11(e)(2) does not preclude the Board of Directors from acting on any application upon which the Board of Review may not wish to act. Any voting member of the Board of Review attending the meeting at which an application is considered may request that the application be referred to the Board of Directors for its consideration and upon receipt of such request the Board of Review shall forward the application to the Board of Directors together with its recommendation as to the disposition of such application.

(2) The Board of Directors has delegated to the Director of the Corporation's Division of Bank Supervision, and where confirmed in writing by the Director of the Division of Bank Supervision, to the Regional Director of the Region in which the applicant bank is located, the authority on behalf of the Board of Directors to approve requests for employment filed by insured banks pursuant to section 19 of the Federal Deposit Insurance Act for all other employees and nonpolicymaking officers: *Provided,* That the applicant bank's primary supervisory authority offers no objection to such application. This authority shall extend to the approval but not to the denial of such applications. The delegation of authority to the Regional Director to approve applications under this subparagraph does not preclude the Director of the Division of Bank Supervision or the Board of Review from acting on any application which the Regional Director may not wish to approve, or upon which the Regional Director may not wish to act.

By order of the Board of Directors, dated October 1978

FEDERAL DEPOSIT INSURANCE CORPORATION,
ALAN R. MILLER,
Executive Secretary.

Title 14—Aeronautics and Space

CHAPTER I—FEDERAL AVIATION ADMINISTRATION, DEPARTMENT OF TRANSPORTATION

[Docket No. 17938; Amdt. 39-3321]

PART 39—AIRWORTHINESS DIRECTIVES

Avions Marcel Dassault-Breguet Aviation Falcon 10 Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new Airworthiness Directive (AD) which requires modification of the freon air-conditioning system electrical starting circuit on certain Avions Marcel Dassault-Breguet Aviation Falcon 10 airplanes. The AD is needed to prevent overheating of the freon system compressor motor starting resistor. An overheated starting resistor could be an ignition source to flammable fluids or vapors which could be present in the vicinity of the resistor.

DATES: Effective November 20, 1978. Compliance schedule—As prescribed in body of AD.

ADDRESSES: The applicable service bulletin may be obtained from: Falcon Jet Corp., 90 Moonachie Avenue, Moonachie, N.J. 07074. A copy of the service bulletin is contained in the Rules Docket, Room 916, 800 Independence Avenue SW., Washington, D.C. 20591.

FOR FURTHER INFORMATION CONTACT:

D. C. Jacobsen, Chief, Aircraft Certification Staff, AEU-100, Europe, Africa, and Middle East Region, Federal Aviation Administration, c/o American Embassy, Brussels, Belgium, telephone 513.38.30.

SUPPLEMENTARY INFORMATION: A proposal to amend Part 39 of the Federal Aviation Regulations to include an AD requiring modification of the freon air-conditioning system electrical starting circuit on certain Avions Marcel Dassault-Brequet Aviation Falcon 10 airplanes was published in the FEDERAL REGISTER at 43 FR 24849 on June 8, 1978. The proposal was prompted by reports of a significant number of Falcon 10 freon system compressor motor starting resistors overheating and failing in service due to the demanding duty cycle of the compressor motor under certain conditions. The freon system starting resistor is located in the airplane aft accessory compartment and under an overheat condition could provide an ignition source to flammable fluid or vapors in the event of a flammable fluid line or fitting leak.

Interested persons have been afforded an opportunity to participate in the making of the amendment. No objections were received. Accordingly, the proposal is adopted without change.

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of Part 39 of the Federal Aviation Regulations (14 CFR 39.13) is amended by adding the following new Airworthiness Directive:

AVIONS MARCEL DASSAULT-BREGUET AVIATION (AMD-BA). Applies to Falcon 10 airplanes, certificated in all categories, serial Nos. 1 through 111, except serial Nos. 22, 33, and 35.

Compliance is required within the next 200 hours time in service after the effective date of this AD, unless already accomplished.

To reduce the possibility of a fire caused by the freon air-conditioning compressor motor starting resistor overheating, modify the compressor motor starting circuit in accordance with AMD-BA Service Bulletin F10-0162, dated December 6, 1977, and Rev. 1, dated March 20, 1978, or equivalent approved by the Chief, Aircraft Certification Staff, FAA, Europe, Africa, and Middle East Region.

This amendment becomes effective November 20, 1978.

(Secs. 313(a), 601, and 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, and 1423); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); 14 CFR 11.89.)

Issued in Washington, D.C., on October 11, 1978

J. A. FERRARESE,
Acting Director,
Flight Standards Service.

[4910-13-M]

[Docket No. 78-NW-20-AD; Amdt. 39-3317]

PART 39—AIRWORTHINESS DIRECTIVES

Bell Helicopter Models 204B, 205A, 205A-1, and 212 Modified per Chadwick STC SH149WE or SH17NW

AGENCY: Federal Aviation Administration (DOT).

ACTION: Final rule.

SUMMARY: On September 18, 1978, an airmail letter Airworthiness Directive (AD) was issued and made effective upon receipt to all known operators of Bell Helicopter models 204B, 205A, 205A-1, and 212, which had been modified per Chadwick, Inc., STC SH149WE or SH17NW, when used in external-load cargo operations. The AD required additional operating restrictions until the load cell link assembly is replaced with an FAA-approved part. This action was prompted by low cycle fatigue failure of the link of a modified helicopter which occurred while slinging a steel tower, resulting in detachment of the tower from the helicopter. AD action was taken to preclude injury or damage to persons or property on the surface. This condition still exists and the AD is hereby published in the FEDERAL REGISTER to make it effective as to all persons

DATES: The effective date is October 12, 1978, except for recipients of the airmail letter dated September 18, 1978, which contained this amendment. Compliance is required before conducting further flight in external load operations over congested or densely populated areas.

FOR FURTHER INFORMATION CONTACT:

James R. Haynes, Engineering and Manufacturing Branch, FAA North-

NOTE.—The FAA has determined that this document involves a regulation which is not considered to be significant under the procedures and criteria prescribed by Executive Order 12044 and as implemented by interim

SUPPLEMENTARY INFORMATION: This amendment supersedes amendment 39-3222, 43 FR 22341, AD 78-11-04, which currently requires inspec-

(3) In the left engine aft nacelle compartment, inspect the fuel inlet line to the boost pump at the propeller governor control cable for evidence of chafing.

V 4 3 / 2 0 3 0 C 1 9 7 8

FOR FURTHER INFORMATION CONTACT:

James R. Haynes, Engineering and Manufacturing Branch, FAA Northwest Region, 9010 East Marginal Way South, Seattle, Wash. 98108, telephone 206-767-2516.

SUPPLEMENTARY INFORMATION: The load cell link assembly which failed had been in use approximately 200 hours. Failure appears to have been the result of low cycle fatigue having initiated from possible sharp edges occurring during manufacture of the oil hole for the thin lug. New, higher strength parts with potentially superior fatigue life are being developed by Chadwick, Inc. Parts will be available from Chadwick, Inc., after approval has been granted through revision to the supplemental type design data of STC's SH149WE and SH17NW.

Since this condition is likely to exist in other Bell Helicopter models 204B, 205A, 205A-1, and 212, modified by Chadwick, Inc., STC's SH149WE or SH17NW, the AD has been issued and is now published in the FEDERAL REGISTER, requiring restricted operation until the original load cell link assembly is replaced with a different, FAA-approved part.

Since a situation existed that required immediate adoption of this regulation, it is found that notice and public procedure thereon were impracticable and good cause existed at the time of issuance, and still exists, for making this amendment effective in less than 30 days.

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, section 39.13 of the Federal Aviation Regulations (14 CFR 39.13) is amended by adding the following new Airworthiness Directive: Bell: Applies to all Bell Helicopter models 204B, 205A, 205A-1, and 212 modified by Chadwick, Inc., STC's SH149WE or SH17NW.

Prior to further flight involving external-load operations over congested or densely populated areas, replace Chadwick, Inc., load cell link assembly P/N 47-40200-19 with parts approved by the Chief, Engineering and Manufacturing Branch, Federal Aviation Administration, Northwest Region. This amendment is effective October 12, 1978, and was effective earlier for all recipients of the airmail letter dated September 18, 1978, which contained this amendment.

(Secs. 313(a), 601, and 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, and 1423) and section 6(c) of the Department of Transportation Act (49 U.S.C. 1655(c); and 14 CFR 11.89).)

NOTE.—The FAA has determined that this document involves a regulation which is not considered to be significant under the procedures and criteria prescribed by Executive Order 12044 and as implemented by interim Department of Transportation guidelines (43 FR 9582; Mar. 8, 1973).

Issued in Seattle, Wash., on October 6, 1978.

C. B. WALK, Jr.,
Director,
Northwest Region.

[FR Doc. 78-29226 Filed 10-18-78; 8:45 am]

[4910-13-M]

[Docket No. 78-SO-33; Amendment 39-3316]

PART 39—AIRWORTHINESS DIRECTIVES

Piper Model PA-34-200T Series Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes an existing airworthiness directive (AD) applicable to Piper Aircraft Corp. model PA-34-200T airplanes. This amendment requires inspection and replacement, as necessary, of certain fuel lines. It also requires installation, if necessary, of clamps in the left nacelle and installation of protective sleeves in the right nacelle, on certain Piper model PA-34-200T series airplanes. The AD is needed to prevent chafing between control cables and fuel lines which could result in fuel leakage. The change is necessary based on additional field reports.

DATES: Effective date: October 26, 1978. Compliance schedule—as prescribed in the body of AD.

ADDRESSES: Copies of Piper Service Bulletin 596A may be obtained from Piper Aircraft Corp., 820 East Bald Eagle Street, Lockhaven, Pa. 17745. A copy of Service Bulletin 596A is contained in the Rules Docket, Room 264, Federal Aviation Administration, Southern Region, 3400 Whipple Street, East Point, Ga.

FOR FURTHER INFORMATION CONTACT:

Gil Carter, Engineering and Manufacturing Branch, Flight Standards Division, Federal Aviation Administration, 3400 Whipple Street, East Point, Ga. 30344, telephone 404-763-7435.

SUPPLEMENTARY INFORMATION: This amendment supersedes amendment 39-3222, 43 FR 22341, AD 78-11-04, which currently requires inspection and corrective action for a fuel line and control cable interference in the right nacelle on Piper model PA-34-200T airplanes. After issuing amendment 39-3222, the FAA has determined, based on service experience, that a fuel line and control cable in the left nacelle may be chafing. It is necessary that the fuel line and control cable in the left nacelle also be inspected and replaced or secured as necessary. Therefore, the FAA is superseding amendment 39-3222 by adding an additional inspection and requiring corrective action as necessary.

Since a situation exists that requires immediate adoption of this regulation, it is found that notice and public procedure hereon are impracticable and good cause exists for making this amendment effective in less than 30 days.

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of part 39 of the Federal Aviation Regulation (14 CFR 39.13) is amended by adding the following new airworthiness directive:

PIPER AIRCRAFT CORP. Applies to model PA-34-200T, serial Nos. 34-7570001 through 34-7870207, certificated in all categories.

Compliance is required within the next 10 hours' time in service after the effective date of this AD unless already accomplished.

To prevent a fuel leak, accomplish the following:

(a) On serial Nos. 34-7570001 through 34-7870194, accomplish the following:

(1) Remove the right and left engine nacelle aft hatch assemblies.

(2) In the right engine aft nacelle compartment, inspect the fuel inlet line to the boost pump at the mixture control cable for evidence of chafing.

(i) If chafing is evident, replace the fuel line with the approved fuel line, Piper part No. 95153-145. Install protective sleeves, Piper part Nos. 63882-73 and 63882-83, or equivalent fuel resistant flexible sleeves on the fuel inlet line and the mixture control cable. Secure the sleeves in place with tie raps, Piper part No. 488-702 or equivalent fuel resistant devices (see fig. No. 1). Leak check the fuel line using normal maintenance procedures.

(ii) If no chafing is evident, remove existing clamps or Koroseal tie (if installed) and install protective sleeves, Piper part Nos. 63882-73 and 63882-83, or equivalent fuel resistant flexible sleeves on the fuel inlet line and the mixture control cable. Secure the sleeves in place with tie raps, Piper part No. 488-702, or equivalent fuel resistant devices (see fig. No. 1).

(3) In the left engine aft nacelle compartment, inspect the fuel inlet line to the boost pump at the propeller governor control cable for evidence of chafing.

(i) If chafing is evident, replace the fuel line with the approved fuel line, Piper part No. 95153-144. Secure the fuel line to the control cable as shown in figure No. 2. Leak check the fuel line using normal maintenance procedures.

(ii) If no chafing is evident, unless already accomplished, secure the fuel line to the control cable as shown in figure No. 2.

(4) Replace the right and left engine nacelle aft hatch assemblies and make appropriate maintenance record entry.

(b) On serial Nos. 34-7870195 through 34-7870207, accomplish the following:

(1) Remove the right engine nacelle aft hatch assembly.

(2) Inspect the fuel inlet line to the boost pump at the mixture control cable for evidence of chafing.

(i) If chafing is evident, replace the fuel line with the approved fuel line, Piper part No. 95153-145. Install protective sleeves, Piper part Nos. 63882-73 and 63882-83, or equivalent fuel resistant flexible sleeves on the fuel inlet line and the mixture control cable. Secure the sleeves in place with tie raps, Piper part No. 488-702 or equivalent fuel resistant devices (see fig. No. 1). Leak check the fuel line using normal maintenance procedures.

(ii) If no chafing is evident, remove existing clamps or Koroseal tie (if installed) and install protective sleeves, Piper part Nos. 63882-73 and 63882-83, or equivalent fuel resistant flexible sleeves on the fuel inlet line and the mixture control cable. Secure the sleeves in place with tie raps, Piper part No. 488-702, or equivalent fuel resistant devices (see fig. No. 1).

(3) Replace the right nacelle aft hatch assembly and make appropriate maintenance record entry.

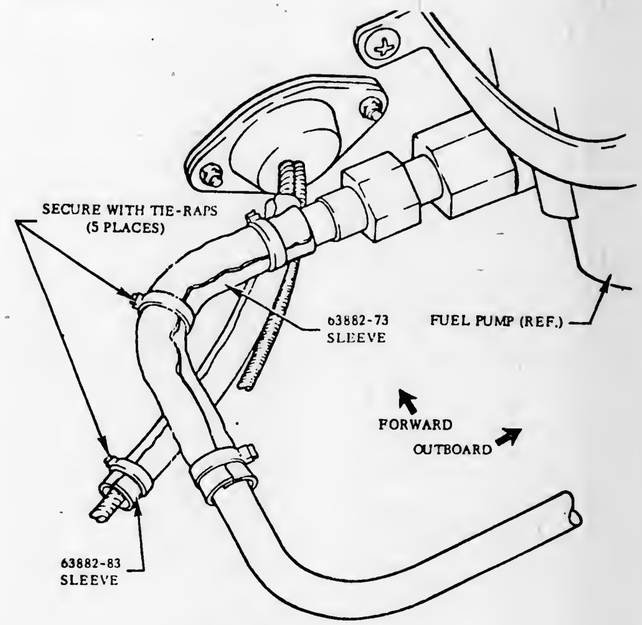

FIGURE 1.—*Right engine nacelle.*

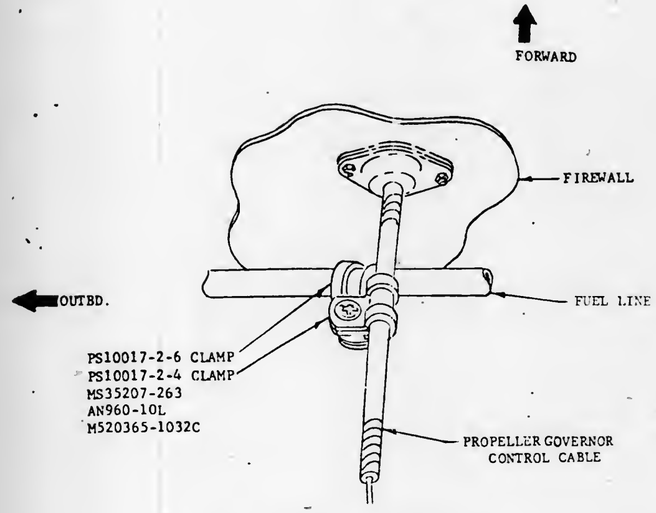

FIGURE 2.—*Left engine nacelle.*

(c) An alternate method of compliance may be approved by the Chief, Engineering and Manufacturing Branch, Federal Aviation Administration, Southern Region.

FOR FURTHER INFORMATION CONTACT:

D. C. Jacobsen, Chief, Aircraft Certification Staff, AEU-100, Europe

the last flight of each day in which the helicopter is operated.

[Docket No. 17932; Amdt. 39-3319]

PART 39—AIRWORTHINESS DIRECTIVES

Societe Nationale Industrielle Aerospatiale Model SA 330 Puma Helicopters

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This amendment adopts a new airworthiness directive (AD) which requires inspection and replacement or modification, as appropriate, of the yaw control lever bellcrank on certain Societe Nationale Industrielle Aerospatiale (SNIAS) model SA 330 Puma helicopters. The AD is needed to prevent cracking of the bellcrank which could result in the loss of control of the helicopter.

DATE: Effective—November 20, 1978. Compliance schedule—as prescribed in body of AD. The applicable service bulletins may be obtained from: Societe Nationale Industrielle Aerospatiale, Division Helicopters, Service Technique Apres-Vente, Boite Postale 13, 13722 Marignane, France. Copies of the service bulletins are contained in the Rules Docket, Room 916, 800 Independence Avenue SW., Washington, D.C. 20591.

FOR FURTHER INFORMATION CONTACT:

D. C. Jacobsen, Chief, Aircraft Certification Staff, AEU-100, Europe, Africa, and Middle East Region, Federal Aviation Administration, Brussels, Belgium, telephone 513.38.30.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an AD requiring inspections and replacement or modification, as appropriate, of yaw control lever bellcrank on certain SNIAS model SA 330 Puma helicopters was published in the FEDERAL REGISTER at 43 FR 24847, on June 8, 1978. The proposal was prompted by the FAA's determination that the support bellcrank, P/N 330A.77.4011.01, of SNIAS model SA 330 Puma helicopters have been susceptible to cracking in the area of attachment to the yaw control lever. If uncorrected, such cracking could result in failure of the bellcrank and loss of yaw control.

Interested persons have been afforded an opportunity to participate in the making of the amendment. No objections were received. Accordingly, the proposal is adopted without change.

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, § 39.13 of part 39 of the Federal Aviation Regulation (14 CFR 39.13) is amended by adding the following new airworthiness directive:

SOCIETE NATIONALE INDUSTRIELLE AEROSPATIALE (SNIAS). Applies to model SA 330 Puma helicopters, S/N 1504 and below, certificated in all categories, having yaw control bellcranks P/N 330A.77.4011.01 that have been modified in accordance with SNIAS modification AMS 07.10.226 but not modified in accordance with AMS 07.11.890.

Compliance is required as indicated, unless already accomplished.

To prevent possible failure of the yaw control bellcrank, P/N 330A.77.4011.01, accomplish the following:

(a) Within the next 25 hours time in service after the effective date of this AD, or prior to the accumulation of 1,200 hours total time in service, whichever occurs later, inspect the tubular section of the yaw control bellcrank P/N 330A.77.4011.01, for cracks in accordance with Puma SA 330 Service Bulletin No. 05.50, dated March 22, 1977, or an FAA-approved equivalent.

(b) If during any inspection required by this AD a cracked bellcrank is found, replace the bellcrank with a serviceable part of the same part number.

(c) After the initial inspection required by paragraph (a) of this AD, continue to inspect all yaw control bellcranks, and all replacements that have accumulated 1,200 or more hours total time in service, in accordance with paragraph (a) of this AD after the last flight of each day in which the helicopter is operated.

(d) The repetitive inspections required by paragraph (c) of this AD may be discontinued upon the incorporation of a serviceable bellcrank, P/N 330A.77.4011.01, that has been modified in accordance with Puma SA 330 Service Bulletin No. 67.10, dated March 22, 1977, or an FAA-approved equivalent.

NOTE.—The modification covered in Service Bulletin No. 67.10 corresponds to Puma modification AMS 07.11.890.

This amendment becomes effective November 20, 1978.

(Secs. 313(a), 601, 603, Federal Aviation Act of 1958, as amended (49 U.S.C. 1354(a), 1421, 1423); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); 14 CFR 11.89).)

Issued in Washington, D.C., on October 6, 1978.

J. A. FERRARESE,
Acting Director,
Flight Standards Service.

[Airspace Docket No. 78-CE-16]

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW POINT ROUTES, CONTROLLED AIRSPACE AND REPORTING POINTS

Alteration of Control Zone and Transition Area at Topeka, Kans.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of this amendment is to alter the control zone and 700-foot transition area at Topeka, Kans., by changing the name from Forbes Air Force Base to Forbes Field Airport and to provide additional controlled airspace for aircraft executing a new instrument approach procedure to the Forbes Field Airport, Topeka, Kans., utilizing an existing nondirectional radio beacon (NDB) navigational aid.

EFFECTIVE DATE: December 28, 1978.

FOR FURTHER INFORMATION CONTACT:

Gary W. Tucker, Airspace Specialist, Operations, Procedures and Airspace Branch, Air Traffic Division, ACE-538, FAA, Central Region, 601 East 12th Street, Kansas City, Mo. 64106, telephone 816-374-3408.

SUPPLEMENTARY INFORMATION: The purpose of this amendment to Subpart F, § 71.171 of the Federal Aviation regulations (14 CFR 71.171) and Subpart G, § 71.181 of the Federal Aviation regulations (14 CFR 71.181) is to alter the control zone and 700-foot transition area at Topeka, Kans. The city of Topeka, Kans., has assumed operation and control of Forbes Air Force Base and has changed the name of the airport to Forbes Field Airport. To enhance airport usage by providing additional instrument approach capability to the Forbes Field Airport, the city of Topeka, Kans., has requested a new instrument approach procedure utilizing the existing Richland NDB. The establishment of an instrument approach procedure based on this navigational aid entails alteration of the control zone and transition area at Topeka, Kans., at and above 700 feet above ground level (AGL) within which aircraft are provided additional air traffic control service. The intended effect of this action is to insure segregation of aircraft using the new approach procedure under instrument flight rules (IFR) and other air craft operating under visual flights rules (VFR).

DISCUSSION OF COMMENTS

On pages 30571 and 30572 of the FEDERAL REGISTER dated July 17, 1978, the Federal Aviation Administration published a Notice of Proposed Rule Making which would amend §§ 71.171 and 71.181 of part 71 of the Federal Aviation regulations so as to alter the control zone and transition area at Topeka, Kans. Interested persons were invited to participate in this rule making proceeding by submitting written comments on the proposal to the FAA. No objections were received as a result of the Notice of Proposed Rule Making.

Accordingly, the Federal Aviation Administration proposes to amend Subpart F, § 71.171 of the Federal Aviation regulations (14 CFR 71.171) as republished on January 3, 1978 (43 FR 355), is amended effective 0901 G.m.t. December 28, 1978, by altering the following control zone:

FORBES FIELD

Within a 5-mile radius of Forbes Field Airport (latitude 38°57'06"N, longitude 95°39'45"W) within 2.5 miles each side of the Forbes Field LOM 317° bearing extending from the 5-mile radius zone to 6 miles northwest of the airport, and within 2 miles each side of the Forbes Field ILS localizer SE course extending from the 5-mile radius zone to 1 mile SE of the LOM, excluding the portion subtended by a chord drawn between the points of intersection of the 5-mile radius zone with the Philip Billard Airport, Topeka, Kans., control zone. This control zone will be effective as established by a Notice to Airmen or published in the Airman's Information Manual.

Additionally, Subpart G, § 71.181, of the Federal Aviation regulations (14 CFR 71.181) as republished on January 3, 1978, (43 FR 440), is amended effective 0901 G.m.t. December 28, 1978, by altering the following transition area:

TOPEKA, KANS.

That airspace extending upward from 700 feet above the surface within a 7-mile radius of Philip Billard Airport, Topeka, Kans. (Latitude 39°04'09"N, longitude 95°37'18"W) within 2 miles each side of the Topeka VORTAC 039° radial extending from the 7-mile radius area to 8 miles northeast of the VORTAC, within 5 miles southwest and 8 miles northeast of the Philip Billard Airport ILS localizer northwest course extending from 3 miles southeast to 12 miles northwest of the Billard LOM, within an 8.5-mile radius of Forbes Field Airport, Topeka, Kans. (latitude 38°57'06"N, longitude 95°39'45"W) within 4 miles each side of the Forbes Field LOM 317° bearing extending from the 8.5-mile radius area to 15 miles northwest of the airport, and within 3.5 miles each side of the Forbes Field ILS localizer southeast course extending from the 8.5-mile radius area to 8 miles southeast of the Forbes Field LOM.

(Sec. 307(a), Federal Aviation Act of 1958 as amended (49 U.S.C. 1348); sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); § 11.61 Federal Aviation regulations (14 CFR 11.61).)

NOTE.—The Federal Aviation Administration has determined that this document does not contain a major proposal requiring preparation of an Economic Impact Statement under Executive order 11821, as amended by Executive Order 11949, and OMB Circular A-107.

Issued in Kansas City, Mo., on October 6, 1978.

JOHN E. SHAW,
Acting Director, Central Region.

[Airspace Docket No. 78-ASW-34]

PART 71—DESIGNATION OF FEDERAL AIRWAYS, AREA LOW ROUTES, CONTROLLED AIRSPACE, AND REPORTING POINTS

Alteration of Transition Area: Sherman, Tex.

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The nature of the action being taken is to alter the transition area at Sherman, Tex. The intended effect of the action is to provide additional controlled airspace for aircraft executing instrument approach procedures to the Grayson County Airport. The circumstance which created the need for the action is that higher performance aircraft are utilizing the airport requiring additional controlled airspace for their protection.

EFFECTIVE DATE: December 28, 1978.

FOR FURTHER INFORMATION CONTACT:

David Gonzalez, Airspace and Procedures Branch (ASW-536), Air Traffic Division, Southwest Region, Federal Aviation Administration, P.O. Box 1689, Fort Worth, Tex. 76101, telephone 817-624-4911, extension 302.

SUPPLEMENTARY INFORMATION:

HISTORY

On August 3, 1978, a notice of proposed rulemaking was published in the FEDERAL REGISTER (43 FR 34158) stating that the Federal Aviation Administration proposed to alter the Sherman, Tex., transition area. Interested persons were invited to participate in this rulemaking proceeding by submitting written comments on the proposal to the Federal Aviation Administration. Comments were received without objections. Except for editorial changes this amendment is that proposed in the notice.

THE RULE

This amendment to subpart G of part 71 of the Federal Aviation Regulations (14 CFR 71) alters the Sherman, Tex., transition area. This action provides additional controlled airspace from 700 feet above the ground for the protection of aircraft executing instrument procedures established for the Grayson County Airport.

ADOPTION OF THE AMENDMENT

Accordingly, pursuant to the authority delegated to me by the Administrator, subpart G of part 71 of the Federal Aviation Regulations (14 CFR Part 71) as republished (43 FR 440) is amended, effective 0901 G.m.t., December 28, 1978, as follows:

In subpart G, 71.181 (43 FR 440), the Sherman, Tex., transition area is amended as follows:

That airspace extending from 700 feet above the surface within a 6-mile radius of Sherman Municipal Airport (latitude 33°37'30" N., longitude 96°35'00" W.) and within an 8.5-mile radius of Grayson County Airport (latitude 33°42'55" N., longitude 96°40'25" W.).

(Sec. 307(a), Federal Aviation Act of 1958 (49 U.S.C. 1348(a); and sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)).)

NOTE.—The FAA has determined that this document involves a proposed regulation which is not considered to be significant under the procedures and criteria prescribed by Executive Order 12044 and as imple-

1978; respondents having been served by mail with the said opinion and order on July 19, 1978; respondents having petitioned for reconsideration of said opinion and order on August

EFFECTIVE DATE: October 19, 1978.

ADDRESS: Rules Docket Clerk, Office of General Counsel, Room 5218, Department of Housing and Urban

(Sec. 7(d), Department of HUD Act (42 U.S.C. 3535(d)).)

Issued at Washington, D.C., October 12, 1978

V 43 / 203 OCT 1978

NOTE.—The FAA has determined that this document involves a proposed regulation which is not considered to be significant under the procedures and criteria prescribed by Executive Order 12044 and as implemented by interim Department of Transportation guidelines (43 FR 9582; March 3, 1978).

Issued in Fort Worth, Tex., on October 4, 1978.

PAUL J. BAKER,
Acting Director, Southwest Region.

Title 16—Commercial Practices

CHAPTER I—FEDERAL TRADE COMMISSION

[D. 9057-0]

PART 13—PROHIBITED TRADE PRACTICES AND AFFIRMATIVE CORRECTIVE ACTIONS

USLIFE Credit Corp. et al.

AGENCY: Federal Trade Commission.

ACTION: Modification of order to cease and desist.

SUMMARY: This order, granting and denying in part respondents' petition for reconsideration, modifies the final order issued on May 23, 1978, 43 FR 34124, by deleting from the first line of paragraph 2 the word "Failing," and inserting the word "Failing" as the first word of subpargraph (a) of paragraph 2.

DATES: Decision issued May 23, 1978; modifying order issued September 14, 1978.[1]

FOR FURTHER INFORMATION CONTACT:

FTC/P, Albert H. Kramer, Washington, D.C., 202-523-3727.

SUPPLEMENTARY INFORMATION: In the matter of USLIFE Credit Corp., a corporation, and USLIFE Corp., a corporation. The prohibited trade practices and/or corrective actions, as codified under 16 CFR Part 13, appears at 43 FR 34124, and remains unchanged.

(Sec. 6, 38 State. 721; 15 U.S.C. 46. Interpret or apply sec. 5, 38 Stat. 719, as amended; 82 Stat. 146, 147 (15 U.S.C. 45, 1601, et seq.).)

The order modifying order to cease and desist, is as follows:

ORDER GRANTING IN PART, AND DENYING IN PART, RESPONDENTS' PETITION FOR RECONSIDERATION

An opinion and final order in this matter having been issued on May 23, 1978; respondents having been served by mail with the said opinion and order on July 19, 1978; respondents having petitioned for reconsideration of said opinion and order on August 10, 1978; and the Commission, for the reasons stated in the accompanying opinion, having determined to grant in part, and deny in part, respondents' petition for reconsideration;

It is ordered, That the final order to cease and desist be, and hereby is, modified as follows:

From the first line of paragraph 2 of the order, delete the word "Failing."

In subparagraph (a) of paragraph 2 of the order, insert as the first word thereof the word "Failing."

By the Commission, Commissioner Pitofsky not participating.

CAROL M. THOMAS,
Secretary.

Title 24—Housing and Urban Development

CHAPTER VIII—LOW INCOME HOUSING, DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. R-78-517]

PART 888—SECTION 8 HOUSING ASSISTANCE PAYMENTS PROGRAM—FAIR MARKET RENTS AND CONTRACT RENT AUTOMATIC ANNUAL ADJUSTMENT FACTORS

Fair Market Rents for New Construction and Substantial Rehabilitation

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Final rule.

SUMMARY: Notice was given on March 31, 1978, at 43 FR 13758 that HUD was proposing to amend title 24 of the Code of Federal Regulations by incorporating in part 888, subpart A, a revised schedule A, "Fair Market Rents for New Construction and Substantial Rehabilitation (including Housing Finance and Development Agencies Program)" for all market areas. The final rule was published on June 13, 1978, at 43 FR 25604. The final rule stated that comments received in response to the March 31, 1978 publication, received after April 14, 1978, would be carefully considered and additional amendments would be published at a later date if appropriate. The additions and amendments set forth below respond to comments received since April 14, 1978.

EFFECTIVE DATE: October 19, 1978.

ADDRESS: Rules Docket Clerk, Office of General Counsel, Room 5218, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, D.C. 20410, 202-755-7603. This is not a toll-free number.

FOR FURTHER INFORMATION CONTACT:

Henry F. P. Cassagne, Chief Appraiser, Office of Technical Support, Department of Housing and Urban Development, 451 Seventh Street SW., Washington, D.C. 20410, 202-472-4810. This is not a toll-free number.

SUPPLEMENTARY INFORMATION: This final rule adds fair market rents (FMR's) for three- and four-bedroom units in elevator buildings of five or more stories for the Boston, Mass., market area; adds FMR's for zero-, one-, and two-bedroom units in elevator buildings of two through four stories for the Augusta, Bangor, Brunswick, Calais, Lewiston, Portland, and Waterville, Maine, market areas; adds FMR's for three- and four-bedroom units in elevator buildings of two through four stories and five or more stories for the Newark, Asbury Park, North Bergen, and Freehold, N.J., market areas; amends the FMR's for zero-, one-, and two-bedroom units in elevator buildings of five or more stories for the Philadelphia, Pa., market areas; amends the FMR's for one- and two-bedroom units in elevator buildings of five or more stories for the Washington, D.C., market area; amends the fair market rents for the Greensboro, Asheville, Charlotte, Durham, Greenville, Raleigh, Winston-Salem, Fayetteville, and Wilmington, N.C., market areas; amends the zero-, one-, and two-bedroom FMR's for elevator buildings of two through four stories and five or more stories for the Benton Harbor, Mich., market area; amends the fair market rents for the Fayetteville, Little Rock, Texarkana, Fort Smith, and Jonesboro, Ark., market areas; and adds fair market rents for the Pendleton, Oreg., market area.

The complete schedule for each affected market area is set forth so all rents for that area may be found in one place.

A finding of inapplicability respecting the National Environmental Policy Act of 1969 has been made in accordance with HUD procedures. A copy of this finding of inapplicability is available for public inspection during regular business hours at the Office of the Rules Docket Clerk at the address set forth above.

Accordingly schedule A of part 888 is amended as set forth below:

[1] Copies of the modifying order with opinion filed with the original document.

(Sec. 7(d), Department of HUD Act (42 U.S.C. 3535(d)).)

Issued at Washington, D.C., October 12, 1978.

LAWRENCE B. SIMONS,
Assistant Secretary for Housing—Federal Housing Commissioner.

SCHEDULE A—FAIR MARKET RENTS FOR NEW CONSTRUCTION AND SUBSTANTIAL REHABILITATION (INCLUDING HOUSING FINANCE AND DEVELOPMENT AGENCIES PROGRAM)

These fair market rents have been trended ahead 2 years to allow time for processing and construction of proposed new construction and substantial rehabilitation rental projects.

NOTE.—The fair market rents for (1) dwelling units designed for the elderly or handicapped are those for the appropriate size units, not to exceed two bedrooms, multiplied by 1.05 rounded to the next higher whole dollar, (2) congregate housing dwelling units are the same as for noncongregate units, and (3) single room occupancy dwelling units are those for zero-bedroom units of the same type.

Title 36—Parks, Forests, and Public Property

CHAPTER IX—PENNSYLVANIA AVENUE DEVELOPMENT CORPORATION

PART 905—STANDARDS OF CONDUCT

Interim Rule; Request for Comments

AGENCY: Pennsylvania Avenue Development Corporation.

ACTION: Interim rule; request for comments.

SUMMARY: The Pennsylvania Avenue Development Corporation is proposing to formally adopt Standards of Conduct governing the conduct of its employees and special government employees. The Corporation has now entered the implementation phase of its development program for Pennsylvania Avenue in Washington, D.C. This phase will bring mounting pressures to bear upon the staff of the Corporation as development proceeds. Therefore, the need to formalize internal agency policy on standards of conduct is of the utmost importance. While giving formal notice to the public of the Corporation's policy on conflicts of interest, it also provides the staff of the Corporation with clear guidelines to which they can refer when necessary.

DATES: Effective date: October 19, 1978. Comment date: Comments must be received on or before November 17, 1978.

ADDRESS: Send comments to Peter T. Meszoly, General Counsel, Pennsylvania Avenue Development Corporation, 425 13th Street NW., Suite 1148, Washington, D.C. 20004, 202-566-1078.

FOR FURTHER INFORMATION CONTACT:

David W. Briggs, Attorney, Office of the General Counsel, 202-566-1078.

SUPPLEMENTARY INFORMATION: The proposed standards of conduct implement Executive Order 11222 and Title 5, Code of Federal Regulations, Part 735, Regulations Concerning Employee Responsibilities and Conduct as promulgated by the U.S. Civil Service Commission. The standards apply to both regular Government employees of the Corporation and its special Government employees, including part-time consultants and members of the Corporation's Board of Directors.

The proposed part sets forth general standards of conduct for all employees of the Corporation, and specifies conduct which is considered unacceptable, covering such areas as gifts, outside employment, and disclosures of confidential information relating to development projects. An ethics counselor is designated under the part and the role of the counselor as an advisor to the Corporation on ethics is defined. Reporting requirements applicable to certain Corporation staff is set forth.

Although these standards of conduct are published as interim rules, comments are requested. Following review of any submitted comments and final approval of these standards by the U.S. Civil Service Commission, the standards, as revised, will be published as final rulemaking.

36 CFR, Chapter IX, is amended by adding a new Part 905—Standards of Conduct to read as follows:

Subpart A—General Provisions

Sec.
905.735-101 Principles and purpose.
905.735-102 Adoption of regulations.
905.735-103 Definitions.
905.735-104 Applicability.
905.735-105 Designation of counselor.
905.735-106 Notification to employees and special Government employees.
905.735-107 Review of statements of employment and financial interests.
905.735-108 Remedial and disciplinary action.

Subpart B—Conduct and Responsibilities of Employees

905.735-201 General standards of conduct.
905.735-202 Gifts, entertainment, and favors.
905.735-203 Outside employment and other activity.
905.735-204 Disclosure of information.
905.735-205 Purchase of Government-owned property.

Subpart C—Conduct and Responsibilities of Special Government Employees

905.735-301 General standards of conduct.

Subpart D—Special Standards Applicable to Certain Board Members

905.735-401 Standards.
905.735-402 Advice and determination.

Subpart E—Statements of Employment and Financial Interests

905.735-501 Form and content of statements.
905.735-502 Statements of employment and financial interests by employees.
905.735-503 Statements of employment and financial interests by special Government employees.
905.735-504 Procedures for obtaining statements.
905.735-505 Confidentiality of statements.

AUTHORITY: E.O. 11222, 3 CFR, 1964-1965 Comp., p. 306; 5 CFR 735; section 6(5), Pub. L. 92-578, 86 Stat. 1270 (40 U.S.C. 875).

Subpart A—General Provisions

§ 905.735-101 Principles and purpose.

In order to assure that the business of the Pennsylvania Avenue Development Corporation is conducted effectively, objectively, and without improper influence or appearance thereof, all employees and special Government employees must observe unquestionable standards of integrity and conduct. Employees and special Government employees shall not engage in criminal, infamous, dishonest, immoral, or disgraceful conduct or other conduct prejudicial to the Government. All employees and special Government employees must avoid conflicts of private interest with their public duties and responsibilities. They must consider the propriety of any action in relation to general ethical standards of the highest order, so that public confidence in the integrity of the Government will not be impaired. Certain standards are set by law. Others are set by regulation and by policy. This part incorporates by reference applicable general standards of conduct and prescribes additional necessary elements. Taken together, this part constitutes the Corporation's regulations on this subject. Failure to observe any of the regulations in this part is cause for remedial action.

§ 905.735-102 Adoption of regulations.

Under the authority of 5 CFR 735.104(f), the Corporation hereby adopts the following sections of the Civil Service Commission regulations on "Employee Responsibilities and Conduct" found in Part 735 of Title 5, Code of Federal Regulations: § 735.202(a), (d), (e), (f) through 735.210; 735.302; 735.303(a); 735.304; 735.305(a); 735.306; 735.404 through 735.411; and, 735.412(b) and (d). These sections are incorporated by reference in this part and are modified and supplemented as set forth herein.

§ 905.735-103 Definitions.

As used in this part:

(a) "Board Member" means any member of the Board of Directors of the Pennsylvania Avenue Development Corporation, appointed or serving under section 3, Pub. L. 92-578, 86 Stat. 1267 (40 U.S.C. 872).

(b) "Chairman" means the Chairman of the Board of Directors and President of the Corporation.

(c) "Conflict" means the subordination of public responsibilities to private interests, and includes the appearance of such subordination.

(d) "Consultant" means an individual who serves as an advisor to an officer or division of the Corporation, as distinguished from an officer or employee who carries out the agency's duties and responsibilities. He gives

his views or opinions on problems or questions presented him by the Corporation, but he neither performs nor supervises performance of operating

legislative branches of the United States or the District of Columbia.

§ 905.735-104 Applicability.

§ 905.735-108 Remedial and disciplinary action.

(a) In addition to any penalties pre-

§ 905.735-202 Gifts, entertainment, and favors.

Pursuant to paragraph (b) of 5 CFR

§ 905.735-204 Disclosure of information.

(a) Every employee who is involved in the development, maintenance or

or more fields of history, architecture, city planning, retailing, real estate, construction or government." As a

V 4 3 / 2 0 3

0 C 1 9 7 8

his views or opinions on problems or questions presented him by the Corporation, but he neither performs nor supervises performance of operating functions. Ordinarily, he is expert in the field in which he advises, but he need not be a specialist. His expertness may lie in his possession of a high order of board administrative, professional, or technical experience indicating that his ability and knowledge make his advice distinctively valuable to the agency. (Chapter 304, Federal Personnel Manual).

(e) "Corporation" means the Pennsylvania Avenue Development Corporation, created by the Pennsylvania Avenue Development Corporation Act of 1972, Pub. L. 92-578, 86 Stat. 1266 (40 U.S.C. 871).

(f) "Employee" means an officer or employee of the Corporation, but does not include a special Government employee as defined herein. The term includes those Board Members who are officers or employees of the executive or legislative branches of the United States or of the District of Columbia, but does not include elected officials.

(g) "Executive Order" means Executive Order 11222 of May 8, 1965.

(h) "Expert" means a person with excellent qualifications and a high degree of attainment in a professional, scientific, technical, or other field. His knowledge and mastery of the principles, practices, problems, methods, and techniques of his field of activity, or of a specialized area in the field, are clearly superior to those usually possessed by ordinarily competent individuals in that activity. His attainment is such that he usually is regarded as an authority or as a practitioner of unusual competence and skill by other persons in the profession, occupation, or activity. (Chapter 304, Federal Personnel Manual.)

(i) "Head of the agency" means the Chairman.

(j) "Person" means an individual, a corporation, a company, an association, a firm, a partnership, a society, a joint stock company, or any other institution or organization.

(k) "Special Government Employee" means an officer or employee of the Corporation who is retained, designated, appointed or employed to perform, with or without compensation, for not more than 130 days during any period of 365 consecutive days, temporary duties either on a full time or intermittent basis (18 U.S.C. 202(a)). The term includes those Board Members who are appointed from private life and required to file a statement of financial interests with the Chairman of the Civil Service Commission pursuant to Part IV of the Executive Order, or who are determined to be special government employees of the executive or legislative branches of the United States or the District of Columbia.

§ 905.735–104 Applicability.

This part applies to each employee and to each special Government employee of the Corporation as defined herein and supplements the Executive Order and Part 735 of Title 5, Code of Federal Regulations, promulgated by the Civil Service Commission on employee responsibilities and conduct.

§ 905.735–105 Designation of counselor.

In accordance with 5 CFR 735.105(a), the General Counsel of the Corporation is designated to be Ethics Counselor and shall serve as the Corporation's liaison with the Civil Service Commission for matters covered in this part.

§ 905.735–106 Notification to employees and special Government employees.

(a) At the time these regulations are published, or amended, and not less often than once annually thereafter, the Corporation shall furnish each employee and special Government employees with a copy of the regulations. The Administrative Officer shall insure that each newly hired employee and special Government employee is given a copy of these regulations prior to or at the time of entry on duty.

(b) All employees and special Government employees will be advised by the Corporation of the availability of counseling regarding the provisions of this part.

§ 905.735–107 Review of statements of employment and financial interests.

The Ethics Counselor of the Corporation shall review each statement of employment and financial interests submitted under §§ 905.735–402 or 905.735–403, except his own and those statements of special Government employees who file with the Chairman of the Civil Service Commission. When review discloses a conflict between the interests of an employee or special Government employee of the Corporation and the performance of his services for the Corporation, the Ethics Counselor shall bring the conflict to the attention of the employee or special Government employee, grant the individual an opportunity to explain the conflict, and attempt to resolve it. If the conflict cannot be resolved, the Ethics Counselor shall forward a written report on the conflict to the Chairman, recommending appropriate action. The Chairman shall review the report, solicit an explanation from the individual, and seek resolution of the conflict.

§ 905.735–108 Remedial and disciplinary action.

(a) In addition to any penalties prescribed by law, the Chairman, after review and consideration of any explanation given by an employee or special Government employee concerning a conflict of interest, may institute appropriate remedial action to resolve or otherwise eliminate the conflict. Appropriate remedial action may include, but is not limited to:

(1) Divestment by the employee or the special Government employee of the conflicting interest;

(2) Disqualification of the individual from a particular assignment;

(3) Changes in the assigned duties of the individual; or,

(4) Disciplinary action.

(b) Where the situation warrants some form of disciplinary action, the Chairman may choose from a wide range including a warning or reprimand, suspension, reduction in grade or pay, or termination of employment. The disciplinary action selected should reflect the character and degree of the offense which demands such action and should be reasonable in light of that offense.

(c) Remedial action, whether disciplinary or otherwise, shall be effected in accordance with applicable laws, Executive Orders, and regulations.

Subpart B—Conduct and Responsibilities of Employees

§ 905.735–201 General standards of conduct.

(a) All employees shall conduct themselves on the job so as to efficiently discharge the work of the Corporation. Courtesy, consideration, and promptness are to be observed in dealing with the public, Congress, and other governmental agencies.

(b) All employees shall conduct themselves off the job so as not to reflect adversely upon the Corporation or the Federal service.

(c) Employee conduct shall exemplify the highest standards of integrity. Employees shall avoid any action, whether or not specifically prohibited by this part, which might result in, or create the appearance of:

(1) Using public office for private gain;

(2) Giving preferential treatment to any person;

(3) Impeding Government efficiency or economy;

(4) Losing complete independence or impartiality;

(5) Making a Government decision outside official channels; or

(6) Affecting adversely the confidence of the public in the integrity of the Government.

§ 905.735–202 Gifts, entertainment, and favors.

Pursuant to paragraph (b) of 5 CFR 735.202, the following exceptions to the restriction of paragraph (a) of that section are authorized. Employees may:

(a) Accept gifts and other things of value under circumstances which arise from an obvious family or personal relationship(s) (such as between the parents, children, or spouse of the employee and the employee), when the circumstances make it clear that it is those relationships rather than the business of the persons concerned which are the motivating factors;

(b) Accept food and refreshments of nominal value on infrequent occasions in the ordinary course of a luncheon, dinner, or other meeting, or on an inspection tour where an employee may properly be in attendance;

(c) Accept loans from banks or other financial institutions on customary terms to finance proper and usual activities of employees, such as home purchase;

(d) Accept unsolicited advertising or promotional materials, such as pens, pencils, note pads, calendars and other items of nominal intrinsic value;

(e) Participating without payment in privately funded activities in the Washington metropolitan area if: (1) An invitation is addressed to the Chairman or Executive Director of the Corporation and approved by either of them; (2) no provision for individual payment is readily available; and (3) the activities are limited to ceremonies of interest to both the local community and the Corporation (such as ground breakings or openings), or are sponsored or encouraged by the Federal or District Government as a matter of policy; and,

(f) Participate in widely attended lunches, dinners, and similar gatherings sponsored by industrial, commercial, technical and professional associations, or groups, for discussion of matters of interest both to the Corporation and the public. Participation by an employee at the host's expense is appropriate if the host is an association or group and not an individual.

§ 905.735–203 Outside employment and other activity.

As provided in 5 CFR 735.203, an employee of the Corporation may engage in outside employment or other outside activity not incompatible with the full and proper discharge of the duties and responsibilities of his Government employment. An employee who proposes to engage in outside employment shall report that fact in writing to his supervisor prior to undertaking such employment.

§ 905.735–204 Disclosure of information.

(a) Every employee who is involved in the development, maintenance or use of Corporation records containing information about individuals shall familiarize himself with the requirements and penalties of the Privacy Act of 1974 (5 U.S.C. 552a) and Corporation regulations (36 CFR Part 903) promulgated thereunder concerning the utilization of and access to such records.

(b) Every employee is directed to cooperate to the fullest extent possible in discharging the requirement of the Freedom of Information Act (5 U.S.C. 522) and Corporation regulations promulgated thereunder (36 CFR Part 902). Every effort should be made to furnish service with reasonable promptness to persons who seek access to Corporation records and information.

§ 905.735–205 Purchase of Government-owned property.

Employees of the Corporation and members of their immediate families may purchase Government-owned personal property when it is offered for sale by the General Services Administration or any Federal agency other than the Corporation (41 CFR 101–45.302).

Subpart C—Conduct and Responsibilities of Special Government Employees

§ 905.735.301 General standards of conduct.

(a) Special Government employees of the Corporation shall adhere to applicable regulations adopted under § 904.735–102, except 5 CFR 735.203(b). In addition, the standards of conduct set forth in §§ 905.735–201, 204, and 205 shall apply to special Government employees.

(b) Special Government employees of the Corporation may teach, lecture, or write consistent with the provisions of 5 CFR 735.203(c).

(c) Pursuant to 5 CFR 735.305(b), the provisions concerning gifts, entertainment, and favors set forth in § 905.735–202 are hereby made applicable to special Government employees.

Subpart D—Special Standards Applicable to Certain Board Members

§ 905.735–401 Standards.

Section 3(c)(8) of the Pennsylvania Avenue Development Corporation Act of 1972, Pub. L. 92-578, 86 Stat. 1267 (40 U.S.C. 872(c)(8)) specifies that the eight members appointed to the Board by the President from private life, at least four of whom shall be residents of the District of Columbia, "shall have knowledge and experience in one or more fields of history, architecture, city planning, retailing, real estate, construction or government." As a result of these prerequisites for appointment of a private member to the Board of Directors, conflicts could arise for these Board Members as the Corporation proceeds with various development activities. Accordingly, Board Members should perform their responsibilities for the operation and management of the Corporation consistent with these regulations, and other applicable Federal laws and regulations, and consistent with the highest level of fiduciary responsibility.

§ 905.735–402 Advice and determination.

The Corporation's Ethics Counselor is readily available for consultation when a Board Member seeks advice as to the appropriateness of his actions in light of this part, the Executive Order, or Title 18, United States Code, Chapter 11. A board Member has an affirmative duty to advise the Ethics Counselor of any potential conflict of interest which may arise with the individual's participation in any particular matter before the Corporation. If advised to do so, the Board Member should submit to the Chairman for determination the question of whether or not the conflict will disqualify the Board Member from participating in the action to be taken by the Corporation. Under the authority delegated to the Chairman pursuant to 18 U.S.C. 208(b), the Chairman may find that the Board Member need not be disqualified from participating in the particular matter, if: (a) The Board Member makes a full disclosure of the financial interest; and (b) the Chairman furnishes him with a written determination in advance of the action that the interest is not so substantial as to be deemed likely to affect the integrity of the services which the Government may expect from the Board Member. Requests for similar determinations for conflicts posed by the financial interests of the Chairman himself shall be submitted to the Chairman of the Civil Service Commission.

Subpart E—Statements of Employment and Financial Interests

§ 905.735–501 Form and content of statements.

Statements of employment and financial interests required to be submitted under this subpart by employees and special Government employees shall contain the information required in the formats prescribed by the Civil Service Commission in the Federal Personnel Manual.

§ 905.735–502 Statements of employment and financial interests by employees.

(a) Employees of the Corporation in the following named positions shall prepare and submit statements of employment and financial interests:

(1) Executive Director;

(2) Assistant Director/legal—General Counsel;

(3) Assistant Director/finance;

(4) Development Director;

(5) Secretary of the Corporation/administrative officer;

(6) Construction manager;

(7) Senior architect/planner;

(8) Chief, real estate operations;

(9) Any contracting officer of the Corporation; and,

(10) Any employee classified as a GS–13 or above whose duties and responsibilities are such that the ethics counselor determines a statement should be filed.

(b) Each statement of employment and financial interests required by this section, except that of the General Counsel, shall be submitted to the Ethics Counselor, Office of the General Counsel, Pennsylvania Avenue Development Corporation, 425 13th Street NW., Washington, D.C. 20004. The General Counsel, as Ethics Counselor, shall submit his statement directly to the Chairman for review.

(c) An employee who believes that his position has been improperly included in this section as one requiring the submission of a statement of employment and financial interests may obtain a review of this determination upon a written request to the Chairman.

§ 905.735–503 Statements of employment and financial interests by special Government employees.

All special Government employees shall submit a statement of employment and financial interest prior to beginning employment or service with the Corporation. Each statement shall be submitted to the Ethics Counselor, Office of the General Counsel, Pennsylvania Avenue Development Corporation, 425 13th Street, NW., Washington, D.C. 20004, except that the statements of Board Members appointed from private life shall be filed with the U.S. Civil Service Commission.

§ 905.735–504 Procedures for obtaining statements.

(a) Upon the adopting of the regulations of this part, the ethics counselor shall deliver to the incumbent of each position named in § 905.735–402 and to each special Government employee, two copies of the appropriate form for filing a statement of employment and financial interests. An enclosure with the forms shall advise that:

(1) The original of the completed form must be returned in a sealed envelope, marked "Personal—In Confidence," to the ethics counselor within the time specified by the ethics counselor;

(2) The services of the ethics counselor are available to advise and assist in preparation of the statement;

(3) Any additions or deletions to the information furnished must be reported in a supplementary statement at the end of the calendar quarter in which the change occurs; or in the case of a special Government employee, at the time the change occurs; and

(4) No later than June 30 of each year, all special Government employees and employees required to file under § 905.735–402(a) shall file an annual supplementary statement to update the information previously filed.

(b) The administrative officer shall be responsible for assuring that a completed statement of employment and financial interests is obtained from each special Government employee prior to the beginning of employment or service with the Corporation. The administrative officer shall promptly forward the statements to the ethics counselor for review.

§ 905.735–505 Confidentiality of statements.

The ethics counselor shall hold in confidence each statement of employment and financial interests, and each supplementary statement within his control. Access to or disclosure of information contained in these statements shall not be allowed, except as the Commission or the Ethics Counselor determine for good cause shown, consistent with the Privacy Act of 1974 (5 U.S.C. 552a), and the regulations and pertinent notices of systems of records prepared by the Civil Service Commission and the Corporation in accordance with that Act.

Issued in Washington, D.C., October 11, 1978.

E. R. QUESADA,
Chairman of the Board of Directors.

Title 39—Postal Service

CHAPTER I—U.S. POSTAL SERVICE

PART 111—GENERAL INFORMATION ON POSTAL SERVICE

Third-Class Bulk Rate Pieces Bearing Attachments

AGENCY: Postal Service.

ACTION: Final rule.

SUMMARY: This rule amends postal regulations to allow mailers under certain conditions to attach sales flyers or other such materials to the front cover page or back cover page of mailing pieces such as books and catalogs that are mailed at the bulk third-class postage rates. Prior to this rule change, mailers were not permitted to attach materials to books and catalogs mailed at bulk rates, since such materials tend, among other things, to jam mail processing machinery and create hazardous conditions on the workroom floor of post offices. To avoid these problems, the regulation specifies that attachments be secured so as not to interfere with processing or delivery, and folded or multipage attachments be secured to prevent opening during handling. In addition, the mailing piece and the attachment must be mailed at bulk rates and the higher rate must be paid if the mailing piece and the attachment are subject to different bulk rates. Pieces bearing attachments must be larger than 6 x 11 inches, i.e., too large to be distributed in a regular letter case, and the mailing must be presorted to carrier routes. Also, each piece in the mailing must bear the same attachment.

EFFECTIVE DATE: November 18, 1978.

FOR FURTHER INFORMATION CONTACT:

Ernest Collins at 202–245–4749.

SUPPLEMENTARY INFORMATION: On July 17, 1978, the Postal Service published for comment in the FEDERAL REGISTER proposed changes to part 134 of the Postal Service Manual as described above (43 FR 30579). Interested persons were invited to submit written comments concerning the proposed changes by August 16, 1978.

Written comments were received from six individuals and organizations. Several commenters opposed the proposal because of the required presorting to carrier route. One commenter generally favored the proposal, except that he questioned the need for requiring presorting of the pieces by carrier routes. He said that there does not appear to be any relationship between presorting and attachment of flyers or other materials. We believe there is a clear relationship between presorted pieces bearing attachments and nonpresorted ones. The less handling that is required by the Postal Service as a result of presorting, the less chance there is of attachments being torn loose from the mail piece and being lost or destroyed and of other mail being damaged.

The commenter also said that if presorting to carrier route were required his firm would probably not be able to attach materials to its third-class bulk rate mailings because of the excess burden presorting would place on its operations. Therefore, he suggested that presorting to carrier route should be coupled with a rate discount proposal. The Postal Service recognizes that the carrier route presort proposal may require more work of mailers, but they should also receive the benefit of undamaged mail pieces through less handling. As to the commenter's rate proposal, the Postal Service has filed a request with the Postal Rate Commission for a recommended decision on establishing a third-class carrier route presort subclass. See 43 FR 41440. If that subclass is established as requested, qualifying mail will be charged a rate that is 1.5 cents per piece less than nonqualifying bulk third-class regular rate matter.

One commenter opposed the proposed rule believing (1) it would cause more articles to be sorted manually because flyers would add more weight, (2) it would increase the volume of mail being sent to dead parcel offices, (3) it would cause handling problems and hazardous conditions, and (4) it would increase postage for the average letter-mailing citizen because extra processing will be required for such pieces.

The commenter's first point about attachments causing manual sortation because of the overall increased weight of the mail piece is not well taken. In the first place, pieces bearing attachments must be presorted to carrier routes. Accordingly, sortation by postal employees should be reduced. As to the increased weight question, the weight of each piece includes any attachment. Accordingly, so long as the mail piece (with the attachment) is within the prescribed weight range it qualifies for the bulk rate.

As to the point that attaching a flyer to a bulk third-class book or catalog will increase the volume of mail being sent to dead parcel offices, the commenter is mistaken. Attachments are not separately addressed. If they become detached from the mail piece, they will be disposed of as waste. They will not be sent to dead parcel branches. See 159.412b of the Postal Service Manual.

The commenter is also mistaken in believing this rule will cause handling problems and increased costs to the Postal Service. The rule specifically requires securing of attachments to avoid handling problems and presorting to carrier route to reduce handlings which will also reduce costs.

One commenter opposed the proposal on the ground that it would permit mailers to circumvent paying the per piece postage for the attachments, which he said could not be justified, considering the present financial status of the Postal Service.

Attachments will not get a free ride. They will be weighed along with the mailing piece and be charged postage as appropriate. If the attachment is subject to a different rate from the mailing piece, both the attachment and the mailing piece must pay the higher bulk rate. As previously noted, the Postal Service is on record with the Postal Rate Commission that presorting to carrier route, which is a requirement in this rule change, will save handling costs for the Postal Service.

One commenter wrote that the proposal to charge the higher rate for the attachment and principal mailing piece "if the mailing piece and the attachment are subject to different rates" may be inconsistent with current requirements for other types of combined mailings in part 139 of the Postal Service Manual. There is no inconsistency. Part 139 of the Postal Service Manual deals with mixed classes. This rule deals only with third-class matter mailed at bulk rates.

The same commenter suggested that, in view of the fact that the attachment may generate no extra handling costs to the Postal Service, it may be inappropriate to charge the higher rate for the entire piece, i.e., the circular pound rate of 41 cents for the piece with the attachment versus the lower 36 cents pound rate for books and catalogs. The commenter recommended that the combined postage be computed at each applicable rate. If the Postal Service accepted the commenter's recommendation, we would have to charge (using the commenter's example) the minimum per piece rate of 8.4 cents for the attachment and 36 cents for the book or catalog, for a total of 44.4 cents for the entire piece. Under the rule adopted here, the rate for the book or catalog, including the attachment, will be 41 cents, since that rate covers the entire piece weighing up to but not including 16 ounces. Furthermore, the policy of charging the higher of two rates included in a mailing is well established where appropriate postage is not paid on each enclosure. Compare 139.331 of the Postal Service Manual.

One commenter suggested clarifying the proposed rule by referring specifically to "envelopes" as one of the authorized attachments for bulk rate books and catalogs. The Postal Service sees no reason specifically to list all the possible third-class attachments that mailers may decide to use. So long as the conditions in .47a–e of the rule are met, any attachment will qualify.

We also made some minor, technical, or clarifying changes to the regulation.

In view of the considerations discussed above, the Postal Service hereby adopts, as amended, the following revision of the Postal Service Manual:

PART 134—THIRD-CLASS

1. In 134.4 add new .47 to read as follows:

134.4 *Preparation—Payment of postage.*

* * * * *

.47 Pieces bearing third-class attachments. The front cover page or the back cover page of a mailing piece may bear an attachment provided the following conditions are complied with:

a. The material must qualify for and be mailed at bulk rates. If the mailing piece and the attachment are subject to different rates, the higher bulk rate shall be paid for both.

b. Pieces bearing attachments must be larger than 6 x 11 inches (too large to be distributed in a regular letter case).

c. The mailing must be presorted to carrier routes.

d. Attachments must be secured so as not to interfere with processing or delivery. Folded or multipage attachments must be secured to prevent opening during handling.

e. Each piece in the mailing must bear the same attachment.

2. In 134.7, revise the first sentence of .71 to read as follows:

134.7 *Enclosures.*

.71 Books and catalogs mailed at bulk rates provided by 134.121. Except as provided in section 134.47, external attachments are not permitted. * * *

A post office services (domestic) transmittal letter making these changes in the pages of the Postal Service Manual will be published and will be transmitted to subscribers automatically.

These changes will be published in the FEDERAL REGISTER as provided in 39 CFR 111.3.

(39 U.S.C. 401(2).)

ROGER P. CRAIG,
Deputy General Counsel.

[4310-10-M]

Title 41—Public Contracts and Property Management

V 43/203 OCT 1978

SUMMARY: This action approves revisions to the Wyoming State Implementation Plan submitted on May 9, 1978 by the Administrator, Air Quality Division of the Wyoming Department of Environmental Quality. The revisions include a provision for continuous emission monitoring of solid fossil fuel fired steam generators as required by EPA regulations and some minor amendments and corrections to other portions of the State regulations. The continuous emission monitoring provision will assist the State in enforcing emission limitations while the minor amendments and corrections will further clarify existing regulations.

EFFECTIVE DATES: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Leo Stander, Air Programs Branch, U.S. Environmental Protection Agency, Region VIII, 1860 Lincoln Street, Denver, Colo. 80295 at 303-837-3711.

SUPPLEMENTARY INFORMATION: On October 6, 1975 (40 FR 46247) EPA required that States include legally enforceable procedures for certain existing sources to continuously monitor emissions for compliance with emission standards. This revision requires continuous opacity monitoring by all solid fossil fuel fired steam generators with heat inputs in excess of 250 million Btu per hour.

Other revisions in the Wyoming regulations include minor changes in definitions, the referral to the FEDERAL REGISTER for methods of ambient air monitoring measurements and analyses, changes in open burning requirements, the adoption of exemptions to permit requirements for small fuel burning equipment and gasoline storage tanks at retail establishments, procedural changes to the permit system and source testing requirements and a correction of an equation in the new source performance standards section. EPA proposed to approve the Wyoming SIP revision on July 19, 1978 (43 FR 31044) and requested public comment. No comments were received.

Requirements for public hearings and plan revisions (40 CFR 51.4 and 51.6) have been met by the State's revision.

The Administrator finds that the Wyoming SIP revisions meet the substantive and procedural requirements of section 110 of the Clean Air Act and 40 CFR Part 51. Therefore, the Administrator approves the Wyoming SIP revisions as set forth in this rulemaking.

This rulemaking will be effective October 19, 1978. The Agency finds that good cause exists for not deferring the effective date of this rulemaking because the regulations are already in effect under State law and Federal approval imposes no new burdens.

(Sec. 110 of the Clean Air Act, as amended (42 U.S.C. 7410); Sec. 301 as amended (42 U.S.C. 7601).)

Dated: October 10, 1978.

DOUGLAS M. COSTLE,
Administrator.

Part 52 of chapter I, title 40 of the Code of Federal Regulations is amended as follows:

Subpart ZZ—Wyoming

1. In § 52.2620, paragraph (c)(10) is added as follows:

§ 52.2620 Identification of plan.

* * * * * *

(c) * * *

(10) Requirements for continuous capacity monitoring by all fossil fuel fired steam generators with heat inputs in excess of 250 million Btu per hour and other miscellaneous revisions to the State regulations as submitted by the Air Quality Division (AQD) on May 9, 1978.

[6560-01-M]

[FRL 985-2]

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

Guam Statutes and Nonregulatory Plan Revisions

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rulemaking.

SUMMARY: It is the purpose of this notice to promulgate final approval of certain portions of the statutory and nonregulatory revisions to the Guam air quality implementation plan submitted to EPA by the Governor on August 14, 1973. This notice also announces that no action is taken on other portions of the revisions to the Guam plan. The intended effect of this action is to update and to correct certain deficiencies in the Guam implementation plan.

EFFECTIVE DATE: November 20, 1978.

FOR FURTHER INFORMATION CONTACT:

Allyn M. Davis, Director, Air and Hazardous Materials Division, EPA, Region IX, 215 Fremont Street, San Francisco, Calif. 94105, Attention: Morris I. Goldberg, telephone 415-556-2463.

SUPPLEMENTARY INFORMATION:

BACKGROUND

On January 25, 1972, the Governor officially submitted to EPA the document entitled "Implementation Plan For Compliance with Ambient Air Quality Standards for the Territory of Guam."

On May 31, 1972 (37 FR 10904) the Administrator, EPA, approved the Guam implementation plan in its entirety.

On August 14, 1973, the Governor officially submitted to EPA a plan revision which contained revisions to all portions of the January 25, 1972, plan.

On January 9, 1974 (39 FR 1454) the Administrator, EPA, solicited public comments on the entire August 14, 1973, plan revision in a FEDERAL REGISTER notice of proposed rulemaking.

On February 25, 1974 (39 FR 7285) the Administrator, EPA, approved or disapproved implementation plans for all States as they related to the review of indirect sources. In so doing the August 14, 1973, Guam plan revision was inadvertently approved in all respects. The intent was to approve only those portions of the Guam plan revision which pertained to complex sources.

On March 2, 1976 (41 FR 8968) the Administrator, EPA, revised the portion of the Code of Federal Regulations (CFR) which lists all approved and disapproved portions of the Guam implementation plan (40 CFR 52.2670). The intent was only to restructure that section of the CFR. Thus, the inadvertent approval of the entire Guam plan revision was repeated in the FEDERAL REGISTER.

DISCUSSION OF ACTION

Under section 110 of the Clean Air Act, as amended, the Administrator, EPA, is required to approve or disapprove all revisions to implementation plans. This final rulemaking addresses only the statutory and certain nonregulatory plan revision items. The entire plan revision has been evaluated by EPA to determine conformance with the requirements of 40 CFR Part 51 and the Act. The Guam regulatory and control strategy portions of the revision submitted on August 14, 1973, will be the subject of a separate FEDERAL REGISTER notice. Public comments were solicited on the entire plan revision on January 9, 1974, and none were received.

APPROVAL

Approval is being promulgated by EPA for the portions of the subject plan revision as follows:

1. Section I: Public hearing,
2. Section II: Introduction,

3. Section III: Legal authority (narrative),
4. Section IV: Ambient air quality standards and air pollution control regulations (narrative),
5. Section V: Emission inventory,
6. Section VI: Air quality data,
7. Section X: Air quality surveillance network (narrative),
8. Section XI: Source surveillance system (narrative),
9. Section XIII: Compliance schedule,
10. Section XV: Resources,
11. Section XVI: Intergovernmental cooperation (narrative),
12. Appendix A: Notice and minutes of public hearing,
13. Appendix C: Pub. L. 11-191 (enacted on Dec. 7, 1972),
14. Appendix F: Summary of air quality data,
15. Appendix G: Steam powerplant parameters,
16. Appendix H: Diffusion model computer printout,
17. Appendix J: Minutes and letters of public hearing on compliance schedules, and
18. Appendix K: Emissions inventory data.

DEFERRAL

No action is being taken at this time by EPA on the portions of the subject plan revision as follows:

1. Section VII: Classification of region,
2. Section XII: Emergency episode system,
3. Section XIV: Review of new sources and modifications, and
4. Appendix I: Plan for prevention of emergency episodes.

NO ACTION

No action is being taken by EPA on portions of the subject plan revision as follows:

1. Appendix B: Guam Air Pollution Control Act (as amended on May 8, 1972), because this Act was superseded by appendix C,
2. Appendix D: Legislative bill 937, because there is no indication that the bill was enacted into law, and
3. Section IX: Complex sources, because final action was taken on this section on February 25, 1974.

CLARIFICATION OF PREVIOUS EPA APPROVALS

As noted in the subsection of this notice entitled Background, the portions of the subject plan revision relating to complex sources were approved on February 25, 1974, but were incorrectly cited in the applicable CFR section. The Identification of plan section of the CFR applicable to Guam (40 CFR 52.2670) is being amended to reflect the previous approval of section IX of the plan revision. The previous approval of the portions of appendix E (regulations) relating to complex sources has been correctly cited in the CFR through a separate FEDERAL REGISTER notice.

(Secs. 110, 301(a) of the Clean Air Act, as amended, 42 U.S.C. 7410 and 7601(a).)

Dated: October 10, 1978.

DOUGLAS COSTLE,
Administrator.

Subpart AAA of part 52 of chapter I, title 40, of the Code of Federal Regulations is amended as follows:

Title 41—Public Contracts and Property Management

CHAPTER 14—DEPARTMENT OF THE INTERIOR

PART 14-4—SPECIAL TYPES AND METHODS OF PROCUREMENT

Architect-Engineer Services

AGENCY: Department of the Interior.

ACTION: Final rule.

SUMMARY: This rule makes changes to the Interior Procurement Regulations concerning redelegations of authority to establish evaluation boards and related functions pertaining to architect-engineer services.

EFFECTIVE DATE: November 20, 1978.

FOR FURTHER INFORMATION CONTACT:

William Opdyke, 202-343-5914.

SUPPLEMENTARY INFORMATION:

BACKGROUND

Redelegations of contracting authority previously have been made by the Secretary to the heads of procuring activities. That system was revised by the Secretary under order No. 3005 dated July 8, 1977. Redelegations of authority were made to the Assistant Secretaries, who redelegated certain authorities to the heads of procuring activities. The amendment to subpart 14-4.10 recognizes the redelegations of contracting authority under Secretary's order No. 3005.

PRIMARY AUTHOR

The primary author of this rule is William Opdyke, Division of Procurement and Grants, Office of Administrative and Management Policy, Department of the Interior, 18th and C Streets NW., Washington, D.C. 20240, telephone 202-343-5914.

WAIVER

It is the general policy of the Department of the Interior to allow time for interested parties to participate in the rulemaking process. However, the amendments contained herein are entirely administrative in nature and public participation would be meaningless. Therefore, the public rulemaking process is waived in this instance in accordance with 5 U.S.C. 553.

IMPACT

NOTE.—The Department of the Interior has determined that this document does not contain a major rule requiring preparation of an Inflation Impact Statement under Executive Order 11821 or OMB Circular A-107.

Accordingly, pursuant to the authority of the Secretary of the Interior contained in 5 U.S.C. 301, 41 CFR

V 43 / 203 OCT 19 78

Accordingly, pursuant to the authority of the Secretary of the Interior contained in 5 U.S.C. 301, 41 CFR Chapter 14 is amended as stated below.

Dated: October 10, 1978.

RICHARD R. HITE,
Deputy Assistant Secretary of the Interior.

Subpart 14–4.10—Architect-Engineer Services

1. Sections 14–4.1004–1, 14–4.1004–4 and § 14–4.1005.1 are revised to read as follows:

§ 14–4.1004–1 Establishment of architect-engineer evaluation boards.

(a) The provisions of § 1–4.1004–1(a) of this title are supplemented to provide that heads of procuring activities who have been redelegated contracting authority by the Secretary or an Assistant Secretary will be responsible for establishing evaluation boards. This responsibility may be reassigned in writing to any subordinate possessing contracting authority and staff capability to appropriately handle such responsibility.

(b) The use of private practitioners on evaluation boards shall require the advance written approval of the Assistant Secretary—Policy, Budget and Administration.

§ 14–4.1004–4 Action by agency head or his authorized representative.

The head of each procuring activity, as the responsible official to whom authority is redelegated, is authorized to perform the functions prescribed by § 1–4.1004–4 of this title.

* * * * *

§ 14–4.1005–1 Negotiation procedures.

The designated contracting officers of the Department functioning under redelegations of contracting authority from the Secretary, an Assistant Secretary, and the heads of procuring activities are authorized to perform the functions described in § 1–4.1005–1 of this title and to negotiate contracts for architect-engineer services.

[4310–10–M]

CHAPTER 114—DEPARTMENT OF THE INTERIOR

PART 114–38—MOTOR EQUIPMENT MANAGEMENT

Official Legend and Agency Identification

AGENCY: Office of the Secretary, Interior.

ACTION: Final regulation.

SUMMARY: This regulation requires specific identification of all Government-owned, or leased motor vehicles and allows for use of official bureau/office decals on GSA or Interior owned motor vehicles.

DATE: Effective immediately.

FOR FURTHER INFORMATION CONTACT:

James O. Wyatt, Chief, Division of Property Management, Office of Administrative and Management Policy, Department of the Interior, Washington, D.C. 20240, telephone 202-343-3185.

SUPPLEMENTARY INFORMATION: Because this amendment relates only to internal Departmental procedures, the proposed rulemaking procedures are inapplicable. The primary author of this document is Gerald A. Dempsey, Personal Property Management Officer, Office of Administrative and Management Policy, telephone number 202-343-3185.

NOTE.—The Department of the Interior has determined that this document does not contain a major proposal requiring preparation of an Inflation Impact Statement under Executive Order 11821 and OMB Circular A-107.

RICHARD R. HITE,
Deputy Assistant Secretary of the Department of the Interior.

OCTOBER 10, 1978.

Pursuant to the Authority of the Secretary of the Interior contained in 5 U.S.C. 301 and 40 U.S.C. 486(c), subpart 114-38.4 is changed to read as follows:

Subpart 114–38.4—Official Legend and Agency Identification

§ 114–38.402 Agency Identification.

(a) Department of the Interior and bureau or office identification shall be displayed on motor vehicles, trailers and motorcycles in conformance with 41 CFR 101–38.4 and 101–38.4903. Official bureau/office decals may be displayed on GSA or Interior owned motor vehicles, subject to the following limitations.

(1) Only the official "Seal" of the bureau/office will be installed.

(2) Decals containing slogans, advertising messages or identification of any bureau/office subunits or activities are not authorized.

(3) Decals will be elastomeric pigmented film-type and will be installed only under the official identification legend.

(4) The cost of installation and removal or vehicle restoration as may be required, will be at the expense of the appropriate bureau/office.

(5) The use of decals will not exclude a motor vehicle from any vehicle rotation program.

(b) Requests for deviation from this regulation shall be submitted to the Director, Office of Administrative and Management Policy (PM).

[4310–84–M]

Title 43—Public Lands: Interior

CHAPTER II—BUREAU OF LAND MANAGEMENT, DEPARTMENT OF THE INTERIOR

APPENDIX—PUBLIC LAND ORDERS

[Public Land Order 5649]

[CA-3156]

CALIFORNIA

Partial Revocation of Reclamation Project Withdrawal

AGENCY: Bureau of Land Management (Interior).

ACTION: Final.

SUMMARY: This order will revoke a Bureau of Reclamation withdrawal order which withdrew a .33 acre tract of public land for the Klamath Reclamation Project in California. The tract of public land remains withdrawn by Public Land Order No. 4791 of April 2, 1970, for the Tule Lake National Wildlife Refuge.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Keith Corrigall, 202-343-8731.

By virtue of the authority contained in section 204 of the Act of October 21, 1976, 90 Stat. 2751 (43 U.S.C. 1714), it is ordered as follows:

1. The order of the Bureau of Reclamation dated May 28, 1926, concurred in by the Bureau of Land Management on May 28, 1926, withdrawing lands for the Klamath Project, is hereby revoked so far as it affects the following described land:

MOUNT DIABLO MERIDIAN

T. 47 N., R. 3 E.,
Sec. 12, lot 5.

Containing .33 of an acre in Siskiyou County.

2. The land is within the boundaries of the Tule Lake National Wildlife Refuge established by PLO No. 4791 dated April 2, 1970, and shall continue to be segregated from disposition under the public land laws, including the mining laws.

GUY R. MARTIN,
Assistant Secretary of the Interior.

OCTOBER 12, 1978.

[4910–60–M]

Title 49—Transportation

CHAPTER I—MATERIALS TRANSPORTATION BUREAU, RESEARCH AND SPECIAL PROGRAMS ADMINISTRATION, DEPARTMENT OF TRANSPORTATION

[Docket No. HM-56; Amdt. Nos. 106-2, 107-5, 171-42, 172-46, 173-121, 174-32, 175-6, 177-43, 178-51]

HAZARDOUS MATERIALS REGULATIONS

Miscellaneous Amendments

AGENCY: Materials Transportation Bureau, Research and Special Programs Administration, DOT.

ACTION: Final rule.

SUMMARY: The purpose of these amendments to the Hazardous Materials Regulations of the Department of Transportation is to change or delete certain incorrect references, to correct certain spelling and editorial errors, and to make minor regulatory changes which will not impose any restrictions on persons affected by these regulations.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Douglas A. Crockett, Chief, Standards Division, Office of Hazardous Materials Regulation, Materials Transportation Bureau, Department of Transportation, 2100 Second Street SW., Washington, D.C. 20590, 202-426-2075.

SUPPLEMENTARY INFORMATION: Since the consolidation of the Hazardous Materials Regulations into title 49 of the Code of Federal Regulations (CFR) which was accomplished under three separate publications of docket HM-103/112 (41 FR 15972, April 15, 1976; 41 FR 40614, September 20, 1976; 41 FR 57018, December 30, 1976), numerous discrepancies have surfaced that continue to appear in the printing of title 49. These discrepancies include mispelled words, incorrect references, inadvertent omissions of phrases and paragraphs within sections, and general punctuation errors. This amendment will reflect the appropriate changes, provide clarification to certain misinterpreted portions of the regulations, and incorporate insignificant regulatory revisions which will not impose any undue burdens upon any person. In addition, important corrections have been incorporated in parts 106 and 107 regarding the recent rulemaking published under docket HM-165 (43 FR 43305, September 25, 1978) relating to the recent reorganization within the Department of Transportation which created the Research and Special Programs Administration.

Except as noted and explained, these amendments do not impose additional requirements. Public notice has not been provided and this amendment is effective without delay. The MTB has determined that the environmental and economic impact associated with these amendments is minimal. Primary drafters of this document are A. Louise Mills, Dockets Section, Office of Program Support and Douglas A. Crockett, Standards Division, Office of Hazardous Materials Regulation.

The following is a brief commentary on the changes for each part in this document.

PART 106

Changes show the correct titles for the Associate Directors of the identified offices in § 106.3 and in Appendix A to this part.

PART 107

Incorporation of an acronym for the various offices in § 107.3 for ease of identification.

Changes show the correct references to the appropriate offices and official titles in numerous sections in this part under items 4, 5, 6, 7, 8, and 9.

Editorial corrections made in § 107.373.

PART 171

Changes in this part include corrections to an improper office reference, a mispelled word, an improper title of an official, and an improper reference to a segment of the regulations.

PART 172

Change made to show the correct office reference in certain sections in this part.

PART 173

Changes correct the references to the appropriate offices and official titles in various sections in this part under items 16, 17, and 17a.

In § 173.32 incorrect section references have been deleted.

In § 173.33 paragraph (d)(5) has been deleted since it is no longer applicable and section references have been corrected.

In § 173.53 a section reference and the Bureau of Explosives address have been corrected.

In § 173.69 section references have been corrected.

In § 173.93 appropriate section references have been added.

In § 173.119 an unnecessary phrase has been deleted, a correction to a placarding reference has been made, and the clarification and correction of a section on viscous flammable liquids has been completed.

In § 173.122 an obsolete reference to rail express has been deleted and an authorization for air transportation has been made.

In § 173.123 appropriate section references have been added.

In § 173.124 an appropriate section reference has been added and clarification of a filing requirement has been made.

In § 173.134 paragraph (b) has been deleted since rail express service is no longer in existence.

In § 173.153 provisions have been incorporated to accommodate the packaging of liquid oxidizers. These provisions have not been published in a notice of proposed rulemaking but are necessary to provide a liquid measurement for liquid oxidizers in limited quantities.

In § 173.168 a paragraph reference has been deleted since it is not applicable.

In § 173.192 the term "picrate of ammonium" has been deleted since it is not referenced in § 172.101 as a proper shipping name.

In § 173.206 paragraph (d)(1) has been reinserted since it was inadvertently omitted in the printing of Title 49, revised as of December 31, 1976.

In § 173.214 specific part and section references have been corrected.

In § 173.220 the phrase "to Subpart F of Part 172 of this subchapter" has been inserted because it was inadvertently omitted in the printing of Title 49, revised as of December 31, 1976.

In § 173.232 the word "pounds" has been inserted in certain paragraphs because it was inadvertently omitted in the printing of Title 49, revised as of December 31, 1976.

In § 173.245 reference to a specification packaging has been corrected.

In § 173.249 a section reference has been corrected.

In § 173.249a a section reference has been corrected.

In § 173.257 a section reference has been corrected.

In § 173.268 a paragraph has been deleted for clarification purposes. This provision has not been published in a notice of proposed rulemaking since it

V 43/203 OCT 78

is not considered restrictive. The provision is a redundant authorization for the use of packagings, based on nitric acid concentration levels, already prescribed in other paragraphs of this section.

In § 173.286 a section reference has been corrected.

In § 173.304 the service pressure reference has been deleted to permit the use of a 4BW cylinder with a lower marked service pressure consistent with the regulations for the hazardous material involved.

In § 173.314, a section reference in paragraph (c), Note 7 has been corrected.

In § 173.315 a section reference has been corrected.

In § 173.333 the phrase "must be equipped with gas-tight valve protection caps which" has been inserted because it was inadvertently omitted in the printing of Title 49, revised as of December 31, 1976.

In § 173.364 a paragraph reference has been clarified.

In § 173.386 specific references to various CFR's related to biological products have been corrected.

In §§ 173.393a and 173.393b section references have been corrected.

PART 174

In § 174.104 the inappropriate word "foreign" has been replaced by "freight".

In §§ 174.201, 174.204, and 174.304 improper reference to a segment of the regulations has been corrected.

In § 174.700 the restriction to flat car use has been eliminated since it was not originally intended to restrict use to a certain type of rail car. Paragraphs (e) (1) and (2) have been corrected from the printing of Title 49, revised as of December 31, 1976. This provision has not been published in a notice of proposed rulemaking since it is not considered a restriction.

PART 175

In §§ 175.45, 175.700 and 175.710 changes show the correct office reference. Also, in § 175.710 section references to the radioactive labels have been corrected.

PART 177

In § 177.821 and § 177.822 a section reference has been corrected.

In § 177.824 the term "special permit" has been corrected to "exemption."

In § 177.834 section references have been corrected.

In § 177.835 reference to a particular segment of the regulations has been added.

In § 177.838 incorrect section references have been deleted.

In § 177.870 section references have been corrected.

PART 178

Changes correct the references to the appropriate offices and official titles in various sections in this part in items 58, 59, and 61.

The obsolete ASTM standard has been replaced by the current standard in various sections in this part in item 60. This provision has not been published in a notice of proposed rulemaking since it is not restrictive.

In § 178.68-12 a section reference has been clarified.

In § 178.196-7 the word "wide" has been inserted following the symbol designation for inches for clarification purposes.

In § 178.205-7 paragraph (b)(1) the letter "F." has been added following the numerical temperatures to indicate a fahrenheit degree measurement. Also, in § 178.205-19 paragraph (a) the obsolete reference to "ICC" has been corrected.

In § 178.209-16 paragraph (a)(2) has been corrected to refer to "end to end" pressure since it was inadvertently changed in the printing of Title 49, revised as of December 31, 1976.

In § 178.224-2 paragraph (d) has been reinserted, minus a reference to the Bureau of Explosives, since it formerly was paragraph (e) under this section and was inadvertently omitted in the printing of Title 49, revised as of January 1, 1967.

In § 178.245-7 paragraph (a) has been amended to reflect identification of the manufacturer.

In § 178.337 section references involving § 173.33 have been corrected to show the applicable paragraphs. Also, in § 178.337-17 a section reference has been corrected.

In § 178.340-8 a section reference has been corrected.

In consideration of the foregoing, Parts 106, 107, 171, 172, 173, 174, 175, 177, and 178 of Title 49 Code of Federal Regulations are amended as follows:

PART 106—RULEMAKING PROCEDURES

1. In § 106.3 paragraphs (a) and (b) are revised; paragraph (c) is deleted as follows:

§ 106.3 Delegations.

• • • • • •

(a) Associate Director for Hazardous Materials Regulation.

(b) Associate Director for Pipeline safety Regulation.

(c) [Deleted]

(2) In Appendix A to Part 106 the introductory texts of paragraphs (a) and (b) are revised, and paragraph (c) is entirely deleted, to read as follows:

APPENDIX A

• • • • • •

(a) The Associate Director for Hazardous Materials Regulation is authorized to conduct all rulemaking proceedings, other than those concerning compliance, enforcement, and preemption matters, except the issuance of final rules and the grant or denial of petitions for reconsideration, under:

• • • • • •

(b) The Associate Director for Pipeline Safety Regulation is authorized to conduct all rulemaking proceedings, other than those concerning compliance and enforcement matters, except the issuance of final rules and the grant or denial of petitions for reconsideration, under:

• • • • • •

(c) [Deleted]

PART 107—HAZARDOUS MATERIALS PROGRAM PROCEDURES

3. Section 107.3 is amended by changing the following two definitions to read as follows:

§ 107.3 Definitions.

• • • • • •

"OHMR (HMR)" means the Office of Hazardous Materials Regulation.

"OOE (OE)" means the Office of Operations and Enforcement.

• • • • • •

4. The words "Associate Director, OHMR" are changed to read "Associate Director for HMR" each time they appear in the following sections:

107.103 (a) and (c), 107.107, 107.109 (a), (b), (c), (d), and (e), 107.111 (a), (c), and (d), 107.113(c), 107.115 (a), (b), and (c), 107.117(a), and 107.123(b).

5. The words "Associate Director of OHMR or OOE" or "Associate Director, OHMR" are changed to read "Associate Director for HMR or OE" each time they appear in the following sections:

107.119 (b), (c), and (d), and 107.121.

6. The words "Associate Director of OOE" are changed to read "Associate Director for OE" each time they appear in the following sections:

107.201(d), 107.207 (a) and (b), 107.209 (a), (b), and (c), 107.219 (a), (b), and (c), 107.311 (e) and (f), 107.313 (a) and (b), 107.315(a), 107.347(c), 107.351(d), 107.353 (a), (b), and (c), and 107.355(a).

§§ 107.221 and 107.319 [Amended]

7. The words "Associate Director of OHMO" are changed to read "Associate Director for OE" each time they appear in §§ 107.221 (a), (b), and (c) and 107.319 (a), (c) and (d).

§ 107.221 [Amended]

8. In § 107.221 paragraph (d) the letters "OHMO" are changed to read "OOE" each time they appear in the paragraph.

§ 107.313 [Amended]

9. In § 107.313 paragraph (b)(1) is amended by changing the words "Associate Director of" to read "Associate Director's".

10. § 107.373 is revised to read as follows:

§ 107.373 Referral for prosecution.

If an inspector or an employee of the OHMR or the OOE becomes aware of a possible willful violation of the act, this chapter or subchapter C of this chapter for which the OOE exercises enforcement responsibility, he shall report it to the Office of the Chief Counsel, Research and Special Programs Administration, U.S. Department of Transportation, Washington, D.C. 20590. If appropriate, the Chief Counsel refers the report to the Department of Justice for criminal prosecution of the offender.

PART 171—GENERAL INFORMATION, REGULATIONS, AND DEFINITIONS

§§ 171.4, 171.5, 171.7, 171.10, 171.14 [Amended]

11. In paragraph (a) of §§ 171.4, 171.5, 171.7, 171.10 and 171.14 the word "chapter" is changed to read "subchapter."

12. In § 171.7 paragraph (b) is revised to read as follows:

§ 171.7 Matter incorporated by reference.

• • • • • •

(b) All incorporated matter is available for inspection in the Dockets Branch, Room 6500 of the Trans Point Building, 2100 Second Street SW., Washington, D.C. 20590.

• • • • • •

§ 171.8 [Amended]

13. In § 171.8 in the definition of "Viscous liquid," the last word "Corp." is changed to read "Cup."

14. In § 171.16 paragraph (b) is revised to read as follows:

§ 171.16 Detailed hazardous materials incident reports.

• • • • • •

(b) Each carrier making a report under this section shall send that report to the Associate Director for Hazardous Materials Regulation, Department of Transportation, Washington, D.C. 20590.

PART 172—HAZARDOUS MATERIALS TABLE AND HAZARDOUS MATERIALS COMMUNICATIONS REGULATIONS

15. The words "Office of Hazardous Materials Operations" are changed to read "Office of Hazardous Materials Regulation" in § 172.100 (c) (the introductory text) and (d). The same change is made in § 172.407 (d)(1) and (d)(3).

PART 173—SHIPPERS—GENERAL REQUIREMENTS FOR SHIPMENTS AND PACKAGINGS

16. The words "Director, OHMO" are changed to read "Associate Director for OE" each time they appear in the following sections:

173.300a (c), (d), (e), (g), (h), (i), 173.300b (c), (d), (e), (f), (g), 173.300c Introductory text of (a) and (b).

17. The words "Office of Hazardous Materials Operations" or "Office of Hazardous Materials" are changed to read "Office of Hazardous Materials Regulation" each time they appear in the following sections:

173.22a(b), 173.86(a)(2), 173.393b(a)(1).

17a. The words "Office of Hazardous Materials Operations" are changed to read "Office of Operations and Enforcement" each time they appear in the following sections:

173.300a(b)(1) and (e), 173.300b(b)(1).

§ 173.32 [Amended]

18. In § 173.32 paragraph (e)(1)(ii), reference to "178.246, 178.247" is deleted from within the parenthesis.

§ 173.33 [Amended]

19. In § 173.33 paragraph (d)(5) is deleted, and "(e)" is replaced by "(d)" wherever it appears in paragraphs "(d)(1), (12), (15), (15) (i) and (k).

§ 173.53 [Amended]

20. In § 173.53 paragraph (f) the reference "§ 173.51(d)" is changed to read "§ 173.51(a)(3)"; in paragraph (h)(1) Note 4, the address of the Bureau of Explosives is changed to read "1920 L Street, N.W., Washington, D.C. 20036."

§ 173.69 [Amended]

21. In § 173.69 paragraph (a) Note 1, the section reference is changed to read "§§ 173.389 through 173.398."

§ 173.93 [Amended]

22. In § 173.93 paragraph (d)(4) the section reference within the parenthesis is changed to read "(§§ 179.200, 179.201 of this subchapter)."

23. In § 173.119 paragraph (b)(1) is amended by deleting "and also the following." and adding a period following the word "specification." Paragraph (h) is amended by changing the word "Dangerous" to read "Flammable." Pargraph (j) is revised to read as follows:

§ 173.119 Flammable liquids not specifically provided for.

• • • • • •

(j) *Viscous flammable liquids.* Flammable liquids which are viscous as defined in § 171.8 of this subchapter must be shipped in specification packagings as prescribed in paragraph (k) or (l) of this section.

• • • • • •

§ 173.122 [Amended]

24. In § 173.122 the introductory text of paragraph (b) is amended by changing "rail express" to read "cargo-only aircraft" in the third line.

§ 173.123 [Amended]

25. In § 173.123 paragraph (a)(5) is amended by adding "179.200, 179.201" following "179.101" within the parenthesis.

§ 173.24 [Amended]

26. In § 173.124 paragraph (a)(4) is amended by adding "(§ 178.92 of this subchapter)" following "Spec. 5P;" paragraph (a)(5) is amended by changing the third sentence to read, "Outage of each tank must be sufficient to prevent the tank from becoming liquid full at 105° F."

§ 173.134 [Amended]

27. In § 173.134 paragraph (b) is deleted.

28. In § 173.153 paragraph (b)(1) is revised to read as follows:

§ 173.153 Limited quantities of flammable solids, oxidizers and organic peroxides.

• • • • • •

(b) • • •

(1) Oxidizers in inside containers having a rated capacity of not over one pint for liquids or a net weight of not over one pound for solids, in strong outside packagings not exceeding 25 pounds net weight each.

• • • • • •

§ 173.168 [Amended]

29. In § 173.168 paragraph (a)(1) is amended by deleting "(5)" in the second line.

(2) • • • In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part

44. In § 173.333 paragraph (a)(2) is revised to read as follows:

§ 173.333 Phosgene or diphosgene.

50. In § 174.700 the introductory text of paragraph (e) is amended by deleting the word "Only" at the beginning of the paragraph and capitalizing "A";

§ 177.838 [Amended]

56. In § 177.838 paragraph (f), the last sentence which is within the parenthesis is deleted.

§ 178.68-12 [Amended]

62. In § 178.68-12 paragraph (a) the reference "173.124(a)" is changed to

V 43 / 203 OCT 19 78

§ 173.168 [Amended]

29. In § 173.168 paragraph (a)(1) is amended by deleting "(5)" in the second line.

30. § 173.192 is revised to read as follows:

§ 173.192 Ammonium picrate, picric acid, trinitrobenzoic acid, and urea nitrate, wet.

Ammonium picrate, picrate acid, trinitrobenzoic acid, and urea nitrate, wet with not loss than 10 percent water, in quantity not exceeding 16 ounces in one outside package, may be shipped as drugs, medicines, or chemicals, when in glass bottles securely stoppered, each bottle inclosed in a strong fiber carton properly cushioned in the outside shipping case. No restrictions other than packing prescribed by this section are required when these materials are offered for transportation.

31. In § 173.206 paragraph (d)(1) is added to read as follows:

§ 173.206 Sodium or potassium, metallic; sodium amide; sodium potassium alloys; sodium aluminum hydride; lithium metal; lithium silicon; lithium ferro silicon; lithium hydride; lithium borohydride; lithium aluminum hydride; lithium acetylide-ethylene diamine complex; aluminum hydride; cesium metal; rubidium metal; ziroconium hydride, powdered.

• • • • •

(d) • • •

(1) In inside hermetically sealed metal cartridges not exceeding 18 grams net weight each, packed in strong outside packagings with net weight of lithium or rubidium metal not exceeding one pound; which outside packaging may be further overpacked in strong wooden boxes or fiber drums provided total net weight of lithium or rubidium metal in one outside box or drum does not exceed one pound.

• • • • •

§ 173.214 [Amended]

32. In § 173.214 paragraph (e) is amended by changing the reference in the last sentence to read "Parts 100-189 of this subchapter and Part 397 of this Title."

33. In § 173.220 the last sentence of paragraph (a)(2) is revised to read as follows:

§ 173.220 Magnesium or zirconium scrap consisting of borings, clippings, shavings, sheets, turnings, or scalpings, and magnesium metallic (other than scrap), powdered, pellets, turnings, or ribbon.

(a) • • •

(2) • • • In addition, shipments are not subject to Subpart F of Part 172 of this subchapter, to Part 174 of this subchapter except § 174.24 and to Part 177 of this subchapter except § 177.817.

• • • • •

§ 173.232 [Amended]

34. In § 173.232 paragraphs (c)(1), (c)(3), (c)(4), and (c)(5) are amended by adding the word "pounds" after the numerical figure.

§ 173.245 [Amended]

35. In § 173.245 paragraph (a)(22) is amended by changing "specification 22" in the fourth line to read "specification 2U."

§ 173.249a [Amended]

36. In § 173.249 paragraph (a)(10) reference "173.401(c)" is changed to read "172.312 of this subchapter."

§ 173.249 [Amended]

37. In § 173.249a paragraphs (a) and (b) are amended by changing the section reference "§ 172.5" to read "§ 172.101 of this subchapter."

§ 173.257 [Amended]

38. In § 173.257 paragraph (a)(14) is amended by changing the section reference "§ 173.401(c)" to "§ 172.312 of this subchapter."

§ 173.268 [Amended]

39. In § 173.268 paragraph (b)(5) is deleted.

40. In § 173.286 paragraph (b)(1) is amended by changing the section reference "§ 172.5(a)" to read "§ 172.101 of this subchapter."

§ 173.304 [Amended]

41. In § 173.304 paragraph (d)(3)(i) is amended by changing "4BW240" in the second line to read "4BW."

§ 173.314 [Amended]

42. In § 173.314 paragraph (c) Note 7 following the table is amended by changing the reference "§ 174.560" to read "§ 174.204."

43. In § 173.315 paragraph (1)(7)(i) is revised to read as follows:

§ 173.315 Compressed gases in cargo tanks and portable tank containers.

• • • • •

(l) • • •

(7) • • •

(i) The ammonia received was certified as containing 0.2 percent water as prescribed in §§ 172.203(h)(l)(i) and 177.817(a) of this subchapter; and

• • • • •

44. In § 173.333 paragraph (a)(2) is revised to read as follows:

§ 173.333 Phosgene or diphosgene.

(a) • • •

(2) specification 106A500X (§§ 179.300, 179.301 of this subchapter) tanks. Authorized only for phosgene. Each tank must be equipped with gastight valve protection caps which must be approved by the Bureau of Explosives. Tanks must not be equipped with safety devices of any type. Outage must be sufficient to prevent tanks from becoming liquid full at 130° F (55° C). (See §§ 174.200 and 177.834(m) of this subchapter for special requirements for rail and highway shipments.)

• • • • •

§ 173.364 [Amended]

45. In § 173.364 the introductory text paragraph (a) is amended by changing "paragraph (3)" in the second line to read "paragraph (a)(3)."

46. In § 173.386 paragraph (a)(3) is revised to read as follows:

§ 173.386 Etiologic agents; definition and scope.

(a) • • •

(3) A "biological product" means a material prepared and manufactured in accordance with the provision of 9 CFR Part 102 (licensed veterinary biological products), 21 CFR Part 601 (Licensing), 21CFR § 312.1 (Conditions for exemption of new drugs for investigational use), 9 CFR Part 103 (Biological products for experimental treatment of animals), or 21 CFR § 312.9 (New drugs for investigational use in laboratory research animals or in vitro tests), and which in accordance with these provisions, may be shipped in interstate commerce.

• • • • •

§§ 173.393a, 173.393b [Amended]

46. In §§ 173.393a and 173.393b paragraph (a)(6) is amended by changing the reference "§173.427(a)(5)(v)" to read "§ 172.203(d)(1)(vi) of this subchapter" in each section.

PART 174—CARRIAGE BY RAIL

§ 174.104 [Amended]

47. In § 174.104 paragraph (f), the sixth line of the Car Certificate is amended by changing the word "foreign" to read "freight."

§§ 174.201, 174.204 [Amended]

48. In §§ 174.201(b), 174.204(a), and (a)(2), and § 174.304 the words "of this subchapter" are added following the section reference(s) within the parenthesis in each section.

50. In § 174.700 the introductory text of paragraph (e) is amended by deleting the word "Only" at the beginning of the paragraph and capitalizing "A"; paragraphs (e)(1) and (e)(2) are revised to read as follows:

§ 174.700 Special handling requirements for radioactive materials.

• • • • •

(e) • • •

(1) Radioactive materials in containers weighing 5,000 pounds or more;

(2) Strong wooden boxes with inside containers of solid radioactive material, securely braced and cushioned; or

• • • • •

PART 175—CARRIAGE BY AIRCRAFT

§§ 175.45, 175.700, 175.710 [Amended]

50. In §§ 175.45(c), 175.700(c) and 175.710(a)(3), the words "Office of Hazardous Materials Operations" are changed to read "Office of Hazardous Materials Regulation."

51. In § 175.710 paragraph (a)(2) the section references "§§ 172.437, 172.438, and 172.439" are changed to read "§§ 172.436, 172.438, and 172.440."

PART 177—CARRIAGE BY PUBLIC HIGHWAY

§§ 177.821, 177.822 [Amended]

52. In §§ 177.821(c) and 177.822(a) reference "§ 172.5" is changed to read "§ 172.101."

§ 177.824 [Amended]

53. In § 177.824 paragraphs (a)(2) and (c)(4) the words "special permit" are changed to read "exemption" each time they appear.

54. In § 177.834 paragraph (m)(4) is revised to read as follows:

§ 177.834 General requirements.

• • • • •

(m) • • •

(4) Compliance with §§ 174.200 and 174.204 of this subchapter for combination rail freight, highway shipments and for trailer-on-flat-car service is required.

• • • • •

§ 177.835 [Amended]

55. In § 177.835 paragraph (m) the words "of this subchapter" are added following the section references within the parenthesis.

§ 177.838 [Amended]

56. In § 177.838 paragraph (f), the last sentence which is within the parenthesis is deleted.

§ 177.870 [Amended]

57. in § 177.870 paragraph (d) is amended by changing the reference "§ 172.5" to read "§ 172.101"; in paragraph (g) the reference "§ 173.416" is changed to read "§§ 172.436, 172.438, and 172.440."

PART 178—SHIPPING CONTAINER SPECIFICATIONS

58. The words "Director, OHMO" are changed to read "Associate Director for OE" each time they appear in the following sections:

178.36-3	178.51-3
178.37-3	178.52-3
178.38-3	178.54-3
178.39-3	178.55-3
178.40-3	178.56-3
178.42-3	178.57-3
178.43-3	178.58-3
178.44-3	178.59-3
178.45-3	178.60-3
178.47-3	178.61-3
178.48-3	178.65-3(a), (b), (c)
178.49-3	178.68-3
178.50-3	

§ 178.53-3 [Amended]

59. In § 178.53-3 the words "Director, Office of Hazardous Materials Operations (OHMO)" and "Director, OHMO" are changed to read "Associate Director for OE."

60. In the following sections, the Standard "E8-57T" is changed to read "E8-78" each time it appears in the following sections:

178.36-16	178.51-15
178.37-16	178.52-16
178.38-16	178.53-15
178.39-16	178.54-15
178.40-16	178.55-16
178.41-16	178.56-15
178.43-16	178.57-15
178.44-16	178.58-16
178.45-14	178.59.-14
178.48-16	178.60-16
178.49-16	178.61-15
178.50-16	178.68-15

§ 78.65-14 [Amended]

61. In § 178.65-14 paragraph (d) the words "Office of Hazardous Materials" is changed to read "Office of Operations and Enforcement, Materials Transportation Bureau, Department of Transportation, Washington, D.C. 20590."

§ 178.68-12 [Amended]

62. In § 178.68-12 paragraph (a) the reference "173.124(a)" is changed to read "173.124(a)(2)."

§ 178.196-7 [Amended]

63. In § 178.196-7 paragraph (a) Note 1, the word "wide" is added following the number and symbol "2½"".

§ 178.205-7 [Amended]

64. In § 178.205-7 paragraph (b)(1) the letter "F." is added following both 180° and 200°; in § 178.205-19 paragraph (a) is amended by changing "ICC" to read "DOT."

65. In § 178.209-16 paragraph (a)(2) is revised to read as follows:

§ 178.209 Specification 12H; fiberboard boxes.

• • • • • •

§ 178.209-16 Completed container.

(a) • • •

(2) Three loaded samples to be tested. Each must withstand end to end pressure of at least 500 pounds without deflection of over 1½ inches.

• • • • • •

66. In § 178.224-2 paragraph (d) is added to read as follows:

§ 178.224 Specification 21C; fiber drum.

• • • • • •

§ 178.224-2 Type tests.

• • • • • •

(d) The tests described above must be made by any company starting production, for each plant location of manufacture, on samples taken as random of each type and diameter of container and must be repeated every 4 months or less during production. Samples last tested must be retained until further tests are made. The tests and procedure described may be conducted at one central laboratory when testing facilities are not available at all plants.

§ 178.245-7 [Amended]

67. In § 178.245-7 paragraph (a) is amended by changing the words "manufactured for" to read "manufactured by" each time they appear in the form.

§ 178.337 [Amended]

68. In § 178.337 references to § 173.33 are amended to read as follows:

	Now reads	Change to
178.337-1(e)	173.33(j)	173.33(l).
178.337-2(c)	173.33(h)(1)	173.33(g)(1).
178.337-8(b)	173.33(g)(9)	173.33(f)(9).
	173.33(l) (4) and (5)	173.33(h) (4) and (5).
178.337-9(b)(1)	173.33(g) (1) and (3)	173.33(f) (1) and (3).
178.337-9(b)(2)	173.33(g)	173.33(f).
178.337-11(a)(2)	173.33(l)	173.33(h).
178.337-11(a)(3)	173.33(l)(4)	173.33(h)(4).

	Now reads	Change to
178.337-11(b)	173.33(i)(3)	173.33(h)(3).
178.337-14(b)	173.33(g)(7)	173.33(f)(7).
178.337-15	173.33(g) (6) and (10)	173.33(f) (8) and (10).

§ 178.337-17 [Amended]

69. In § 178.337-17 paragraph (b) is amended by changing the reference "§ 177.823" to read "§ 172.328 of this subchapter."

§ 178.340-8 [Amended]

70. In § 178.340-8 paragraph (b) the reference "§ 293.86" is changed to read "§ 393.86."

(49 U.S.C. 1803, 1804, 1808; 49 CFR 1.53(e).)

NOTE.—The Materials Transportation Bureau has determined that these amendments will not have a major economic impact under the terms of Executive Order 12044 and DOT implementing procedures (43 FR 9582).

Issued in Washington, D.C., on October 12, 1978.

L. D. SANTMAN,
Acting Director, Materials Transportation Bureau.

SUBTITLE A—OFFICE OF THE SECRETARY

[CGD 78-024A]

PART 7—PUBLIC AVAILABILITY OF INFORMATION

Administrative Correction

AGENCY: Coast Guard, DOT.

ACTION: Final rule.

SUMMARY: This amendment corrects the listing of locations of Coast Guard document inspection facilities where records are available to reflect the designation of "administrative law judges" rather than "hearing examiners." This designation has recently been changed, and this amendment brings the listing up-to-date.

EFFECTIVE DATE: October 19, 1978.

FOR FURTHER INFORMATION CONTACT:

Comdr. Charles H. King, Jr., Office of Merchant Marine Safety (G-MMI-2/82), Room 8205, Department of Transportation, Nassif Building, 400 Seventh Street SW., Washington, D.C. 20590, 202-426-2215.

SUPPLEMENTARY INFORMATION: Since this is a matter relating to agency management, under 5 U.S.C. 553(a)(2) notice and public procedure are unnecessary. Under 5 U.S.C. 553(d)(3), this amendment may be made effective in less than 30 days after publication in the FEDERAL REGISTER since it is an administrative correction. This rule has been reviewed under the Department of Transportation's "Policies and Procedures for Simplification, Analysis, and Review of Regulations" (43 FR 9582, Mar. 8, 1978). A final evaluation has been prepared, and has been included in the public docket.

DRAFTING INFORMATION

The principal persons involved in drafting this rule are: Comdr. Charles H. King, Jr., Project Manager, Office of Merchant Marine Safety, and Edward J. Gill, Jr., Project Attorney, Office of the Chief Counsel.

Accordingly, appendix B of part 7 of title 49 of the Code of Federal Regulations is amended as follows:

By revising paragraph 3(b) to read as follows:

APPENDIX B—U.S. COAST GUARD

* * * * *

3. * * *

(b) Opinions and orders of administrative law judges are available at the document inspection facility of the Office of the Commandant and the district in which the administrative law judge is located.

* * * * *

(5 U.S.C. 552 as amended by Pub. L. 93-502, 88 Stat. 1565; 49 CFR 7.1(d).)

NOTE.—The Coast Guard has determined that this document does not contain a major proposal requiring preparation of an economic impact statement under Executive Order 11821, as amended, and OMB Circular A-107.

Dated: October 10, 1978.

J. B. HAYES,
Admiral, U.S. Coast Guard Commandant.

[FR Doc. 78-29532 Filed 10-18-78; 8:45 am]

CHAPTER V—NATIONAL HIGHWAY TRAFFIC SAFETY ADMINISTRATION, DEPARTMENT OF TRANSPORTATION

[Docket No. 75-16; Notice 24]

PART 571—FEDERAL MOTOR VEHICLE SAFETY STANDARDS

Air Brake Systems

AGENCY: National Highway Traffic Safety Administration (NHTSA).

ACTION: Final rule and interpretation of court decision.

SUMMARY: The U.S. Court of Appeals decision in *PACCAR* v. *National Highway Traffic Safety Administration and Department of Transportation* invalidated aspects of Standard No. 121, *Air Brake Systems.* This notice advises interested persons of the agency's interpretation of the *PACCAR* holdings, to guide continuing compliance with the standard. This notice also amends the standard as specified by the court to provide for "due care" certification.

EFFECTIVE DATE: October 13, 1978.

FOR FURTHER INFORMATION CONTACT:

Tad Herlihy, Office of Chief Counsel, National Highway Traffic Safety Administration, 400 Seventh Street SW., Washington, D.C. 20590, 202-426-9511.

SUPPLEMENTARY INFORMATION: Standard No. 121 (49 CFR 571.121) regulates the braking system performance of air-braked trucks, buses, and trailers. The standard has been in effect for trailers since January 1, 1975, and for trucks and buses since March 1, 1975. Requirements are established for the service, emergency, and parking brake systems of these vehicles. Truck braking systems are a particularly critical safety system, due to large variations between the unloaded and loaded weight conditions and the generally higher weight of trucks compared to other vehicles on the highway. Major requirements of the standard are that vehicles stop in specified distances and that the wheels not lock uncontrollably during these stops. The "no lockup" requirement insures that skidding due to wheel lockup and loss of lateral stability is minimized.

In January 1975 a truck manufacturer petitioned for judicial review of the standard's promulgation in accordance with § 105 of the National Traffic and Motor Vehicle Safety Act (the Vehicle Safety Act) (15 U.S.C. 1394) under which the standard was issued. Petitioner PACCAR was subsequently joined by a trade association of truck users and a trade association representing the small manufacturers that complete trucks by mounting a body or specialized equipment on incomplete truck chassis. The three cases were consolidated for argument in the Ninth Circuit U.S. Court of Appeals.

The court's decision was issued in April 1978 (573 F. 2d 632, 9th Cir. 1978, Cert. denied Oct. 2, 1978), and the mandate making it effective was entered October 11, 1978. Certain aspects of the standard were invalidated, and the purpose of this notice is to set forth the agency's interpretation of the court's specified holdings to guide continuing compliance with the standard. One of the court's three holdings, that concerning test procedures and conditions, has already been responded to by the agency (43 FR 39390; September 5, 1978).

INVALIDATION OF CERTAIN STOPPING DISTANCES

While expressing support for requirements that "decreas[e] the disparity of stopping distances between ordinary automobiles and heavier vehicles" and maintain "vehicle stability and directional control," the court was concerned about the safety of "heavier axles" in combination with the antilock systems used generally to provide "no lockup" performance. The court was concerned that a malfunctioning antilock system would allow wheel lockup of more aggressive front axle brakes more often or sooner than had been the case with weaker brakes, resulting in loss of steering control. The court's emphasis on the combination of aggressive front axle brakes and antilock is clear in the opinion:

> As new components—strong front axles, new brake linings, and mini-computers to control wheel lock and skid—were mass-produced, and subsequently *put together in a unique combination,* grave problems developed (emphasis supplied) 573 F. 2d at 641.

In referring to "heavier axles," the court was describing the brake retardation levels supplied by manufacturers to obtain the 258-foot (and subsequent 277-foot) 6-mph stopping distances specified by the standard prior to February 26, 1976. The 60-mph stopping distances were extended to 293 feet on that date (41 FR 8783; Mar. 1, 1976) and have resulted in significant reduction in retardation force levels. The court did not take this change into account, because the record filed with the court and the July 1976 oral argument contained no information about the performance of the vehicles built after February 26 to conform to the 293-foot distance. The agency received no petitions for reconsideration of the brake force levels established by the March 1976 notice.

The court held, with regard to stopping distances:

> * * * those parts of the Standard requiring heavier axles and the antilock device should be suspended. The evidence indicates that this can be accomplished if we hold, as we do, that the stopping distance requirements from 60 mph are invalid * * *. We hold only that more probative and convincing data evidencing the reliability and safety of vehicles that are equipped with antilock and in use must be available before the agency can enforce a standard requiring its installation. 573 F. 2d at 643.

These two statements of the holding differ from one another, the first specifying both "heavier axles" and "the antilock device" for invalidation, while the second only specifies antilock. The text of the opinion (located at footnote 26) indicates that the court actually equates "stopping distance" with "the antilock requirement." The agency concludes that the court intended to invalidate "the stopping distance requirements from 60 mph" only insofar as a combination of high retardation force levels and a malfunctioning antilock would cause stability problems beyond those in vehicles built before the standard's effective date. At the same time the court was clear that the "no lockup" requirements were invalidated for both trucks and trailers.

It is therefore the agency's view that the "no lockup" portions of S5.3.1 and S5.3.2 insofar as they apply to trucks and trailers are invalid, along with the related stopping distances of 293 feet for service brake capability and 613 for emergency brake capability (720 for truck-tractors in the unloaded condition) established for 60-mph loaded and unloaded stopping tests under S5.3.1 and S5.7 for trucks. For those trucks with a speed attainable in 2 miles of less than 60 mph, the agency believes that the "top speed" stopping distance specified by S5.3.1.1 for both service brake and emergency brake stopping tests are invalid.

The agency does not believe that any requirements of standard No. 121 are invalidated for buses because of the court's statement in footnote 1 that "[t]he part of the standard that regulates air-braked buses is not at issue here." It is clear that the court was aware of the experience of buses built to conform to the standard, as evidenced by the court's reliance on statements by bus operators (footnote 43) and discussion of the rulemaking history for buses (text following footnote 25). The court's explicit removal of bus requirements from its consideration seems a clear intent to limit the ambit of its decision to trucks and trailers.

The agency concludes that only the actual stopping distances from 60 mph (or top speed) are invalidated and not other requirements that bear on performance of the vehicle. This understanding of the court decision fulfills the court holding cited above, while it does not disturb braking characteristics which do not present potential adverse handling characteristics. Thus, the stopping test sequence in which the truck or trailer must remain within a 12-foot lane from 60 mph (or top speed) is not invalid, while the requirement to stop within a specified distance is invalid.

The dynamometer requirements of S5.4 for trucks and trailers also were not affected by the court's holding. It does appear that the requirement for 90 p.s.i. air pressure in the trailer control line during the stop constitutes a portion of the "no lockup" requirement and is therefore invalidated by the court. Collateral requirements such as air reservior volume that may be indirectly based on "no lockup" performance are not affected by the court decision.

A secondary reason to conclude that the testing from 60 mph remains in the test sequence is that manufacturers must continue to certify compliance with 20-mph stops and a parking brake test following certain 60-mph stops. The 60-mph stops affect the brake linings and could affect results of other portions of the testing if they are dropped from the test sequence.

With regard to the invalidated portions of the standard, the agency expects to publish a FEDERAL REGISTER notice shortly that sets forth its plans.

"DUE CARE" CERTIFICATION

The court expressed concern about the certification responsibilities of the "final stage" manufacturers that mount the body or specialized equipment on mass-produced truck chassis built by other manufacturers. Section 114 of the Vehicle Safety Act (15 U.S.C. 1403) specifies that the manufacturer or distributor of a motor vehicle shall certify that its product conforms to all applicable Federal motor vehicle safety standards. The agency has issued regulations that divide the responsibility for certification of "multistage" vehicles among the "incomplete vehicle manufacturers" of the chassis, any "intermediate stage" manufacturer involved, and the "final stage" manufacturer that completes the vehicle (49 CFR Parts 567, 568).

Standard No. 121 sets forth performance requirements that air-braked vehicles must conform to, and further sets forth the testing conditions under which the performance must be met (par. S6, *Conditions*). The requirements include a specification that certain stopping and wheel control capabilities be available under certain conditions, including stops from 60 mph and 20 mph in the unloaded and loaded conditions. The standard does

not require that manufacturers subject their vehicles to these stops. It is accepted that the smaller final-stage manufacturers may not in all cases be able to certify that their vehicles comply with standard No. 121. What is required by the court's holding, in the agency's view, is the modification of standard No. 121 itself to state that a

[4310-55-M]

Title 50—Wildlife and Fisheries

restricted areas are available at the Refuge headquarters. Both restricted areas will be conspicuously posted with signs which read "Warning Man-

ly known as "Haulover Canal" and "Hanger AF Turnbasin and Channel". The restricted zone in each location is approximately 10,000 feet in length.

FOR FURTHER INFORMATION CONTACT:

Robert G. Johnson, Refuge Man-

V 43 N 203 OCT 19 78

not require that manufacturers subject their vehicles to these stops. It is accepted that the smaller final-stage manufacturers may not in all cases have the resources and capabilities to conduct such testing. The agency has regularly stated that a manufacturer may meet its statutory certification requirements either through demonstration of the specified stops or by any other chosen means that fulfills the related statutory requirement that a manufacturer must exercise "due care" in certification (15 U.S.C. 1397(b)(2)). The agency has not stated to any final-stage manufacturer what its "due care" responsibility might consist of, in recognition of the reality that "due care" is essentially a judicial concept that is determined on a case-by-case basis in light of the factual situation facing the particular manufacturer at the time of certification. Because the engineering and financial resources available to a particular manufacturer are not fixed, what constitutes "due care" would vary among manufacturers, and even vary from day-to-day for the same manufacturer, making such a statement by the agency impracticable.

The court was sympathetic to the situation of the smaller final-stage manufacturer in holding that:

> • • • Since NHTSA has admitted that road testing is beyond the practical and financial reach of the final stage manufacturers, it must propose some alternative method for those manufacturers which, if followed, it will recognize as fulfilling the due care requirement. 573 F2d at 645.

Fortunately, an alternative to road testing does exist that would constitute "due care" in certification by any final-stage manufacturer that adopted it, whatever its resources and engineering expertise. Parts 567 and 568 obligate the incomplete vehicle manufacturer to provide a basis for complete certification (the "incomplete vehicle document") with each vehicle, which can be used for certification as long as the final-stage manufacturer does not violate an "envelope" of conditions listed in the document as the reasonable limits to which the incomplete vehicle manufacturer has already tested. A final-stage manufacturer can avoid any road testing simply by a "passthrough" of this incomplete vehicle document. Of course, it would be a logical impossibility for the agency to specify what constitutes "due care" for the infinite number of configurations that exceed the "envelope" of conditions in advance of the manufacturer's decision to do so.

The problem, as noted by the court, is that the final-stage manufacturer only had assurances from the agency in the past that conformity to the incomplete vehicle document would constitute the exercise of due care in complying with standard No. 121. What is required by the court's holding, in the agency's view, is the modification of standard No. 121 itself to state that a certification of compliance based on adherence to the incomplete vehicle document would constitute the exercise of due care. This is accomplished by this notice.

It is recognized that trailers and buses other than school buses are typically manufactured in one stage and this alternative method is unavailable to these vehicles. However, the court's holding discusses only the obligations of final-stage manufacturers that, by definition, only exist in the case of multistage manufacture.

In accordance with Department of Transportation policy for the analysis of regulatory actions, it is found that the amendment concerning due care does not constitute a significant regulation that requires regulatory analysis. Evaluation of the change indicates that it will have no economic effects other than a potential reduction of certification costs for some final-stage manufacturers.

Findings. Because the amendment constitutes an alternative method of compliance and creates additional requirements for no person, it is found for good cause shown that notice and opportunity for comment are unnecessary and that an effective date sooner than 30 days from the date of publication is in the public interest. The court's holding with regard to "no lockup" and stopping distances take effect independently of administrative action by the agency.

In consideration of the foregoing, paragraph S6 of standard No. 121 (49 CFR 571.121) is amended by the addition of a sentence at the end of the text to read as follows:

"Compliance of vehicles manufactured in two or more stages may, at the option of the final-stage manufacturer, be demonstrated to comply with this standard by adherence to the instructions of the incomplete vehicle manufacturer and any intermediate-stage manufacturer provided with the vehicle in accordance with § 568.4(a)(7)(ii) and § 568.5 of Title 49, Code of Federal Regulations."

The program official and lawyer principally responsible for the development of this document are Duane Perrin and Tad Herlihy, respectively.

(Secs. 103, 119, Pub. L. 89-563, 80 Stat. 718 (15 U.S.C. 1392, 1407); delegation of authority at 49 CFR 1.50.)

Issued on October 13, 1978.

JOAN CLAYBROOK,
Administrator.

Title 50—Wildlife and Fisheries

CHAPTER I—U.S. FISH AND WILDLIFE SERVICE, DEPARTMENT OF THE INTERIOR

PART 26—PUBLIC ENTRY AND USE

Merritt Island National Wildlife Refuge, Fla.

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Final rule.

SUMMARY: This rule establishes regulations to restrict boat speeds in two locations within the boundaries of Merritt Island National Wildlife Refuge to protect the endangered West Indian Manatee (*Trichechus manatus*). Research has shown that boat-related accidents are responsible for 34 percent of the manatee mortalities where cause of death could be determined. These regulations will protect manatees in heavily traveled boat channels.

EFFECTIVE DATES: Effective November 20, 1978 through December 31, 1979.

ADDRESS: Send comments to: Donald J. Hankla, Area Manager, U.S. Fish and Wildlife Service, 900 San Marco Boulevard, Jacksonville, Fla. 32207, telephone 904-791-2267.

FOR FURTHER INFORMATION CONTACT:

Stephen R. Vehrs, Refuge Manager, Merritt Island National Wildlife Refuge, P.O. Box 6504, Titusville, Fla. 32780, telephone 305-867-4820.

SUPPLEMENTARY INFORMATION: The primary author of this document is Stephen R. Vehrs.

BACKGROUND

Most of the waters within Merritt Island National Wildlife Refuge have been designated as critical habitat for the endangered West Indian Manatee. Research by the U.S. Fish and Wildlife Service has shown that boat-related accidents are responsible for 34 percent of those manatee mortalities where cause of death could be determined. Therefore, to reduce manatee mortality from collision with boats or boat propellers, boat speed will be regulated to "Minimum Wake/Slow-Speed" on Merritt Island National Wildlife Refuge in two separate locations where there is a high probability of boat-manatee collision. These two areas are locally known as "Haulover Canal" and "Hangar AF Turnbasin and Channel." The restricted zone in each location is approximately 10,000 feet in length. Maps delineating the restricted areas are available at the Refuge headquarters. Both restricted areas will be conspicuously posted with signs which read "Warning Manatee Area" "Minimum Wake/Slow-Speed". Boating shall otherwise be in accordance with all applicable State and Federal regulations.

The provisions for these special regulations supplement the regulations which cover boating on National Wildlife Refuge areas which are set forth in Title 50, Code of Federal Regulations, § 27.32. Part 27 of 50 CFR provides that U.S. Coast Guard Regulations, Titles 33 and 46 CFR are also applicable on navigable waters.

SUMMARY OF PUBLIC COMMENT AND SERVICE RESPONSES

On June 27, 1978 (FR Doc. 78-17956) proposed special regulations were published restricting boat speeds on Merritt Island National Wildlife Refuge. Comments were received from two agencies and four individuals. All comments supported the proposed regulations. Two individuals suggested more restrictive regulations.

The National Fish and Wildlife Laboratory suggested using the common name West Indian Manatee instead of Florida Manatee. The laboratory also suggested changing the mortality statistics to reflect more recent figures. Both of these changes are implemented in this final rule.

The Marine Mammal Commission quoted the more accurate mortality statistics and suggested adding a definition for Minimum Wake/Slow-Speed. These changes have also been made.

As provided by 50 CFR 26.34 the Service hereby issues the following special regulations:

§ 26.34 Special regulations concerning public access, use, and recreation for individual national wildlife refuges.

FLORIDA

MERRITT ISLAND NATIONAL WILDLIFE REFUGE

Boat speed is limited to "Minimum Wake/Slow-Speed" in two areas locally known as "Haulover Canal" and "Hanger AF Turnbasin and Channel". The restricted zone in each location is approximately 10,000 feet in length. These areas will be posted with signs which read, "Warning Manatee Area". "Minimum Wake/Slow-Speed". In addition all boating is subject to the regulations in 50 CFR 27.32.

For the purposes of this regulation the term "Minimum Wake/Slow-Speed" is defined as that speed which permits good steerage but produces little or no wake. Boats that are "planing" are not at slow speed. A boat that is not planing, but is "squatting" is not making a minimum wake. A boat that has slowed enough to level out is making "minimum wake".

NOTE.—The U.S. Fish and Wildlife Service has determined that this document does not contain a major proposal which would require the preparation of an economic impact statement under executive order 11949 and OMB Circular A-107.

Dated: October 6, 1978.

PART 32—HUNTING

Opening of Shiawassee National Wildlife Refuge, Saginaw, Mich., to Archery Deer Hunting

AGENCY: U.S. Fish and Wildlife Service, Department of the Interior.

ACTION: Special regulation.

SUMMARY: The Director has determined that the opening of archery deer hunting of Shiawassee National Wildlife Refuge is compatible with the objectives for which the area was established, will utilize a renewable natural resource, and will provide additional recreational opportunity to the public.

DATES: December 1, 1978, to December 31, 1978.

FOR FURTHER INFORMATION CONTACT:

Robert G. Johnson, Refuge Manager, 6975 Mower Road, Saginaw, Mich. 48601, telephone 517-777-5930.

SUPPLEMENTARY INFORMATION:

§ 32.32 Special regulations; big game, for individual wildlife refuge areas.

Hunting of deer with bow and arrow is permitted on the entire refuge area from 6 a.m. to 7 p.m. e.s.t. each day from December 1, 1978, through December 31, 1978, only.

Hunting shall be in accordance with all State regulations covering the hunting of deer, subject to the following conditions:

(1) All bow and arrow hunters must possess a valid Federal permit. These permits must be carried by the hunter whenever on refuge lands.

(2) Applications for Federal permits must be received at the refuge office on or before October 31, 1978.

(3) All hunters must exhibit their hunting license, Federal permit, deer tag, game, and vehicle contents to Federal and State officers upon request.

(4) Bow hunters are prohibited from constructing or using any permanent blind, platform or scaffold.

The provisions of this special regulation supplement the regulations which govern hunting on wildlife refuge areas generally which are set forth in title 50, Code of Federal Regulations, part 32, and are effective through December 31, 1978. The public is invited to offer suggestions and comments at any time.

NOTE.—The U.S. Fish and Wildlife Service has determined that this document does not contain a minor proposal requiring preparation of an economic impact statement under Executive Order 11949 and OMB Circular A-107.

Agricultural Marketing Service

[7 CFR Part 913]

[Docket No. AO-353-A2]

GRAPEFRUIT GROWN IN THE INTERIOR DISTRICT IN FLORIDA

Decision of Proposed Further Amendment of the Marketing Agreement and Order

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule.

SUMMARY: This decision would amend the Federal marketing agreement and order for fresh grapefruit grown in the Interior District in Florida. Growers of such fruit will vote in a referendum to determine if they favor the proposed changes in the order. The proposed amendment would: (1) Make provision for selecting an administrative committee separate from order 905 (7 CFR Part 905), and provide for a public member on such committee; (2) change the definition of the standard unit of measure; and (3) provide for including offshore export shipments in the computation of handlers' prorate bases.

DATE: The representative period for purposes of the referendum herein ordered is August 1, 1977, through July 31, 1978.

FOR FURTHER INFORMATION CONTACT:

Charles R. Brader, 202-447-6393.

SUPPLEMENTARY INFORMATION: Prior documents in this proceeding: Notice of hearing, issued March 30, 1978; published April 5, 1978 (43 FR 14319); notice of recommended decision, issued August 1, 1978; published August 4, 1978 (43 FR 34483).

PRELIMINARY STATEMENT

A public hearing was held upon proposed further amendment of the marketing agreement, as amended, and order No. 913, as amended (7 CFR Part 913), (hereinafter referred to collectively as the "order") regulating the handling of grapefruit grown in the Interior District in Florida. The hearing was held, pursuant ot the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice (7 CFR Part 900), at Lakeland, Fla., on April 20, 1978, pursuant to notice thereof issued on March 30, 1978.

Upon the basis of the evidence introduced at the hearing and the record thereof, the Deputy Adminstrator, Marketing Program Operations, on August 1, 1978, filed with the Hearing Clerk, U.S. Department of Agriculture, his recommended decision containing notice of the opportunity to file written exceptions thereto. No exception was filed.

The material issues, findings and conclusions, rulings, and general findings of the recommended decision set forth in the FEDERAL REGISTER (FR Doc. 78-21775; 43 FR 34483) are hereby approved and adopted as the material issues, findings and conclusions, rulings, and general findings of this decision as if set forth in full herein, subject to correction of inadvertent, grammatical or obvious errors.

Marketing Agreement and order. Annexed hereto and made a part hereof are two documents entitled, respectively, "Marketing Agreement, as further amended, regulating the handling of grapefruit grown in the Interior District in Florida", and "Order amending the order, as amended, regulating the handling of grapefruit grown in the Interior District in Florida", which have been decided upon as the detailed and appropriate means of effectuating the foregoing conclusions.

It is hereby ordered, That this entire decision, except the annexed marketing agreement, be published in the FEDERAL REGISTER. The regulatory provisions of the marketing agreement are identical with those contained in the order as hereby proposed to be amended by the annexed order which is published with this decision.

Referendum order. It is hereby directed that a referendum be conducted in accordance with the procedure for the conduct of referenda (7 CFR 900.400 et seq.), to determine whether the issuance of the annexed order as amended and as hereby proposed to be amended, regulating the handling of grapefruit grown in the Interior District in Florida is approved or favored by producers, as defined under the terms of the order, who during the representative period were engaged in the production area in the production of the regulated commodity for market.

The representative period for the conduct of such referendum is hereby determined to be August 1, 1977, through July 31, 1978.

The agents of the Secretary to conduct such referendum are hereby designated to be William C. Knope and John R. Toth, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, P.O. Box 9, Lakeland, Fla. 33802, and Malvin E. McGaha, Chief, Fruit Branch, Fruit and Vegetable Division, Agricultural Marketing Service, U.S. Department of Agriculture, Washington, D.C. 20250.

Signed at Washington, D.C. on: October 13, 1978.

P. R. "BOBBY" SMITH,
Assistant Secretary for Marketing Services.

Order[1] amending the order, as amended, regulating the handling of grapefruit grown in the Interior District in Florida.

Findings and determinations. The findings and determinations hereinafter set forth are supplementary and in addition to the findings and determinations previously made in connection with the issuance of the aforesaid order and of the previously issued amendments thereto; and all of said previous findings and determinations are hereby ratified and affirmed, except insofar as such findings and determinations may be in conflict with the findings and determinations set forth herein.

(a) *Findings upon the basis of the hearing record.* Pursuant to the provisions of the Agricultural Marketing Agreement Act of 1937, as amended (7 U.S.C. 601 et seq.), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR Part 900), a public hearing was held upon proposed amendment of the marketing agreement, as amended, and order No. 913, as amended (7 CFR Part 913), regulating the handling of grapefruit grown in the Interior District in Florida.

Upon the basis of the record it is found that:

[1]This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.

(1) The order, as amended, and as hereby further amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the act;

(2) The order, as amended, and as hereby further amended, regulates the handling of grapefruit grown in the production area in the same manner as, and is applicable only to persons in the respective classes of commercial and industrial activity specified in, the marketing agreement and order upon which hearings have been held;

(3) The order, as amended, and as hereby further amended, is limited in its application to the smallest regional production area which is practicable, consistently with carrying out the declared policy of the act, and the issuance of several orders applicable to subdivisions of the production area would not effectively carry out the declared policy of the act;

(4) There are no differences in the production and marketing of grapefruit grown in the production area which make necessary different terms and provisions applicable to different parts of such area; and

(5) All handling of grapefruit grown in the production area is in the current of interstate or foreign commerce or directly burdens, obstructs, or affects such commerce.

ORDER RELATIVE TO HANDLING

It is therefore ordered, That on and after the effective date hereof the handling of grapefruit shall be in conformity to an in compliance with the terms and conditions of the order, as hereby amended, as follows:

The provisions of the proposed marketing agreement and order, amending the order, contained in the recommended decision issued by the Deputy Administrator on August 1, 1978, and published in the FEDERAL REGISTER on August 4, 1978, shall be and are the terms and provisions of this order, amending the order, and are set forth in full herein.

1. Section 913.6 is revised to read:

§ 913.6 Handle or ship.

"Handle" or "ship" means to sell or transport grapefruit, or in any other way to place grapefruit in the current of commerce between the regulation area and any point outside thereof.

2. Section 913.7 is revised to read:

§ 913.7 Carton or standard packed carton.

"Carton or standard packed carton" means a unit of measure equivalent to four-fifths (⅘) of a U.S. bushel of grapefruit, whether in bulk or in any container.

3. Sections 913.8 through 913.11 are redesignated as §§ 913.9 through 913.12 and new § 913.8 is inserted reading as follows:

§ 913.8 Producer.

"Producer" is synonymous with "grower" and means any person who is engaged in the production for market of grapefruit in the Interior District and who has a proprietary interest in the grapefruit so produced.

§§ 913.9 through 913.12 [Redesignated from §§ 913.8 through 913.11]

4. Section 913.20 is redesignated as § 913.15 and the following two new sections are inserted:

§ 913.13 Grower districts.

(a) "Grower District 1" shall include the Counties of Hillsborough, Pinellas, Pasco, Hernando, Citrus, Sumter, and Lake.

(b) "Grower District 2" shall include the Counties of Osceola, Orange, Seminole, Alachua, Putnam, St. Johns, Flagler, Marion, Levy, Duval, Nassau, Baker, Union, Bradford, Columbia, Clay, Gilchrist, and Suwannee, and County Commissioner's Districts 1, 2, and 3 of Volusia County, and that part of the Counties of Indian River and Brevard which is included in the Interior District.

(c) "Grower District 3" shall include the Counties of Manatee, Sarasota, Hardee, Highlands, Okeechobee, Glades, De Soto, Charlottee, Lee, Hendry, Collier, Monroe, Dade, Broward, and the parts of the Counties of Palm Beach and Martin which are included in the Interior District.

(d) "Grower District 4" shall include the County of Polk.

§ 913.14 Redistricting.

(a) The committee may, with the approval of the Secretary, redefine the grower districts into which the Interior District is divided or reapportion or otherwise change the grower membership of grower districts, or both: *Provided,* That the membership shall consist of at least six but not more than seven grower members, and any such change shall be based, so far as practicable, upon the respective averages for the immediately preceding five fiscal periods of (1) the volume of grapefruit shipped from each grower district; (2) the total number of acres of grapefruit in each such district; and (3) the volume of grapefruit produced in each such district.

(b) The committee shall consider such redistricting and reapportionment during the 1980-81 fiscal period, and only in each fifth fiscal period thereafter, and each such redistricting or reapportionment shall be announced on or before March 1 of the then current fiscal period.

5. Redesignated § 913.15 is revised to read as follows:

§ 913.15 Establishment and membership.

(a) There is hereby established an Interior Grapefruit Marketing Committee consisting of at least 6 but not more than 7 grower members, and 6 shipper members. Grower members shall be persons who are not shippers or employees of shippers. Shipper members shall be shippers or employees of shippers. The committee may be increased by one non-industry member nominated by the committee and selected by the Secretary. The committee, with the approval of the Secretary, shall prescribe qualifications, term of office, and the procedure for nominating the non-industry member.

(b) Each member shall have an alternate who shall have the same qualifications as the member for whom he or she is an alternate.

6. Insert the following new sections:

§ 913.16 Term of office.

The term of office of members and alternate members shall begin on the first day of August and continue for 1 year and until their successors are selected and have qualified. The consecutive terms of members shall be limited to three terms. The consecutive terms of office of alternate members shall not be so limited. Members, their alternates, and their respective successors shall be nominated and selected by the Secretary as provided in § 913.17.

§ 913.17 Nominations.

(a) *Grower members.* (1) The committee shall give public notice of a meeting of producers in each grower district to be held not later than July 10 of each year, for the purpose of making nominations for grower members and alternate grower members. The committee, with the approval of the Secretary, shall prescribe uniform rules to govern such meetings and the balloting thereat. The chairman of each meeting shall publicly announce at such meeting the names of the persons nominated, and the chairman and secretary of each such meeting shall transmit to the Secretary their certification as to the number of votes so cast, the names of the persons nominated, and such other information as the Secretary may request. All nominations shall be submitted to the Secretary on or before the 20th day of July.

(2) Each nominee shall be a producer in the grower district from which he is nominated. In voting for nominees, each producer shall be entitled to cast one vote for each nominee in each of the districts in which he or she is a producer. At least two of the nominees for member and their alternates shall be affiliated with a bona fide cooperative marketing organization, and at least two member nomi-

nees and their alternates shall not be so affiliated.

(b) *Shipper members.* (1) The committee shall give public notice of a

(c) *Successor shipper members.* From the nominations made pursuant to § 913.17(b) or from other qualified persons, the Secretary shall select mem-

period is of the total quantity of fruit so shipped by all handlers during the same fiscal period: *Provided,* That if the computation of the prorate bases

tion, shall be submitted promptly to the Secretary.

§ 913.42 Issuance of volume regulation.

tion. The prorate base for each such handler shall be computed by adding together the handler's shipments of grapefruit to destinations outside the

[1505-01-M]

nees and their alternates shall not be so affiliated.

(b) *Shipper members.* (1) The committee shall give public notice of a meeting for bona fide cooperative marketing organizations which are handlers, and a meeting for other handlers who are not so affiliated, to be held not later than July 10 of each year, for the purpose of making nominations for shipper members and their alternates. The committee, with the approval of the Secretary, shall prescribe uniform rules to govern each such meeting and balloting thereat. The chairman of each such meeting shall publicly announce at the meeting the names of the persons nominated and the chairman and secretary of each such meeting shall transmit to the Secretary their certification as to the number of votes cast, the weight by volume of those shipments voted, and such other information as the Secretary may request. All nominations shall be submitted to the Secretary on or before the 20th day of July.

(2) Nominations of at least two members and their alternates shall be made by bona fide cooperative marketing organizations which are handlers. Nominations of at least two members and their alternates shall be made by handlers who are not so affiliated. In voting for nominees, each handler or his or her authorized representative shall be entitled to cast one vote, which shall be weighted by the volume of fruit shipped by such handler during the then current fiscal period.

§ 913.18 Selection.

(a) The initial members of the committee and their respective alternates shall be the members and alternates of the Citrus Administrative Committee under Order No. 905 (7 CFR Part 905) who are representing the Interior District and who are serving on the effective date of this amendment. Each member and alternate shall serve until a successor has been selected and qualified.

(b) *Successor grower members.* From the nominations made pursuant to § 913.17(a) or from other qualified persons, the Secretary shall select one member and one alternate member each to represent Grower Districts 2 and 3, two members and two alternates to represent Grower District 1, three members and three alternates to represent Grower District 4, or such other number of members and alternate members from each district as may be prescribed pursuant to § 913.14. At least two such members and their alternates shall be affiliated with bona fide cooperative marketing organizations, and at least two such members and their alternates shall not be so affiliated.

(c) *Successor shipper members.* From the nominations made pursuant to § 913.17(b) or from other qualified persons, the Secretary shall select members and alternates of the committee. At least two members and their alternates shall represent bona fide cooperative marketing organizations which are handlers, and at least two members and their alternates shall represent handlers who are not so affiliated.

§ 913.19 Failure to nominate.

In the event nominations for a member or alternate member of the committee are not made pursuant to the provisions of § 913.17, the Secretary may select such member or alternate member without regard to nominations.

§ 913.20 Acceptance of membership.

Any person selected by the Secretary as a member or alternate member of the committee shall qualify by filing a written acceptance with the Secretary within 10 days after being notified of such selection.

§ 913.20 [Redesignated as § 913.15]

7. Section 913.21 is revised to read:

§ 913.21 Inability of members to serve.

(a) An alternate for a member of the committee shall act in the place and stead of such member (1) in his or her absence, or (2) in the event of his or her removal, resignation, disqualification, or death, and until a successor for his or her unexpired term has been selected.

(b) In the event of the death, removal, resignation, or disqualification of any person selected by the Secretary as a member or an alternate member of the committee, a successor for the unexpired term of such person shall be selected by the Secretary. Such selection may be made without regard to the provisions of this part as to nominations.

8. Section 913.31 is revised to read:

§ 913.31 Assessments.

(a) Each handler who first handles fruit shall pay to the committee, upon demand, such handler's pro rata share of the expenses which the Secretary finds are reasonable and likely to be incurred by such committee for its maintenance and functioning during each fiscal period. Each such handler's share of such expenses shall be that proportion thereof which the total quantity of fruit shipped to destinations outside the regulation area but within the 48 contiguous States of the United States (including the District of Columbia), Canada, or Mexico by such handler as the first handler thereof during the applicable fiscal period is of the total quantity of fruit so shipped by all handlers during the same fiscal period: *Provided,* That if the computation of the prorate bases of handlers includes all fruit handled as specified pursuant to § 913.43(e), each handler's pro rata share shall be the proportion his or her total shipments bear to the total shipments of all handlers. The Secretary shall fix the rate of assessment per standard packed carton of fruit to be paid by each such handler. The payment of assessments for the maintenance and functioning of the committee may be required under this part throughout the period it is in effect irrespective of whether particular provisions thereof are suspended or become inoperative.

(b) At any time during or after the fiscal period, the Secretary may increase the rate of assessment so that the sum of money collected pursuant to the provisions of this section shall be adequate to cover the said expenses. Such increase shall be applicable to all fruit shipped to the applicable destinations during the given fiscal period. In order to provide funds to carry out the functions of the committee, handlers may make advance payment of assessments.

9. Sections 913.41 and 913.42 are revised to read:

§ 913.41 Recommendation for volume regulation.

(a) The committee may, during any week, recommend to the Secretary the total quantity of grapefruit which it deems advisable to be handled to destinations outside the regulation area but within the 48 contiguous States of the United States (including the District of Columbia), Canada, or Mexico during the next succeeding week: *Provided,* That volume regulations shall not be recommended after such regulations have been effective for an aggregate of 14 weeks during any fiscal period.

(b) In making its recommendation, the committee shall give due consideration to the following factors:

(1) Market prices for grapefruit;

(2) Supply, maturity, and conditions of grapefruit in the production area;

(3) Market prices and supplies of citrus fruits from competitive producing areas, and supplies of other competitive fruits;

(4) Trend and level in consumer income; and

(5) Other relevant factors.

(c) At any time during a week for which the Secretary, pursuant to § 913.42, has fixed the quantity of grapefruit which may be so handled, the committee may recommend to the Secretary that such quantity be increased for such week. Each such recommendation, together with the committee's reason for such recommendation, shall be submitted promptly to the Secretary.

§ 913.42 Issuance of volume regulation.

Whenever the Secretary finds, from information submitted by the committee, or from other available information, that to limit the quantity of grapefruit which may be handled to destinations outside the regulation area but within the 48 contiguous States of the United States (including the District of Columbia), Canada, or Mexico during a specified week will tend to effectuate the declared policy of the act, he shall fix such quantity: *Provided,* That such regulations during each fiscal period shall not in the aggregate limit the volume of grapefruit shipments for more than 14 weeks. The quantity so fixed for any week may be increased by the Secretary at any time during such week. Such regulations may, as authorized by the act, be made effective irrespective of whether the season average price of grapefruit is in excess of the parity price of grapefruit specified therefor in the act. The Secretary may upon the recommendation of the committee, or upon other available information, terminate or suspend any regulation at any time.

10. Section 913.43 is revised to read:

§ 913.43 Prorate bases.

(a) Each person who desires to handle grapefruit shall submit to the committee, at such time and in such manner as may be designated by the committee, and upon forms made available by it, a written application for a prorate base and for allotments as provided in this section and § 913.44.

(b) Such application shall be substantiated in such manner and shall be supported by such information as the committee may require.

(c) The committee shall determine the accuracy of the information submitted pursuant to this section. Whenever the committee finds that there is an error, omission, or inaccuracy in any such information, it shall correct the same and shall give the person who submitted the information a reasonable opportunity to discuss with the committee the factors considered in making the correction.

(d) Each week during the marketing season when volume regulation is likely to be recommended for the following week, the committee shall compute a prorate base for each handler who has made application in accordance with the provisions of this section. The prorate base for each such handler shall be computed by adding together the handler's shipments of grapefruit to destinations outside the regulation area in the 48 contiguous States of the United States (including the District of Columbia), Canada, or Mexico in the current season and his shipments to such destinations in the immediately preceding seasons, if any, within the representative period, in which he shipped grapefruit and dividing such total by a divisor computed by adding together the number of weeks elapsed in the current season and 51 weeks for each of such immediately preceding seasons within the representative period in which the handler so shipped grapefruit. For purposes of this section "representative period" means the three preceding seasons together with the current season; the term "season" means the 51 week period beginning with the first full week in August of any year; and the term "current season" means the period beginning with the first full week in August of the current fiscal period through the fourth full week preceding the week of regulation: *Provided,* That when official shipping records are available to the committee the term "current season" shall extend through the third full week preceding the week of regulation.

(e) If the committee determines that it is desirable and appropriate to include in the computation of prorate bases of handlers all grapefruit handled during the representative period by each handler applicant, it may, upon the approval of the Secretary, include all such fruit in such computation.

§ 913.12 [Redesignated from § 913.11 and Amended]

11. Section 913.11 *Interior district or district* (herein redesignated as § 913.12 *Interior district or district*) contains two erroneous references to "Township 18"; such references are corrected to read "Township 15".

§ 913.45 [Amended]

12. In § 913.45 *Overshipment* the references to "500 boxes" and "1,000 boxes", respectively, are changed to "1,000 cartons" and "2,000 cartons", respectively.

TRANSITION AREA, FAIRBURY, NEBR.

Proposed Designation

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: This Notice proposes to designate a 700-foot transition area at Fairbury, Nebr., to provide controlled airspace for aircraft executing a new instrument approach procedure to the Fairbury Municipal Airport, Fairbury, Nebr., which is based on a non-directional radio beacon (NDB) navigational aid installed on the airport.

DATES: Comments must be received on or before November 22, 1978.

ADDRESSES: Send comments on the proposal to: Federal Aviation Administration, Chief, Operations, Procedures and Airspace Branch, Air Traffic Division, ACE-530, 601 East 12th Street, Kansas City, Mo. 64106, telephone 816-374-3408. The official docket may be examined at the Office of the Regional Counsel Central Region, Federal Aviation Administration, room 1558, 601 East 12th Street, Kansas City, Mo. An informal docket may be examined at the Office of the Chief, Operations, Procedures and Airspace Branch, Air Traffic Division.

SUPPLEMENTARY INFORMATION:

COMMENTS INVITED

Interested persons may participate in the proposed rulemaking by submitting such written data, views or arguments as they may desire. Communications should identify the airspace docket number, and be submitted in duplicate to the Operations, Procedures and Airspace Branch, Air Traffic Division, Federal Aviation Administration, 601 East 12th Street, Kansas City, Mo. 64106. All communications received on or before Nov. 22, 1978, will be considered before action is taken on the proposed amendment. The proposal contained in this Notice may be changed in light of the comments received. All comments received will be available both before and after the closing date for comments in the Rules Docket for examination by interested persons.

AVAILABILITY OF NPRM

Any person may obtain a copy of this NPRM by submitting a request to the Federal Aviation Administration, Operations, Procedures and Airspace Branch, 601 East 12th Street, Kansas City, Mo. 64106 or by calling 816-374-3408. Communications must identify the notice number of this NPRM. Persons interested in being placed on a mailing list for furtner NPRMs should also request a copy of Advisory Circular No. 11-2 which describes the application procedure.

THE PROPOSAL

The FAA is considering an amendment to Subpart G, section 71.181 of the Federal Aviation Regulations (14 CFR 71.181) by designating a 700-foot transition area at Fairbury, Nebr. To enhance airport usage by providing instrument approach capability to the Fairbury Municipal Airport, the City of Fairbury, Nebr., has installed an NDB on the airport. This radio facility provides new navigational guidance for aircraft utilizing the airport. The establishment of a new instrument approach procedure based on this navigational aid entails the designation of a transition area at Fairbury, Nebr., at and above 700 feet above ground level (AGL) within which aircraft are provided air traffic control service. The intended effect of this action is to insure segregation of aircraft using the approach procedure under instrument flight rules (IFR) and other aircraft operating under visual flight rules (VFR). Accordingly, the Federal Aviation Administration proposes to amend Subpart G, section 71.181 of the Federal Aviation Regulations (14 CFR 71.181) as republished on January 3, 1978 (43 FR 440), by adding the following new transition area:

FAIRBURY, NEBR.

That airspace extending upward from 700 feet above the surface within a 5-mile radius of the Fairbury Municipal Airport (latitude 40°10'59" N, longitude 97°90'54" W). Within 3 miles each side of the 173° course, extending 3 miles north from the 5-mile radius; within 2 miles each side of the 192° course extending 3 miles north, from the 5-mile radius.

(Sec. 307(a), Federal Aviation Act of 1958 as amended (49 U.S.C. 1348); Sec. 6(c), Department of Transportation Act (49 U.S.C. 1655(c)); Sec. 11.61 of the Federal Aviation Regulations (14 CFR 11.61)

NOTE.—The FAA has determined that this document involves a proposed regulation which is not considered to be significant under the procedures and criteria prescribed by Executive Order 12044 and as implemented by interim Department of Transportation guidelines (43 FR 9582; March 8, 1978).

Issued in Kansas City, Mo., on October 6, 1978.

JOHN E. SHAW,
Acting Director, Central Region.

[6750-01-M]

FEDERAL TRADE COMMISSION

[16 CFR Part 419]

GAMES OF CHANCE IN THE FOOD RETAILING AND GASOLINE INDUSTRIES

Proposed Amendment of Trade Regulation Rule To Modify Hiatus Provision

AGENCY: Federal Trade Commission.

ACTION: Notice of proposed amendment of trade regulation rule.

SUMMARY: The Commission is proposing to amend the existing trade regulation rule for games of chance for the food retailing and gasoline industries by modifying paragraph (f) commonly known as the "Hiatus Provision." This provision currently requires that no new game can be promoted or used without a break in time between the new game and the game previously used in the same establishment equal to the duration of the game previously used.

The Commission's proposed modification will limit the length of the hiatus to thirty (30) days or the duration of the previous game, whichever is less.

This notice sets out the procedures to be followed, the text of the proposed rule, a list of general questions and issues upon which the Commission particularly desires comment and testimony, an invitation for written comments, and instructions for prospective witnesses and other interested persons who desire to testify or otherwise participate in the proceedings.

DATES: Notification of interest on or before November 15, 1978. Written comments and available exhibits on or before November 30, 1978. Prepared statements on or before December 15, 1978. Public hearings commence January 3, 1979, in Washington, D.C.

ADDRESSES: Send comments to the Federal Trade Commission, Cleveland Regional Office, Suite 500, The Mall Building, 118 St. Clair Avenue, Cleveland, Ohio 44114. Public hearing: The public hearing will commence at 9 a.m. in Room 332 of the Federal Trade Commission Building, Pennsylvania Avenue and Sixth Street NW., Washington, D.C. Persons desiring to present oral views at the hearing should advise Mr. Dennis Hynes, Presiding Officer, Federal Trade Commission, Washington, D.C. 20580.

FOR FURTHER INFORMATION CONTACT:

Noble Jones, Consumer Protection Specialist, Federal Trade Commission, Suite 500, the Mall Building, 118 St. Clair Avenue, Cleveland, Ohio 44114, 216-522-5207.

SUPPLEMENTARY INFORMATION: The Commission is proposing to modify the "hiatus provision" (16 CFR 419.1(f)) requirement of the Trade regulation rule on games of chance for food retailing and gasoline industries. The primary reason for modifying this provision is the lack of support for the underlying rationale of the provision as it currently operates. In addition, the Commission has granted petitions for an exemption from the "Hiatus Provision" and is persuaded at this time to consider an amendment to the rule.

SECTION A. PROPOSED AMENDMENT OF TRADE REGULATION RULE

Notice is hereby given that the Federal Trade Commission, pursuant to the Federal Trade Commission Act, as amended, 15 U.S.C. 41, et seq., the provisions of part I, subpart B of the Commission's procedures and rules of practice, 16 CFR 1.7, et seq., and section 553 of subchapter II, chapter 5, title 5 of the United States Code (Administrative Procedure) has initiated a proceeding for the amendment of the Trade regulation rule for games of chance in the food retailing and gasoline industries. The Commission has determined, pursuant to 16 CFR 1.20, to follow the procedures set forth in this notice for this proceeding.

Accordingly, the Commission has proposed the following amendment to 16 CFR 419 by replacing old § 419.1(f) with new § 419.1(f) as follows:

§ 419.1 The Rule.

• • • • •

(f) Promote or use any new game without a break in time between the new game and any game previously employed in the same establishment equivalent to the duration of the game previously employed, or 30 days, whichever is less.

SECTION B. REASONS FOR AMENDMENT OF THE RULE

Section 419.1(f) of the Trade regulation rule for games of chance in the food retailing and gasoline industries prohibits the promotion or use of any new game without a break in time between the new game and any game previously employed in the same establishment equal to the duration of the previously employed game. During the course of the hearings on the rule, there was very little evidence dealing directly with problems addressed by the "Hiatus provision." Nevertheless, at he time of the promulgation of the rule in October 1969, the Commission was of the opinion that a potential for confusion and deception existed in the consecutive use of games by a retail establishment, with no interval between the games. The Commission stated:

> With games running on the heels of each other, participants could easily become confused as to the prize structure, odds, and redemption right of the game then in progress.[1]

In August of 1972, the Commission, in response to a request from a member of the games-producing industry, issued an interpretation of the "Hiatus provision." At that time the Commission ruled that repetition of the same game as previously employed would not be inconsistent with § 419.1(f) of the rule. Further, the Commission was convinced that:

> Repetition of the identical game without an interval would not confuse the participants as to the prize structure, odds, and redemption rights.[2]

In July of 1976, the Federal Trade Commission received from Fox Grocery Co. ("Fox") a petition for a one-time exemption from § 419.1(f) of the Commission's Trade regulation rule for games of chance in the food retailing and gasoline industries (16 CFR 419.1).[3] The petition requested that the Commission grant a waiver of the "hiatus provision" in order to enable a group of independently-owned food stores to enter into a game promotion simultaneously.

---

[1] Statement of basis and purpose of trade regulation rule for games of chance in the food retailing and gasoline industries, 34 FR 13310 (1969).

[2] Federal Trade Commission News Release, August 1, 1972 (copy attached).

[3] A copy of the petition can be obtained from Public Reference Branch, Room 130, Federal Trade Commission, Washington, D.C. 20580.

The Commission concluded that more than a 30 day hiatus period between games was not required to eliminate confusion and deception in the consecutive use of games by Fox or its participating establishments under the circumstances.[4] The Commission has granted a similar petition to FNK Enterprises.[5] Most recently, the Commission has granted a temporary blanket exemption to the operation of paragraph (f) to all marketers and users of supermarket games pending the outcome of this proceeding.

SECTION C. INVITATION TO COMMENT ON AMENDMENT OF THE TRADE REGULATION RULE

All interested parties are hereby notified that they may submit to the Federal Trade Commission, Cleveland Regional Office, Suite 500, The Mall Building, 118 St. Clair Avenue, Cleveland, Ohio 44114, written data, views, or arguments on any issues of fact, law or policy, which may have some bearing on the proposed modification of 16 CFR 419.1(f).

The Commission requests that persons commenting on this subject address the following issue:

> Should the proposed amendment be changed in any way? Specifically, should the hiatus period be eliminated?

In all comments, the Commission particularly welcomes empirical evidence.

Written comments will be accepted until November 30, 1978. To assure prompt consideration of all comments, it should be identified as "Games of Chance Amendment Comment" and, when feasible and not burdensome, submitted in five copies.

SECTION D. PUBLIC HEARINGS

Public hearings will be held commencing on January 3, 1979, at 9 a.m. in Room 332 of the Federal Trade Commission Building, Pennsylvania Avenue and Sixth Street NW., Washington, D.C. Persons desiring to present their views orally at the hearings should so advise Dennis Hynes, Presiding Officer, Federal Trade Commission, Washington, D.C. 20580, no later than November 15, 1978.

SECTION E. INSTRUCTIONS TO WITNESSES

1. Advance notice. If you wish to testify at the hearings, you must notify the presiding officer of your desire to appear and file with him your complete, word-for-word statement no later than December 15, 1978. This advance notice is required so that other interested persons can determine the need for examination and have an opportunity to prepare. Any examination which is permitted will be conducted with regard to the written testimony, which will be entered into the record exactly as submitted. Consequently, it will not be necessary for you to repeat this statement at the hearing. You may simply appear to answer questions with regard to your written statement or you may deliver a short summary of the most important aspects of that statement within time limits to be set by the presiding officer. As a general rule, such oral summaries should not exceed 10 minutes.

2. *Use of exhibits.* Use of exhibits during oral testimony is encouraged, especially when they are to be used to help clarify technical or complex matters. If you plan to offer documents as exhibits, file them as soon as possible during the period for submission of written comments so they can be studied by other interested persons. Such documents that may be unavailable to you during this period must be filed as soon as possible thereafter and not later than the deadline for filing prepared statements. Mark each of the documents with your name, and number them in sequence, e.g., Jones exhibit 1. The presiding officer has the power to refuse to accept for the public record any hearing exhibits that are not furnished by the deadline.

3. *Expert witnesses.* If you are going to testify as an expert witness, you must attach to your statement a curriculum vita, biographical sketch, résumé or summary of your professional background and a bibliography of your publications. It would be helpful if you would also include documentation for the opinions and conclusions you express by footnotes to your statements or in separate exhibits. If your testimony is based upon or chiefly concerned with one or two major scientific works, copies should be furnished. The remaining citations to other works can be accomplished by using footnotes in your statement referring to those works.

4. *Results of surveys and other research studies.* If in your testimony you will present the results of a survey or other research study, as distinguished from simple references to previously published studies conducted by others, you must also present as an exhibit or exhibits in compliance with paragraph 2, above, the following:

(a) A complete report of the survey of other research study and the information and documents listed in (b) through (e) if they are not included in that report.

(b) A description of the sampling procedures and selection process including the number of persons contacted, the number of interviews completed, and the number of persons

---

[4] 41 FR 48516 (1976).

[5] 43 FR 25336 (1978).

V 4 3 / 2 0 3 0 C 1 9 7 8

who refused to participate in the survey.

(c) Copies of all completed questionnaires or interview reports used in conducting the survey or study if respondents were permitted to answer questions in words of their choice rather than to select an answer from one or more answers printed on the questionnaire or suggested by the interviewer.

(d) A description of the methodology used in conducting the survey or other research study including the selection of and instructions to interviewers, introductory remarks by interviewers to respondents and a sample questionnaire or other data collection instrument.

(e) A description of the statistical procedures used to analyze the data and all data tables which underlie the results reported.

Other interested persons may wish to examine the questionnaires, data collection forms and any other underlying data not offered as exibits and which serve as a basis for your testimony. This information along with punch cards or computer tapes which were used to conduct analyses should be made available (with appropriate explanatory data) upon request of the presiding officer. The presiding officer will then be in a position to permit their use by other interested persons or their counsel.

5. *Identification, number of copies, and inspection.* To assure prompt consideration, all materials filed by prospective witnesses pursuant to the instructions contained in paragraphs 1-4, above, should be identified as "games of chance statement" ("and exhibits," if appropriate), and submitted in five copies when feasible and not burdensome.

Copies of all materials filed by witnesses will be made available for examination in Room 130, Public Reference Room, Federal Trade Commission, Pennsylvania Avenue and Sixth Street NW., Washington, D.C.

6. *Reason for requirements.* The foregoing requirements are necessary to permit us to schedule the time for your appearances and that of other witnesses in an orderly manner. Other interested parties must have your expected testimony and supporting documents available for study before the hearing so they can decide whether to examine or cross-examine your file rebuttals. If you do not comply with all of the requirements, the presiding officer has the power to refuse to let you testify.

7. *General procedures.* These hearings will be informal and courtroom rules of evidence will not apply. You will not be placed under oath unless the presiding officer so requires. You are also not required to respond to any question outside the area of your written statement, although, if such questions are permitted, you may respond if you feel you are prepared and have something to contribute. The presiding officer will assure that all questioning is conducted in a fair and reasonable manner and will allocate time according to the number of parties participating, the legitimate needs of each group for full and true disclosure, and the number and nature of the factual issues discussed. The presiding officer further has the right to limit the number of witnesses to be heard if the orderly conduct of the hearing so requires.

The deadlines established by this notice will not be extended and hearing dates will not be postponed unless hardship to participants can be demonstrated.

SECTION F. NOTIFICATION OF INTEREST

Interested persons who wish to avail themselves of the opportunity to question witnessed must, by October 31, 1978, notify the presiding officer of their position with respect to the porposed rule and each individual provision thereof. This notification must be in sufficient detail to enable the presiding officer to identify groups with the same of similar interests respecting the proposed rule and the presiding officer may require the submission of additional information from any applicant whose notification is inadequate. Failure to file an adequate notification in sufficient detail may result in the applicant not being considered for purposes of direct and cross-examination.

Before the hearing commence, the presiding officer will identify groups with the same or similar interests in the proceeding. Such groups will be required to select a single representative for the purpose of conducting direct or cross-examination and, if unable to make this selection, the presiding officer may select a representative of each such group. The presiding officer will notify all interested persons of the identity of the group representatives at the earliest practicable time.

SECTION G. POSTHEARING PROCEDURES

Interested persons will be afforded 30 days after the close of the hearings to file rebuttal submissions. Rebuttal presentations shall be permitted only if the presiding officier determines that the presentation of rebuttal submissions is required for a full and true disclosure with respect to any disputed issue of fact that is material and necessary to resolve. Rebuttal submissions must be based only upon identified, properly cited matters already in the record. The presiding officer will reject all submissions which are essentially additional written comment in contrast to rebuttal. The 30-day rebuttal period is intended to include the time consumed in securing a complete transcript.

SECTION H. RULEMAKING RECORD

In view of the substantial rulemaking records that have been established in prior trade regulation rulemaking proceedings (and the consequent difficulty in reviewing such records), the Commission urges all interested persons to consider the relevance of any material before placing it on the rulemaking record. While the Commission encourages comments on its proposed rule, the submission of material that is not generally probative of the issues posed by the proposed rule merely overburdens the rulemaking record and decreases its usefulness, both to those reviewing the record and to interested persons using it during the course of the proceeding. The Commission's rulemaking staff has received similar instructions. Material that the staff has obtained during the course of its investigation prior to the initiation of the rulemaking proceeding that is not placed in the rulemaking record will be made available to the public, to the extent that it is considered to be nonexempt from disclosure under the Freedom of Information Act, 5 U.S.C. Section 552.

SECTION I. COMPENSATION FOR REPRESENTATION IN RULEMAKING PROCEEDINGS

Pursuant to section 18(h) of the FTC Act, funds may be available for reimbursement of public participation costs incurred in this proceeding to those who satisfy the requirements of section 1.17 of the Commission's rules. For further information, contact Bonnie Naradzay, Special Assistant for Public Participation, Office of the General Counsel, Federal Trade Colmmission, Sixth Street and Pennsylvania Avenue, NW., Washington, D.C. 20580, 202—523-3520.

Issued: October 10, 1978.

By direction of the Commission.

CAROL M. THOMAS,
Secretary.

SUSQUEHANNA RIVER BASIN COMMISSION

[18 CFR Part 801]

FREEDOM OF INFORMATION

Proposed General Policies

AGENCY: Susquehanna River Basin Commission.

ACTION: Proposed rule and opportunity for written comment.

SUMMARY: The Susquehanna River Basin Commission proposes to amend its regulations by adding freedom of information policy provisions. Under the proposed amendment, records and materials of the Commission, other than those specifically exempted by the regulation, may be inspected and copied by members of the public, and a procedure is established governing the method of making requests, the charging of fees, the denial of access to records, and appeals from denial of access to records. The regulation is intended to assure the public availability of Commission records, consistent with the Susquehanna River Basin compact and the policies of the signatory parties.

DATE: Written comments must be submitted no later than Friday, November 10, 1978.

ADDRESSES: Written comments should be sent to the Office of the Executive Director, Susquehanna River Basin Commission, 1721 North Front Street, Harrisburg, Pa. 17102.

FOR FURTHER INFORMATION CONTACT:

Robert J. Bielo, Executive Director, Susquehanna River Basin Commission, 1721 North Front Street, Harrisburg, Pa. 17102, 717-238-0422.

Written comments are invited and may be submitted to the address given above no later than the date given above. The Commission does not anticipate holding a public hearing on the proposed policy.

Dated: October 11, 1978.

ROBERT J. BIELO,
Executive Director.

It is proposed to amend 18 CFR Part 801 by adding new §§ 801.21–801.25 and centerhead to read as follows:

FREEDOM OF INFORMATION POLICY

Sec.
801.21 Purpose and scope.
801.22 Responsible officials.
801.23 Procedure for requests.
801.24 Schedule of fees.
801.25 Denial of access to records and appeals.

AUTHORITY: Secs. 3:1, 3.5(1), and 15.2, Pub. L. 91-575 (84 Stat. 1509 et seq.)

FREEDOM OF INFORMATION POLICY

§ 801.21 Purpose and scope.

(a) This policy is to assure the public availability of Commission records, consistent with the Susquehanna River Basin compact and the policies of the signatory parties thereto. It does not apply to publications and materials prepared for routine distribution to the public.

(b) Records and materials other than those exempted herein may be inspected and copied according to the procedure described in § 801.23. This policy does not apply to matters which are:

(1) Related solely to the internal personnel rules and practices;

(2) Specifically exempted from disclosure by statute;

(3) Trade secrets and commercial or financial information obtained from a person and priviledged or confidential;

(4) Interagency or intraagency memorandums or letters which would not be available by law to a party other than a private party or an agency in litigation with the Commission;

(5) Personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;

(6) Investigatory records compiled for law enforcement purposes but only to the extent that the production of such records would (i) interfere with enforcement proceedings, (ii) deprive a person of a right to a fair trial or an impartial adjudication, or (iii) constitute an unwarranted invasion of personal privacy, (iv) disclose the indentity of a confidential source, (v) disclose investigative techniques and procedures, or (vi) endanger the life or safety of law enforcement personnel;

(7) Geological and geophysical information and data, including maps, concerning wells; and

(8) Records and data which would impair present or imminent contract awards.

Any reasonably segregable portion of a record shall be provided to any person requesting such record after deletion of the portions which are exempt under this subsection.

§ 801.22 Responsible officials.

(a) The Executive Director is responsible for insuring appropriate agency response to public requests for access to records.

(b) The Chief Administrative Officer shall insure that personnel:

(1) Assist the requester in identifying requested records, if necessary.

(2) Upon locating the records, take one of the following actions:

(i) Make records available for inspection; or

(ii) Deny access to the records in whole or in part and explain in writing the reasons therefor.

(3) Upon request for copies of records:

(i) Make a copy available upon payment or offer to pay established fees, if any, in accordance with § 801.24; or

(ii) Permit the requester to copy those records.

(4) Upon request, certify that a record is a true copy.

(c) The designation of the Chief Administrative Officer shall not be construed to prohibit employees who have in the past been authorized to make records or information available to the public from continuing to do so.

§ 801.23 Procedure for requests.

(a) A member of the public who requests records or materials from the Commission must provide a reasonable description of the records or materials sought so that such records or materials may be located without undue search or inquiry. A written request may be required, but oral requests may be accepted when records are readily available.

(b) Requests which reasonably describe the records or materials sought should be directed to the Executive Director, Susquehanna River Basin Commission, 1721 North Front Street, Harrisburg, Pa. 17102.

(c) A response shall be given promptly regarding any request reasonably describing the record or records sought. If the requester is not provided or denied access to the record sought within a reasonable period of time, a written acknowledgment of the request shall be furnished the requester along with a statement of the approximate date when the request will be granted or denied. If access to records is neither granted nor denied within 10 business days after the date of written acknowledgment of a request, the request may be construed as a denial of access that may be appealed.

(d) Records or materials will be available for inspection and copying in person during normal business hours.

(e) Requests for records which originate in other matters which

within 7 business days following the next Commission meeting.

mission sought to determine the interest in, and the need for, stereophonic broadcasting by AM stations through a notice of inquiry. A list of questions

V 43 / 203 OCT 19 78

(d) Records or materials will be available for inspection and copying in person during normal business hours.

(e) Requests for records which originate in or concern matters which originate in another department or agency may be forwarded to the department or agency primarily concerned and the requester so notified.

§ 801.24 Schedule of fees.

(a) Fees will be charged in the case of requests which are determined by the Chief Administrative Officer to involve a burden on staff or facilities significantly in excess of that normally accepted by the Commission in handling routine requests for information.

(b) In all instances where the Chief Administrative Officer determines that a request for information can be considered as primarily benefiting the general public, such request shall be met either without cost wherever practicable or at a reduced cost to the requester. Any such reduction shall be determined by the Chief Administrative Officer on the basis of the balance between the benefit to the general public and the cost to the Commission.

(c) The Commission reserves the right to limit the number of copies of any document that will be provided to any one person.

§ 801.25 Denial of access to records and appeals.

(a) Denial of access to records shall be in writing stating the reason therefore and advising the requester of the right to appeal as provided in (c) below.

(b) If requested records are not provided promptly, such failure shall also be deemed a denial of access.

(c) Appeals shall be submitted in writing to the Executive Director within a reasonable time after denial identifying:

(1) The date of the appeal;

(2) The date of the request for records;

(3) The records to which the requester was denied access;

(4) Whether the denial of access was in writing or due to failure to provide records promptly; and

(5) The name and return address of the requester.

(d) Appeals for denial of access to records shall be evaluated by the Executive Director and General Counsel.

(e) An appeal decision shall be transmitted to the requester in writing within 7 business days following the next Commission meeting.

[FRL 990-5; OPP-300017]

TOLERANCES AND EXEMPTIONS FROM TOLERANCES FOR PESTICIDE CHEMICALS IN OR ON RAW AGRICULTURAL COMMODITIES

Proposed Exemption From the Requirement of a Tolerance for an Inert Ingredient in Pesticide Formulations

AGENCY: Office of Pesticide Programs, Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This notice proposes that the inert ingredient 1,3-benzisothiazolin-3-one in pesticide formulations be exempted from tolerance requirements. The proposal was submitted by ICI United States. This regulation would permit the use of the exempted inert ingredient in pesticide products.

DATE: Comments must be received on or before November 20, 1978.

ADDRESS COMMENTS TO: Federal Register Section, Program Support Division (TS-757), Office of Pesticide Programs, EPA, Room 401, East Tower, 401 M Street SW., Washington, D.C. 20460.

FOR FURTHER INFORMATION CONTACT:

Mr. David Ritter, Toxicology Branch, Hazard Evaluation Division (TS-769), Office of Pesticide Programs, EPA, 202-426-2680.

SUPPLEMENTARY INFORMATION: At the request of ICI United States, Inc., Wilmington, Del. 19897, the Administrator is proposing to amend 40 CFR 180 by exempting from tolerance requirements the inert ingredient 1,2-benzisothiazolin-3-one in pesticide formulations of *O,O*-diethyl *O*-(2-diethylamino-6-methyl-4-pyrimidinyl) phosphorothioate when applied to the raw agricultural commodity melons at no more than 0.1 percent of the formulation.

Inert ingredients are all ingredients which are not active ingredients as defined in 40 CFR 162.3(c) and includes, but is not limited to, the following types of ingredients (except when they have pesticidal efficacy of their own): Solvents such as water; baits such as sugar, starches, and meat scraps; dust carriers such as talc and clay; fillers; wetting and spreading agents; propellants in aerosol dispensers; and emulsifiers. The term inert is not intended to imply nontoxicity; the ingredient may or may not be chemically active.

The preambles to proposed rulemaking documents of this nature include the common or chemical name of the substance under consideration, the name and address of the firm making the request for the exemption, and the toxicological and other scientific bases used in arriving at a conclusion of safety in support of the exemption.

Inert ingredient	Firm	Bases for approval
1,3-Benzisothiazolin-3-one.....	ICI United States, Inc., Wilmington, Del. 19897.	90-d dog and rat studies. Little likelihood of conversion to saccharin under the proposed use and 0.1 pct limit.

This amendment to 40 CFR part 180 pertains to a specific inert ingredient for which there is a prescribed use pattern. This inert cannot be used in any other manner except as specified in the regulation and as determined in a specific product registered by the Agency in accordance with the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA), as amended (86 Stat. 973, 89 Stat. 751, 7 U.S.C. 136(a) et seq.).

Based on the above information, available information on the chemistry of this substance, and a review of its use, it has been found that, when used in accordance with good agricultural practice, this substance is useful and does not pose a hazard to the environment. It is concluded, therefore, that the proposed amendment to 40 CFR part 180 will protect the public health, and it is proposed that the regulation be established as set forth below.

Any person who has registered, or submitted an application for the registration of a pesticide under the Federal Insecticide, Fungicide, and Rodenticide Act which contains the ingredient listed herein may request, on or before November 20, 1978, that this rulemaking proposal be referred to an advisory committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulation. The comments must bear a notation indicating both the subject and the petition/document control number, "PP7E1935/P90." All written comments filed in response to this notice of proposed rulemaking will be available for public inspection in the office of the Federal Register Section from 8:30 a.m. to 4 p.m., Monday through Friday.

Dated: October 12, 1978.

DOUGLAS D. CAMPT,
Acting Director,
Registration Division.

(Sec. 408(e) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 346a(e)).)

It is proposed that part 180, subpart D, be amended by adding the new section 180.1044 to read as follows:

§ 180.1044 1,3-Benzisothiazolin-3-one; exemption from the requirement of a tolerance.

1,3-Benzisothiazolin-3-one is exempt from the requirement of a tolerance when used as a preservative-stabilizer in formulations of *O,O*-diethyl *O*-(2-diethylamino-6-methyl-4-pyrimidinyl) phosphorothioate when applied to the raw agricultural commodity melons at no more than 0.1 percent of the formulation.

FEDERAL COMMUNICATIONS COMMISSION

[47 CFR Part 73]

[Docket No. 21313; RM-2646; RM-2717; RM-3038; RM-3039; RM-3040; FCC 78-638]

AM STEREOPHONIC BROADCASTING

Proposed Rulemaking

AGENCY: Federal Communications Commission.

ACTION: Proposed rulemaking.

SUMMARY: Federal Communications Commission proposes rules for AM stereo broadcasting. Public interest in AM stereo prompts Commission to consider adoption of standards for service.

DATES: Comments must be received on or before December 29, 1978, and reply comments must be received on or before January 31, 1979.

ADDRESS: Federal Communications Commission, Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Gordon W. Godfrey, Broadcast Bureau, 202-632-9660.

Greg DePriest, Broadcast Bureau, 202-632-7792.

SUPPLEMENTARY INFORMATION:

Adopted: September 14, 1978.

Released: October 19, 1978.

In the matter of AM stereophonic broadcasting, docket Nos. 21313, RM-2646, RM-3039, RM-2717, RM-3040, and RM-3038.[1]

1. On June 22, 1977, the Commission adopted a notice of inquiry in this proceeding. It was released in response to petitions for rulemaking filed by Kahn Communications, Inc. (RM-2717), and the Association for AM Stereo, Inc. (RM-2646). These petitions sought changes in the rules to permit the transmission of stereophonic programing by AM broadcast stations. Rather than propose specific rule changes as requested by these petitions, the Commission sought to determine the interest in, and the need for, stereophonic broadcasting by AM stations through a notice of inquiry. A list of questions attached to the inquiry solicited information on the economic, operational, and technical aspects of AM stereo broadcasting. It was hoped that responses to these questions would indicate if the service were practical and if a notice of proposed rulemaking should be issued.

2. In response to the notice, a substantial record has been developed. Comments were filed by over 90 parties, including members of the public, AM broadcast station licensees, broadcast networks, equipment manufacturers, trade organizations, and the Department of Commerce. A list of those filing comments is attached as appendix A below. Two parties, Belar Electronics Laboratory, Inc. and Harris Corp., submitted additional information after the deadline for reply comments. The Commission is accepting these filings despite their lateness and making them a part of the public record. They offer technical observations and data previously unavailable.

3. Four parties submitted complete technical descriptions of systems for AM stereophonic transmissions and each petitioned the Commission to adopt its particular system. The four were Harris Corp. ("Harris") (RM-3040), Belar Electronics Laboratory, Inc. ("Belar"), Motorola, Inc. ("Motorola") (RM-3039), and Maghavox Consumer Electronics Co. ("Magnavox") (RM-3038). In addition to these, comments were submitted regarding the system proposed by Kahn Communications, Inc. ("Hahn/Hazeltine"), one of the two original petitioners.[1a] Partial descriptions of three other systems were submitted by William A. Hayes, Dorchester Laboratories, and Joe Rice. While these latter three systems were alleged to be capable of AM stereo transmission, test data and adequate technical descriptions were not submitted. This prevented serious analysis of them and comparison with the other systems. For this reason they are not discussed further in this document and will not be given further consideration.

4. In addition to the information filed by system proponents, the National AM Stereophonic Radio Committee (NAMSRC) submitted its

[1] See 43 FR 5571, Feb. 9, 1978.

[1a] Hazeltine Corp. acquired exclusive licensing rights under the patents and patent applications of Leonard B. Kahn covering the independent sideband AM stereo system in September of 1977. Hazeltine has licensed Kahn Communications, Inc., to manufacture and sell broadcast transmission equipment using the Kahn AM stereo transmission method. Because of this arrangement, the Commission will henceforth refer to the Kahn AM stereo system as the Kahn/Hazeltine system.

report on tests and analyses of the systems proposed by Magnavox, Motorola, and Belar. The NAMSRC was jointly sponsored by the Electronic In-

meeting any but a reduced stereo separation requirement with any of the systems under consideration. An anal-

V 4 3 / 2 0 3 OCT 19 78

report on tests and analyses of the systems proposed by Magnavox, Motorola, and Belar. The NAMSRC was jointly sponsored by the Electronic Industries Association, the National Radio Broadcasters Association, National Association of Broadcasters, and the Institute of Electrical and Electronics Engineers.

5. Responses to the notice of inquiry express the view that FM stereophonic radio service is inadequate in automobiles and at fairly long distances from broadcast stations. It is further noted that many small communities have only AM stations and thus are lacking local stereophonic radio service. Regarding the possible impact of AM stereo on the continuing development of FM broadcasting, it is reported that in many markets FM stations have already surpassed AM stations in audience and revenue. Many AM licensees claim that AM stereo is needed to keep their stations competitive. Additionally, it is claimed that the stereo performance of FM broadcasts in automobiles is poor due primarily to fading and multipath which should not be a problem with AM stereo.

6. While a few claims were submitted that AM stereophonic broadcasting could become a high fidelity medium, it was generally conceded that the FM broadcasting service has inherent advantages in signal-to-noise ratio and noise rejection. It was felt that while FM would remain the high fidelity medium of choice in most urban homes, many areas without FM stereophonic radio service could receive stereophonic programing for the first time.

7. Each of the AM stereo systems proposed to the Commission is basically similar in that the radio frequency carrier is angle modulated with the difference information of the left and right channels (L−R). The RF carrier containing this information is then amplitude modulated to convey the sum information of the left and right channels (L+R). Theoretically, the structure of the stereo signal is such that monophonic receivers will demodulate the L+R information contained in the envelope of the radiated (angle modulated) carrier in a normal manner. The L−Rstereo information contained in the carrier should be transparent to the monophonic receiver, having no effect on its operation.

8. A brief description of each of the five AM stereo systems follows:

Belar: The Belar system frequency modulates the RF carrier with a preemphasized (100 μsec) L−R signal. A maximum frequency deviation of 1250 Hz is specified. The L+R signal amplitude modulates the carrier in the normal fashion. The Belar system is called an "AM-FM" system.[2]

Harris: The Harris system amplitude modulates two carriers separated in phase by 30°. The left channel modulates one carrier and the right channel modulates the other. The two signals are linearly added to produce a resultant signal. This system is known as a "modified quadrature" type.

Kahn/Hazeltine: The Kahn/Hazeltine system phase modulates the RF carrier with the L−R signal in such a manner that amplitude modulation of the carrier with the L+R signal yields left channel stereo information primarily on the lower sideband and right channel stereo information on the upper sideband. The Kahn/Hazeltine system is known as an "independent sideband" system.

Magnavox: The Magnavox system uses the L−R signal to phase modulate the RF carrier and the L+R signal to amplitude modulate the phase modulated RF carrier. This type of system is known as an "AM-PM" system.

Motorola: The Motorola system amplitude modulates two RF carriers separated in phase by 90°. The L+R signal modulates one and the L−R signal modulates the other. The two signals are then added together, processed by a clipping circuit, and amplitude modulated by the L+R signal. Motorola calls this system a "compatible quadrature" system.

9. The Commission has examined the submissions of all parties filing comments and has concluded that rules should be proposed for the transmission of AM stereo. We are persuaded a great interest in this service exists on the part of broadcasters, and manufacturers of both transmitting and receiving equipment. The body of information developed is sufficient to warrant further investigation of the technical means of providing this service. This should not imply, however, that the Commission is totally committed to adopting standards for AM stereo transmission. Despite the technical submissions, doubts remain concerning the overall compatibility of an AM stereo signal with the present allocation structure and emission requirements. Resolution of these matters to the Commission's satisfaction is necessary before any standards are to be adopted.

10. The purpose of this notice of proposed rulemaking is to propose standards for the transmission of AM stereo by considering the five systems submitted. Comments are requested on the alternative rule amendments (contained in app. B) that are necessary for one of the five systems to be adopted. These comments should address the technical merits of each of the systems with particular emphasis on mathematical and engineering analysis, test data, and the dictates of practical engineering experience. With the exception of the Harris Corp. and rule amendments contained in the appendix are primarily those submitted by the proponents. These have been modified only where typographical or other obvious errors have been detected. Harris failed to submit proposed rule changes and those for its system have been developed by the Commission.

11. Further evaluation of the proposed systems by the Commission will place particular emphasis on the ability of the stereo signal to exist within the present allocation framework, meet present emission requirements, and furnish a compatible signal to existing monophonic receivers. It is the Commission's belief that AM stereo should provide a service of as high a quality as possible while minimizing degradation of the present AM service. Proponents are alerted that at the same time it is appropriate that we consider the performance of these systems under modified AM operational constraints (as discussed in paragraph 22).

12. The remainder of this notice identifies Commission concerns that should be addressed by interested parties, particularly each of the five proponents whose systems are being considered.

13. Of these five, the Commission wishes to express its overall concern with certain characteristics of the Harris and Belar systems. Specifically, filings indicate that the stereo service area of a representative AM station employing the Harris system would encompass only 40 percent of the monophonic service area. The reduced stereo service area appears to be an inherent characteristic of the Harris system which could not be overcome through subsequent advances in technology. We question the desirability of adopting standards for an AM stereo system which offers only a restricted stereo service. (The other systems under consideration do not impose as severe a reduction in the stereo service area versus monophonic service area.)

14. In addition, the Commission notes that the stereo separation achieved by the Harris system during the over-the-air testing was minimal for many portions of the audio spectrum. Our analysis indicates this may also be an inherent characteristic of reduced quadrature systems. Comments are requested on these characteristics of the Harris system in addition to the more specific areas outlined below.

15. Concerning the Belar proposal, we note that the system tested by the NAMSRC caused a considerable reduction in the cochannel protection level associated with monophonic transmissions. Such a reduction violates one of the Commission's guidelines for considering the various proposals, i.e., that the stereo signal must exist within the present allocation framework. However, it appears that this

[2] In late-filed comments Belar suggests that the deviation and preemphasis of this system be changed. See discussion of recommended changes in par. 15.

drawback has been overcome. In a late-filed submission, Belar states that modification of its system's preemphasis time constant and low frequency deviation yield improved performance in this area.[3] The Commission acknowledges these claims. Nonetheless, data should be submitted to verify the improvement in the protection ratio. Other areas in which the change in system parameters affects the results of the tests conducted by the NAMSRC should be discussed. Additional data should be submitted to indicate what new performance is achieved.

16. One of the tests conducted by the NAMSRC sought to determine the effect stereo transmissions would have on protection now afforded AM monophonic stations under the Commission's rules. These tests indicate that the second adjacent channels appear to receive less protection with the AM stereo systems proposed by Magnavox, Motorola, and Belar than with monophonic transmissions. No comparable data is available for the Kahn/Hazeltine system (through similar characteristics are expected) or the Harris system (which is not expected to exhibit this characteristic). It has been alleged that normal transmitter distortion products will mask the higher order emissions of the stereo transmitter in the second adjacent channel though no data is submitted to support this conclusion. Comments concerning the decreased second adjacent channel protection ratios, their significance, and the practical effects of such a decrease are solicited from all parties.[4] Data is also requested concerning the protection ratios that may be expected for two AM stations when each is transmitting in stereo for both cochannel and adjacent channel situations. The same signal strength contours used in the NAMSRC stereo-to-monophonic station tests should be used. Protection ratio test data for the Kahn/Hazeltine and Harris systems should be submitted which will permit comparison with that for the Magnavox, Motorola, and Belar systems. Both the stereo-to-monophonic and stereo-to-stereo cases should be covered. In addition to the reduction in the second adjacent channel protection ratio, both cochannel and first and third adjacent channels received less protection in the NAMSRC tests when pairs of tones were transmitted in each channel. These test results and their significance should also be addressed. Again, comparable test data should be submitted for the Kahn/Hazeltine and Harris systems.

17. The receiver compatibility tests conducted by the NAMSRC and by Hazeltine on the Kahn system are a matter of concern to the Commission. (No comparable data was submitted for the Harris system.) None of the tests were conducted at modulation levels above 85 percent though most broadcasters consistently utilize higher levels. The Commission further notes that (excluding L-only and R-only testing) the compatibility tests were conducted with transmitters being either angle modulated, or amplitude modulated, but not both at the same time. The Commission's confidence regarding the ultimate compatibility of these systems with existing monophonic receivers would be greatly increased if tests were conducted with simultaneous amplitude and angle modulation of the test carrier at levels greater than 85 percent. The Commission also desires more information concerning the possibility of increased distortion in band-limited monophonic receivers as a result of AM stereo transmissions.

18. In filings, all proponents except Harris cite stereo separation figures that should be proposed for their individual systems. Motorola suggests 20 dB separation over the audio frequency range from 50 Hz to 7500 Hz. Magnavox and Belar suggest 26 dB separation in the audio frequency range from 100 Hz to 5 kHz. Kahn suggests a minimum separation of 20 dB from 100 Hz to 5 kHz. Significantly, however, the NAMSRC report indicates that none of the systems it tested met the suggested requirements (when measured at the transmitter) during over-the-air tests conducted at WGMS and WTOP. Data submitted by Hazeltine for the Kahn system indicates that it also fails to meet the separation specified by Kahn. (Harris system test data shows that it fails to achieve the minimum separation proposed by the other proponents over the frequency range from 100 Hz to 5 kHz.) Comments concerning this anomaly are requested. These comments should also address the minimum separation that is desirable for AM stereo and that which may reasonably be obtained by AM station licensees. We note that the systems tested by the NAMSRC displayed different stereo separations at WGMS and at WTOP. Comments are requested on this performance inconsistency. The Commission is concerned that the nonuniform transmitter response to these proponents' stereo exciter equipment indicates AM station licensees may experience difficulty in meeting any but a reduced stereo separation requirement with any of the systems under consideration. An analysis of the theoretical maximum separation possible for each of the five systems would also be useful.

19. The notice of inquiry stated that one of the Commission's concerns was the compatibility of AM stereophonic transmissions with existing international radio regulations and other agreements to which the United States is a party. For example, we note that the five AM stereo systems under consideration use emissions which are specifically not covered in the United States-Mexican agreement on AM broadcasting. Nor are they contained in the North American Regional Brodcasting Agreement. This concern is raised again to point out that even if rules are adopted to permit AM stereo broadcasting, satisfactory agreements would have to be reached before stereo operation could begin.

20. In citing international concerns that could affect AM stereo broadcasting in the United States, the notice also contained a discussion of the change in the channel spacing for medium frequency stations located in regions 1 and 3. The separation between adjacent channels for AM stations operating in these regions will be 9 kHz effective November 1978. While there are no plans for such a changeover in region 2, the notice requested information on the effect such a switch would have on AM stereo transmissions whose standards were adopted under a wider spacing. The somewhat common reply was that special consideration would not be required for stereo broadcasting as opposed to monophonic broadcasting. The operation of the encoding and decoding devices would remain independent of the carrier frequency. A number of parties pointed out that AM stereo receivers produced to operate with assignments separated by 10 kHz would, however, suffer degraded performance under the narrower spacing. This would occur primarily because of increased adjacent channel interference. "Whistle" filters based upon 10 kHz channel separation would not function effectively. Worse, digitally tuned receivers with designs based upon the 10 kHz channel spacing would simply not be usable.

21. At this time, the Commission is not aware of a proposal to reduce the channel spacing in region 2. Nevertheless there is the possibility that such a proposal might be made at the 1979 World Administrative Radio Conference. Therefore system proponents and other commenting parties should seriously analyze the impact its adoption would have on the systems under consideration. In addition, the Commission notes that should a serious

[3] The preemphasis time constant has been modified from 100 μsec to 400 μsec. The low-frequency deviation has been changed from 1250 Hz to 312.5 Hz.

[4] The second and third adjacent channel strength contours specified in § 73.37(a) were not created to afford protection to the service areas of the two AM stations involved. Nonetheless, by their existence they do afford a level of protection that could change should AM stereo transmissions be permitted.

V 4

proposal to narrow the spacing be advanced in the immediate future, it could affect the timing of a decision in this proceeding. We do not believe it is in the public interest to finalize AM

ing the reception of stereo skywave signals in both the monophonic and stereophonic reception modes are solicited from all proponents.

24. Information was also requested

cy tones under provision of § 73.67(c). These tones are permitted to allow transmitter meter readings to be relayed to the remote control point. The effect of the stereo indicating tones of

of such parties must be made in written comments, reply comments, or other appropriate pleadings.

V 43/203 OCT 19 78

proposal to narrow the spacing be advanced in the immediate future, it could affect the timing of a decision in this proceeding. We do not believe it is in the public interest to finalize AM stereo standards based upon 10 kHz channel spacing if a change to 9 kHz spacing is contemplated. Our reasoning is that a delay would spare licensees additional equipment modifications and consumers would avoid investing in AM stereo receivers which could be rendered obsolete. Further comments and analysis are requested on this topic.

22. At some future time, the Commission may find that the public interest would be served by reducing the allowable bandwidth for standard broadcast transmissions from the present ±15 kHz to something less. This may be necessary as an adjunct to reduced channel spacing, or simply as a means of reducing adjacent channel interference with the present channel spacing. The commission considers it extremely important that the option to reduce bandwidth not be foreclosed by the adoption of AM stereo standards. Therefore, analysis and test data are necessary to assure the Commission that such a reduction will not be precluded by the presence of the higher order sidebands inherent in angle modulation. Comments should also address the quality of stereo reproduction possible if bandwidths were limited to ±5 kHz, ±7.5 kHz, or ±10 kHz. We note that the NAMSRC tests indicated out-of-band emissions in excess of those permitted by the Commission's rules occur under certain stereophonic conditions. It appears that the probability of this happening may be eliminated by imposing a requirement that the maximum frequency response of the L−R channel be limited. Comments on the desirability of requiring this as opposed to simply relying on the present requirements of § 73.40 are requested. We also note that the Kahn/Hazeltine system used a 5 kHz low pass filter in its L−R channel and request information on its necessity and purpose.

23. The notice requested information on the effect stereo operation would have on skywave reception by listeners who depend upon skywave service, and on the reception possible in the fading zone between groundwave and skywave propagation areas. Little information was received in response to this question. The NAMSRC did conduct some skywave propagation listening observations using the WBT transmitter in Charlotte, N.C., and a receiving site in Bethesda, Md. For this one observation there appeared to be no degradation to monophonic reception of the skywave signal due to the presence of the stereo information. Additional data and information concerning the reception of stereo skywave signals in both the monophonic and stereophonic reception modes are solicited from all proponents.

24. Information was also requested in the notice on the effect directional antennas would have on an AM stereo signal. This concern was raised due to the number of AM stations operating with directional arrays. It was thought that the AM station antenna system would limit the audio response of the station's transmission. Tests conducted by the NAMSRC, however, seemed to indicate that high "Q" antenna systems will have little effect on the tranmitted signal. This area is one in which the Commission still has lingering doubts and additional comments and data are requested. Of particular concern is the effect the stereo signal will have, if any, on protection afforded by the nulls of the antenna pattern.

25. The notice requested estimates of the expected price differential between AM stereo and AM monophonic receivers. Most of the price difference is due to the need for an additional audio channel and loudspeaker. These costs vary widely depending on the level of audio quality desired. Motorola estimates that redesigning an AM monophonic receiver to an AM stereo unit would result in a price increase between 25 and 70 percent over that of the monophonic receiver. Redesigning AM mono-FM stereo receivers to AM stereo-FM stereo operation would not involve the addition of another audio channel or loudspeaker. Estimates for the price increases involved in this conversion were estimated by Motorola and Harris to range from less than 10 percent to approximately 35 percent. These estimates are based upon the necessary decoder circuitry being produced on a single integrated circuit chip. National Semiconductor Corp. estimated the cost of these IC chips produced in high volume would add approximately $2 to the manufacturing cost of a stereo receiver for the Magnavox system and approximately $4 to the manufacturing cost for the Motorola system. They did not furnish cost figures for the Harris, Belar, and Kahn/Hazeltine receiver chips. Comments from the general public are requested on the estimates given. The Commission is interested in the potential number of consumers likely to purchase AM stereo receivers assuming a cost differential for all proponents' receivers along the lines estimated above. Additionally, we are interested in any more recent cost estimates for the proponents' decoding circuitry as determined by either the proponents or integrated circuit manufacturers.

26. AM stations operating transmitters by remote control may amplitude modulate the carrier with low frequency tones under provision of § 73.67(c). These tones are permitted to allow transmitter meter readings to be relayed to the remote control point. The effect of the stereo indicating tones of the Motorola, Magnavox, and Harris systems on the ability of AM licensees to use this low frequency tone capability should be addressed.

27. The Commission encourages further over-the-air testing of the five systems, especially during normal station operating hours. We are prepared to issue temporary authorizations to permit this. It is our hope that the proponents will use the time between issuance of this notice and the closing date for comments to obtain and submit additional data from over-the-air operation of the systems.

28. Further, as was of concern during the FM stereophonic proceeding (docket No. 13506), here also the Commission requests that the proponents whose systems are included in this notice submit information concerning the identity of persons or organizations applying for, or holding patents on AM stereophonic broadcast transmission and reception systems and apparatus. And, in addition, we are requesting information with respect to the arrangements that will be employed for the licensing of patents for competitive distribution and use of such systems and apparatus.

29. Finally, the Commission wishes to call attention to the increased demand for studio-to-transmitter link (STL) microwave channels that adoption of AM stereo standards may be expected to produce. Because the present STL allocation is quite crowded in many areas of the country, it cannot satisfy present demands for service. These demands are expected to increase should AM stereo transmissions be approved. The possibility of making additional spectrum available to meet these requests is slight. Therefore, licensees of remotely controlled AM stations seeking to transmit in stereo may find it necessary to use transmission lines leased from a common carrier to relay their signals from the studio to the transmitter site. We feel they should be aware of this.

30. Accordingly, it is proposed to amend part 73 of the Commission's rules and regulations as set forth in appendix B.

31. Authority for the actions taken herein is contained in sections 4(i), and 303 (g) and (r) of the Communication's Act of 1934, as amended.

32. Pursuant to procedures set out in § 1.4, 1.415, and 1.419 of the Commission's rules and regulations, interested parties may file comments on or before December 29, 1978, and reply comments on or before January 31, 1979. All submissions by parties to this proceeding or persons acting on behalf of such parties must be made in written comments, reply comments, or other appropriate pleadings.

33. In accordance with § 1.419 of the Commission's rules and regulations, an original and five copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission. Members of the general public who wish to participate informally in the proceeding may submit one copy of their comments, specifying docket No. 21313.

34. All filings made in this proceeding will be available for examination by interested parties during regular business hours in the Commission's Public Reference Room at its headquarters, 1919 M Street NW., Washington, D.C.

APPENDIX B

It is proposed to amend part 73 of the Commission's rules and regulations as follows:

NOTE.—Italic material denotes additions to existing rules.

I. The following rule changes are necessary for all five proposed AM stereo systems.

1. It is proposed to amend § 73.3 to read as follows:

§ 73.3 AM broadcast channel.

The term "AM broadcast channel" means the band of frequencies occupied by the carrier and the *upper and lower sidebands* of a broadcast signal with the carrier frequency at the center. Channels shall be designated by their assigned carrier frequencies. The 107 carrier frequencies assigned to standard broadcast stations shall begin at 540 kHz and be in successive steps of 10 kHz.

2. It is proposed to amend § 73.14 to read as follows:

§ 73.14 Technical definitions.

• • • • •

(j) *AM* modulator stage. *"AM* modulator stage" means the last amplifier stage of the modulating wave which *amplitude* modulates a radiofrequency stage.

(k) *AM* modulated stage. *"AM* modulated stage" means the radiofrequency stage to which the modulator is coupled and in which the *carrier wave* is modulated in accordance with the system of *amplitude* modulation and the characteristics of the modulating wave.

• • • • •

(u) *Stereophonic broadcasting.*

Crosstalk. An undesired signal occurring in one channel caused by an electrical signal in another channel.

Left (or right) signal. The electrical output of a microphone or combination of microphones placed so as to convey the intensity, time, and location of sounds originating predominantly to the listener's left (or right) of the center of the performing area.

Left (or right) stereophonic channel. The left (or right) signal as electrically reproduced in reception of AM stereophonic broadcasts.

Stereophonic separation. the ratio of the electrical signal caused in the right (or left) stereophonic channel to the electrical signal caused in the left (or right) stereophonic channel by the transmission of only a right (or left) signal.

AM stereophonic broadcast. The transmission of a stereophonic program by a single AM broadcast station utilizing the main channel and a stereophonic channel.

Main channel. The band of frequencies from 50 to 7500 Hertz which amplitude modulates the carrier.

Stereophonic channel. The band of frequencies from 50 to 7500 Hertz containing the stereophonic information which modulates the radiofrequency channel.

3. It is proposed to amend *73.40 to read as follows:*

§ 73.40 Transmitter; design, construction, and safety of life requirements.

(a) • • •

(2) The equipment is capable of satisfactory operation at the authorized operating power or the proposed operating power with *amplitude* modulation of at least 85 to 95 percent with no more distortion than given in subparagraph (3) of this paragraph.

• • • • • •

(6) The carrier hum and extraneous noise level, unweighted r.s.s. (exclusive of microphone and studio noises) over

the frequency band 30 to 20,000 Hz is at least 45 dB below the level of a 400 Hz sinusoidal tone, producing 100 percent *amplitude* modulation of the car-

(5) The requirements of subparagraphs (3) and (4) of this paragraph contemplate the use of sinusoidal test signals.

II. The following rule changes are proposed for the Magnavox system:

1. It is proposed to amend § 73.14 to read as follows:

4. It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

III. The following rule changes are proposed for the Motorola system:

1. It is proposed to amend § 73.14 to read as follows:

ting characteristics of the equipment from the microphone terminals (including microphone amplifier unless microphone frequency correction is in-

V 43 / 203 OCT 1978

the frequency band 30 to 20,000 Hz is at least 45 dB below the level of a 400 Hz sinusoidal tone, producing 100 percent *amplitude* modulation of the carrier.

• • • • • •

4. It is proposed to amend § 73.47 to read as follows:

§ 73.47 Equipment performance measurements.

(a) • • •

(6) Each licensee engaging in stereophonic broadcasting must also make equipment performance measurements utilizing left only and right only input signals to yield the following information:

(i) The same information required by subparagraphs (1), (2), and (4) of this paragraph.

(ii) Data and curves showing audio frequency stereophonic separation for fundamental frequencies of 50, 100, 400, 1000, 5000, and 7500 Hz for 25, 50, and 85 percent amplitude modulation of the carrier.

• • • • • •

5. It is proposed to amend § 73.50 to read as follows:

§ 73.50 Requirements for approval of modulation monitors.

• • • • • •

(d) The specifications that a modulation monitor must meet before it will be type approved for monitoring stereophonic operation are as follows:

(1) A means for measuring the amplitude modulation percentage of the carrier produced by the main channel signal. For this purpose the instrument must comply with the provisions of paragraph (b) of this section.

(2) A means for measuring the modulation percentage of the carrier produced by the stereophonic channel signal. For this purpose the instrument must comply with the provisions of paragraph (b) of this section.

(3) A means for measuring individually the amplitudes of the left and the right stereophonic channels with a capability of reading stereophonic channel separation of at least 32 dB with an accuracy of ±3 dB.

(4) A means for accurately indicating crosstalk from the main channel into the stereophonic channel, and from the stereophonic channel into the main channel. For this purpose the monitor must have:

(i) A provision for indicating a crosstalk ratio of at least 50 dB.

(ii) A characteristic not exceeding 42 dB of internal crosstalk for any single main channel signal or for any single stereophonic channel signal that modulates the carrier 85 percent.

(5) The requirements of subparagraphs (3) and (4) of this paragraph contemplate the use of sinusoidal test signals.

(6) The stereophonic channel modulation display may be a part of the main channel modulation display. However, if switching of functions is utilized, the peak preset indicator or main channel modulation must be independent of this switching and afford a continuous display of the main channel modulation.

6. It is proposed to amend § 73.55 to read as follows:

§ 73.55 Modulation.

(a) The percentage of *amplitude* modulation shall be maintained at as high a level as is consistent with good quality of transmission and good broadcast service. In no case shall it exceed 100 percent on negative peaks of frequent recurrence, or 125 percent on positive peaks at any time. Generally, modulation should not be less than 85 percent on peaks of frequent recurrence, but where such action may be required to avoid objectionable loudness, the degree of modulation may be reduced to whatever level is necessary for this purpose, even though, under such circumstances, the level may be substantially less than that which produces peaks of frequent recurrence at a level of 85 percent.

7. It is proposed to amend § 73.56 to read as follows:

§ 73.56 Modulation monitors.

(a) Each station shall have installed either at the transmitter site, the extension meter location, or at the remote control point from which the transmitter is controlled, a properly operating modulation monitor of a type approved by the Commission. Except for stations that are operating with an automatic transmission system (ATS), the monitor shall be in continuous operation with the modulation level meter indications available to the operator on duty in charge of the transmitter. *Each station, engaged in stereophonic operation as contemplated by § 73.61, must have in operation a modulation monitor of a type approved by the Commission for monitoring stereophonic operation.*

• • • • • •

8. It is proposed to add a new § 73.61 to read as follows:

§ 73.61 Stereophonic broadcasting.

An AM broadcast station may, without further authority from the FCC, transmit stereophonic programs upon installation of type accepted stereophonic transmitting equipment and a type approved stereophonic modulation monitor.

II. The following rule changes are proposed for the Magnavox system:

1. It is proposed to amend § 73.14 to read as follows:

§ 73.14 Technical definitions.

• • • • • •

(u) Stereophonic broadcasting.

Nominal (carrier) phase. The angular time variation of the carrier without modulation, expressed as (20f±20) radians.

Phase modulation. A system of modulation where the instantaneous phase of the radio frequency carrier varies from nominal phase in proportion to the instantaneous amplitude of the modulating signal. The instantaneous amplitude of a phase-modulated radio frequency carrier is independent of the modulating signal frequency and amplitude.

Phase deviation. The change in phase of the emitted wave from a nominal phase.

Percentage modulation (phase). The radio of the actual phase deviation expressed in percentage to the phase deviation defined as 100 percent modulation. A phase deviation of ±1 radian peak is defined as 100 percent phase modulation.

Stereophonic identification signal. A sub-audio signal transmitted at a nominal frequency of 5 Hz which identifies the broadcast signal as being stereophonic in nature. Such a signal may, but need not, be sinusoidal.

2. It is proposed to amend § 73.55 to read as follows:

§ 73.55 Modulation.

(a) • • •

(b) *Each station transmitting in stereo must comply with the following requirements:*

(1) In no case shall amplitude modulation exceed 95 percent on negative peaks of frequent recurrence.

(2) The sub-audio signal will be such as to generate a maximum peak frequency deviation of 18 Hz and a minimum peak frequency deviation of 15 Hz. The modulating signal may be sinusoidal (or a rectangular wave) with a period of 200 milliseconds ±20 milliseconds.

(3) AM and PM modulation percentage must be equal.

• • • • • •

3. It is proposed to amend § 73.59 to read as follows:

§ 73.59 Frequency tolerance.

The operating frequency of each station shall be maintained within 20 Hz of the assigned frequency *including the deviations created by the sub-audio frequency modulated signal for those stations transmitting in stereo.*

4. It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

(a) The modulating signal for the main channel shall consist of the sum of the left and right signals.

(b) The modulating signal for the stereophonic channel shall be equal to the difference of the left and right signals (L−R).

(c) The transmitter must comply with the requirements of Section 73.40(a)(2), including 95 percent phase modulation.

(d) The transmitter must comply with the requirements of Section 73.40(a)(3), both for phase and amplitude modulation modes of broadcast.

(e) The transmitter must comply with the requirements of Section 73.40(a)(4), both for phase and amplitude modulation modes of broadcast.

(f) The stereophonic channel modulated hum and extraneous noise, unweighted r.s.s. over the frequency band 30 to 20,000 Hz shall be at least 45 dB below 1 radian phase deviation. The residual frequency modulation noise, unweighted r.s.s. over the band 1 to 30 Hz shall be less than 2 Hz.

(g) At 85 percent amplitude modulation with a 400 Hz modulating signal, the phase modulation shall not exceed 2 percent. At 85 percent phase modulation with a 400 Hz modulating signal, the amplitude modulation shall not exceed 2 percent.

(h) The transmitter shall be capable of generating a frequency modulated signal of ±20 Hz deviation. This system shall accept modulating signals from d.c. to 20 Hz and shall attenuate frequencies above 20 Hz at a rate approaching 12 dB per octave.

(i) At the instant when only a left signal is applied and the modulating voltage is increasing, the main channel modulation envelope shall increase and the stereophonic channel modulation shall phase advance relative to nominal phase.

(j) The AM and PM broadcast signal components shall be transmitted so that the time delay between related amplitude and phase modulation components is less than 5 microseconds.

(k) The transmitter shall contain a device to limit the percentage of negative amplitude modulation so as not to exceed 95 percent on negative peaks of frequent recurrence.

(l) The stereophonic separation between left and right channels shall be better than 26 dB at audio modulating frequencies between 100 and 5000 Hz up to 85 percent both AM and PM modulation.

• • • • • •

III. The following rule changes are proposed for the Motorola system:

1. It is proposed to amend § 73.14 to read as follows:

§ 73.14 Technical definitions.

• • • • • •

(u) Stereophonic broadcasting.

Percentage modulation (phase). Phase modulation is defined with signals applied to left and right inputs in phase opposition (no amplitude modulation).

In a positive direction:

$$M_p = 1.27\,(+\theta_{cmax}) \times 100$$

In a negative direction:

$$M_p = 1.27\,(-\theta_{cmax}) \times 100$$

where:

M_p = phase modulation level in percent

$+\theta_{cmax}$ = peak positive phase modulation level

$-\theta_{cmax}$ = peak negative phase modulation level

and where:

$$\phi_c \text{ is defined as } \tan^{-1}\left[\frac{m(L(t)-R(t))}{1+m(L(t)+R(t))}\right]$$

• • • • • •

2. It is proposed to amend § 73.40 to read as follows:

§ 73.40 Transmitter: Design, construction, and safety of life requirements.

(a) • • •

(3) • • •

(i) When stereophonic transmission is used, the distoration defined in paragraph (3) must be measured in each channel separately.

The distoration measurements for the right channel are to be made with a signal in the right channel only and measured at the right output terminal of the monitor. The distortion measurements for the left channel are to be made with a signal in the left channel only. The distoration measurement for 95 percent modulation is omitted on the left and right only modulation conditions. The signal is then applied to both left and right channels and the distortion is measured at the monitor L+R output terminal.

(ii) When measuring the output at the monitor terminals under the conditions of left and right only input signal, the output when measured on the unused channel of the monitor shall be 20 dB below the channel being measured, or should have a value as defined in subparagraph 6 of this Section, whichever is greater.

(4) The audio frequency transmitting characteristics of the equipment from the microphone terminals (including microphone amplifier unless microphone frequency correction is included, in which event proper allowance shall be made accordingly) to the antenna output does not depart more than 2 decibels (dB) from that at 1000 cycles between 100 and 5000 Hz. *When sterophonic transmission is used the indicated values apply to each channel separately.*

(5) • • •

(6) The carrier hum and extraneous noise level, unweighted r.s.s. (exclusive of microphone and studio noises) over the frequency band 30 to 20000 Hz is at least 45 dB below the level of a 400 Hz sinusoidal tone producing 100 percent amplitude modulation of the carrier. *The values of hum and noise when measured for stereophonic transmission are measured in each channel separately.*

• • • • • •

3. It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

(a) The modulating signal for the main channel shall consist of the sum of the left and right signals.

(b) The stereophonic information is transmitted by varying the phase of the carrier in accordance with the following relationship:

$$\phi_c = \tan^{-1}\left[\frac{m(L(t)-R(t))}{1+m(L(t)+R(t))}\right]$$

where:

$L(t)$ = audio signal left channel

$R(t)$ = audio signal right channel

m = modulation factor

and

$m(L(t)+R(t))=1$ for 100 percent amplitude modulation

$m(L(t)-R(t))=$ for 100 percent phase modulation

(c) θ_{max} occurs on negative peaks of left or right signals only and should have a maximum value of 1.46 radians (83.66°) when $L(t)=0.9$, $R(t)=0$ or $R(t)=0.9$, $L(t)=0$.

(d) The composite signal contains a pilot tone for indicating the presence of a stereophonic transmission. The 25

Hz tone modulates the carrier phase ±0.04 radians peak (±2.29°). The tone modulates the carrier phase according to the relation:

$$\phi_c = \tan^{-1}\left[(0.04 \pm 0.01)\sin 50\pi t\right]$$

(b) For stations transmitting in stereo:

(1) The AM and FM modulation percentage must be equal.

including 95 percent frequency modulation.

(k) The transmitter must comply amplitude as 26.8 percent envelope modulation.

2. It is proposed to amend § 73.40 to

mission are measured in each channel separately.

V 43 / 203 OCT 19 78

Hz tone modulates the carrier phase ±0.04 radians peak (±2.29°). The tone modulates the carrier phase according to the relation:

$$\theta_{pilot} = \tan^{-1}\left[\frac{(0.04 \pm 0.01)\sin 50\pi t}{1 + L(t) + R(t)}\right]$$

where θ is the angular deviation from the pilot unmodulated carrier phase, produced by the tone.

(1) The tone shall produce 0.04±0.01 radian of phase deviation when the carrier unmodulated.

(2) The frequency of the tone shall be 25 Hz.

(3) The tone frequency shall have a tolerance of 1% (±½%).

(e) The radiated signal is given as:

$$E_c = A_c(1+m(L(t)+R(t)))\cos\left[w_c t + \tan^{-1}\left[\frac{m(L(t)-R(t))}{1+m(L(t)+R(t))}\right]\right]$$

• • • • •

IV. The following rule changes are proposed for the Kahn/Hazeltine system:

It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

(a) The modulating signal for the main channel shall consist of the sum of the left and right signals.

(b) An AM stereophonic broadcast signal shall consist of a carrier frequency component and upper and lower sidebands. The lower sideband channel transmits left hand stereo information and the upper sideband shall transmit the right hand stereo information.

(c) The stereophonic wave shall equal or better the following standards:

(1) When L=R, a conventional monophonic AM wave shall be produced.

(2) The AM stereo wave shall be fully compatible in terms of distortion and frequency response with conventional, monophonic AM receivers.

(3) The AM stereo wave's monophonic characteristic specification shall be identical with the AM broadcast standards contained in Section 73.40.

(4) When either the L or R signals are absent and the remaining signal is fully modulated:

(i) the phase modulation component should have a peak phase deviation of 31° ± 3°with approximately 4° representing the second harmonic of the audio signal, and the envelope modulation should have a peak modulation of 50 percent ± 1 percent, and

(ii) The ratio of energy between the two sidebands shall equal or exceed 100 to 1 in power (20 dB) for modulation frequencies from 100 to 5000 Hz and shall exceed 400 to 1 in power (26 dB) for 250 to 3000 Hz and 1000 to 1 in power (30 dB) at 1000 Hz.

• • • • •

V. The following rule changes are proposed for the Belar system:

1. It is proposed to amend § 73.14 to read as follows:

§ 73.14 Technical definitions.

• • • • •

(u) Stereophonic broadcasting.

Center frequency. The term "center frequency" means:

(1) The average frequency of the emitted wave when modulated by sinusoidal signal.

(2) The frequency of the emitted wave without modulation.

Frequency modulation. A system of modulation where the instantaneous radio frequency varies in proportion to the instantaneous amplitude of the modulating signal (amplitude of modulating signal to be measured after preemphasis) and the instantaneous radio frequency is independent of the frequency of the modulating signal.

Frequency swing. The instantaneous departure of the frequency of the emitted wave from the center frequency resulting from modulation.

Percentage modulation. The ratio of the actual frequency swing to the frequency swing defined as 100 percent modulation, expressed in percentage. For AM stereophonic broadcast stations, a frequency swing of ◊312.5 Hz is defined as 100 percent modulation.

2. It is proposed to amend § 73.55 to read as follows:

§ 73.55 Modulation.

(a) • • •

(b) For stations transmitting in stereo:

(1) The AM and FM modulation percentage must be equal.

(2) The percentage of amplitude modulation shall not exceed 95 percent on negative peaks of frequent recurrence.

3. It is proposed to amend § 73.59 to read as follows:

§ 73.59 Frequency tolerance.

The operating *center* frequency of each station shall be maintained within 20 Hz of the assigned frequency.

4. It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

(a) The modulating signal for the main channel shall consist of the sum of the left and right signals.

(b) The modulating signal for the stereophonic channel shall be equal to the difference of the left and right signals (L−R).

(c) The stereophonic channel shall be pre-emphasized according to a 400-microsecond time constant.

(d) Amplitude modulation of the carrier shall be used for the main channel.

(e) Frequency modulation of the carrier shall be used for the stereophonic channel.

(f) At the instant when only a positive left signal is applied, the main channel modulation envelope shall increase (positive modulation) and the stereophonic channel modulation shall cause the carrier frequency to increase.

(g) The AM and FM broadcast signal components shall be transmitted so that the time delay between related amplitude and frequency modulated components is less than 2.5 microseconds.

(h) The transmitter shall contain a device to limit the percentage of negative amplitude modulation so as not to exceed 95 percent on negative peaks of frequent recurrence.

(i) The stereophonic separation between left and right stereophonic channels shall be at least 26 dB at audio modulating frequencies between 100 and 5,000 Hz up to 85 percent modulation.

(j) The transmitter must comply with the requirements of § 73.40(a)(2) including 95 percent frequency modulation.

(k) The transmitter must comply with the requirements of § 73.40(a)(3) for both the frequency and amplitude modulation modes of the transmitter.

(l) The transmitter must comply with the requirements of § 73.40(a)(4) for both the frequency and amplitude modulation modes of the transmitter.

(m) (1) The transmitter must comply with the requirements of § 73.40(a)(6).

(2) In addition, the stereophonic channel modulated hum and extraneous noise, unweighted r.s.s. over the frequency band 30 to 20,000 Hz shall be at least 45 dB below 100 percent FM modulation (312.5 Hz peak deviation or 5.21 radians phase deviation at 60 Hz).

(n) At 85 percent amplitude modulation with a 400 Hz modulating signal, the equivalent frequency modulation shall not exceed 2 percent. At 85 percent frequency modulation with a 400 Hz modulating signal, the amplitude modulation shall not exceed 2 percent.

VI. The following rule changes are proposed for the Harris system:

1. It is proposed to amend § 73.14 to read as follows:

§ 73.14 Technical definitions.

• • • • •

(u) Stereophonic broadcasting.

Phase modulation. A system of modulation where the instantaneous phase of the radio frequency carrier varies from nominal phase in proportion to the instantaneous amplitude of the modulating signal. The instantaneous amplitude of a phase-modulated radio frequency carrier is independent of the modulating signal frequency and amplitude.

Stereophonic identification signal. A subaudio signal transmitted at a nominal frequency of 25 Hz at 9 percent phase modulation. This tone identifies the broadcast signal as being stereophonic in nature.

Phase deviation. The change in phase of the transmitted wave from a nominal phase.

Nominal (carrier) phase. The angular time variation of the carrier without modulation, expressed as (2π f $\pm$ 2π) radians.

Percentage modulation (phase). The ratio of the actual phase deviation expressed in percentage to the phase deviation defined as 100 percent modulation. A phase deviation of 100 percent is defined as giving the same sideband amplitude as 26.8 percent envelope modulation.

2. It is proposed to amend § 73.40 to read as follows:

§ 73.40 Transmitter; design, construction, and safety of life requirements.

• • • • •

(a) • • •

(3) The total audio frequency distortion from microphone terminals, including microphone amplifier, to antenna output does not exceed 5 percent harmonics (voltage measurements of arithmetical sum or r.s.s.) when modulated from 0 to 84 percent, and not over 7.5 percent harmonics (voltage measurements of arithmetical sum or r.s.s.) when modulating 85 percent to 95 percent (distortion shall be measured with modulating frequencies of 50, 100, 400, 1000, 5000, and 7500 Hertz (Hz) up to the 10th harmonic or 16,000 Hz, or any intermediate frequency that readings on these frequencies indicate is desirable). *When stereophonic transmission is used, the distortion must be measured in each channel separately. The distortion measurements for the right channel are to be made with a signal in the right channel only and measured at the right output terminal of the monitor. The distortion measurements for the left channel are to be made with a signal in the left channel only. The distortion measurement for 95 percent modulation is omitted on the left and right only modulation conditions. The signal is then applied to both left and right channels and the distortion is measured at the monitor L+R output terminal.*

(4) The audio frequency transmitting characteristics of the equipment from the microphone terminals (including microphone amplifier unless microphone frequency correction is included, in which event proper allowance shall be made accordingly) to the antenna output does not depart more than 2 decibels (dB) from that at 1000 cycles between 100 and 5000 Hz. *When stereophonic transmission is used the indicated values apply to each channel separately.*

(5) • • •

(6) The carrier hum and extraneous noise level, unweighted r.s.s. (exclusive of microphone and studio noises) over the frequency band 30 to 20,000 Hz is at least 45 dB below the level of a 400 Hz sinusoidal tone producing 100 percent amplitude modulation of the carrier. *The values of hum and noise when measured for stereophonic transmission are measured in each channel separately.*

• • • • •

3. It is proposed to add a new § 73.62 to read as follows:

§ 73.62 Stereophonic transmission standards.

(a) The main channel information is transmitted by varying the amplitude of the carrier in accordance with the following relationship:

$$V_c(t) = [[1 + (L(t) + R(t))\cos\theta]^2 + [(L(t) - R(t))\sin\theta]^2]^{1/2}$$

where $\theta = 15°$.

(b) The stereophonic channel information is transmitted by varying the phase of the carrier in accordance with the following relationship:

$$\phi_c(t) = \tan^{-1}\left[\frac{(L(t)-R(t))\sin\theta}{1+(L(t)+R(t))\cos\theta}\right]$$

where $\theta = 15°$.

(c) The stereophonic separation between left and right channels shall be a minimum of 20 dB at audio modulating frequencies between 100 Hz and 5000 Hz up to 85 percent modulation.

(d) The amplitude and phase modulation signal components shall be transmitted so that the time delay between related amplitude and phase modulation components is less than 5 microseconds.

(e) The composite signal contains a pilot tone for indicating the presence of a stereophonic transmission. The 25 Hz tone phase modulates the L−R channel at 9 percent modulation.

[CT Docket No. 78-233; FCC 78-544]

NETWORK NONDUPLICATION RULES

Proposed Rulemaking

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rulemaking in CT docket No. 78-233.

SUMMARY: The Federal Communications Commission proposes to amend its regulations to eliminate network nonduplication protection for programs of less than 30 minutes duration. The protection is afforded to

V 43 1203 OCT 19 78

local television broadcast stations carried on a cable television system and showing network programs which are being broadcast simultaneously by a more "distant" television station. The amendment would relieve an undue burden imposed on cable operators who must engage in program switching to "block out" the distant signal for the duration of the duplicate network programing.

DATES: Comments must be received on or before December 18, 1978, and reply comments on or before January 17, 1979.

ADDRESS: Office of the Secretary, Federal Communications Commission, 1919 M Street NW., Washington, D.C. 20554.

FOR FURTHER INFORMATION CONTACT:

Jim Ewalt, Cable Television Bureau, 202-632-6468.

SUPPLEMENTARY INFORMATION:

Adopted: July 27, 1978.

Released: October 11, 1978.

By the Commission: Commissioners Lee, Washburn, and White concurring in the result.

In the matter of amendment of part 76 of the Commission's rules and regulations concerning the network nonduplication rules, CT docket No. 78-233.

1. The Commission's rules [1] provide that "local television broadcast stations carried on a cable television system, are entitled to receive nonduplication protection against network programs broadcast simultaneously by a more "distant" television station. Nonduplication protection is afforded to broadcast stations in order to prevent fragmentation of their audiences by distant stations imported by the cable system and not otherwise available to the viewers within the market. Operators of cable television systems therefore, upon proper notification from a local broadcaster, are obligated to provide the requested protection by "blacking-out" the distant signal for the duration of the duplicate network programing. The Commission believes this obligation fails to serve its intended purpose and becomes unduly burdensome when applied so as to require cable operators to engage in program switching more than every half-hour and therefore should be eliminated in its application to programs of short duration. For this reason notice of proposed rulemaking is hereby given in this matter.[2]

2. We believe elimination of network nonduplication protection for programs of short duration would not impact adversely a station's local audience share and would eliminate an undue burden currently imposed on cable operators. Network programing falling within the exemption appears to be minimal, and that which does is most often of considerably shorter duration than 30 minutes.[3] Additionally, much of this programing would not be affected because it is surrounded by enough other network programing so that the total programing sequence exceeds 30 minutes. Loss of audience during these infrequent, short periods would be minimal. From the cable operator's standpoint, we note that affording protection for these shorter intervals imposes an additional burden. The operator must purchase and install switching equipment capable of being programed for less than the standard 30-minute intervals, or provide for manual switching by system personnel. His alternative, to afford protection throughout the entire 30-minute time period, would deprive subscribers of the other, nonduplicated programing broadcast during the 30-minute period.

3. We wish, in proposing this action, to make it clear that it is not our intention to exempt cable operators from compliance when a particular half-hour is occupied by more than one network program such as a 25-minute program and a 5-minute "news-break" or when the program is 28 minutes long with 2 minutes of associated advertising. Comment is requested on the following two possible formulations of the rules:

A. § 76.95 *Exceptions.*

(e) Nothwithstanding the requirements of §§ 76.92 and 76.94, a community unit need not delete reception of any program which, from the beginning to the end of the network-fed material, is of less than (alternatively, 10, 15, or 20) minutes duration.

B. § 76.95 *Exceptions.*

(e) Nothwithstanding the requirements of §§ 76.92 and 76.94, a community unit need not delete reception of any programing sequence which, including programing, associated network and local commercials, and other nonprogram material, lasts less than 30 minutes.

In addition to comments on the specific rules involved, it would also be useful to have information relating to the frequency with which nonduplication problems of this type occur including an identification of particular cable operators who have encountered the problem, the cost and difficulty of complying with nonduplication protection requests of this type, and the impact failure to provide such protection would have on local broadcasters. If it appears that this is an isolated problem, parties may wish to comment on whether ad hoc relief granted in particular circumstances would be a desirable alternative to a change in the rules. Finally, comments are requested on the rationale for this change in the rules, which is that the cost of providing nonduplication protection for these short programs is unduly expensive and complicated when compared to the benefits the rule provides.

Authority for the rulemaking proposed herein is contained in sections 1, 2, 3, 4 (i) and (j), 301, 303, 307, 308, 309, and 403 of the Communications Act of 1934, as amended. All interested parties are invited to file written comments on or before December 18, 1978, and reply comments on or before January 17, 1979. In reaching a decision on this matter, we may take into account any other relevant information before us, in addition to the comments invited by this notice.

In accordance with the provisions of § 1.419 of the Commission's rules and regulations, an original and five copies of all comments, reply comments, pleadings, briefs, or other documents shall be furnished the Commission. Participants filing the required copies who also wish each Commissioner to have a personal copy of the comments may file an additional six copies. Members of the general public who wish to express their interest by participating informally in the rulemaking proceeding may do so by submitting one copy of the comments, without regard to form, provided only that the docket number is specified in the heading. Responses will be available for public inspection during regular business hours in the Commission's Docket Reference Room at its Headquarters, 1919 M Street NW., Washington, D.C.

FEDERAL COMMUNICATIONS COMMISSION,
WILLIAM J. TRICARICO,
Secretary.

[FR Doc. 78-29482 Filed 10-18-78; 8:45 am]

[1] Secs. 76.92 and 76.94.

[2] In *TelePrompTer of Florida, Inc.*, FCC 78-250, FCC 2d (1978), we denied a petition for special relief, and ordered the cable operator to afford protection for a network program of only 5 minutes duration. Of course, that was not the proper forum for us to amend our rules and therefore, we have instituted sua sponte, this proceeding.

[3] The networks currently schedule 9 regular programs of short duration (ABC, 4; CBS, 4; NBC, 1). The subject matter of all of the programs is news, with the exception of ABC Minute Magazine and School House Rock. Of course, for many of these programs there is a longer but nevertheless shorter than 30-minute program which occupies the rest of the half-hour involved, such as Love of Life which precedes the CBS Midday News.

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[49 CFR Part 570]

[Docket No. 73-9; Notice 13]

VEHICLE IN USE INSPECTION STANDARDS

Notice of Docket Entry

AGENCY: National Highway Traffic Safety Administration.

ACTION: Rulemaking status report.

SUMMARY: This notice advises the public of the entry in the docket of a report concerning the use of spacers in the suspension systems of motor vehicles.

ADDRESS: Copies of the report are available from: Docket Section, National Highway Traffic Safety Administration, Room 5108, 400 Seventh Street SW., Washington, D.C. 20590.

FOR FURTHER INFORMATION CONTACT:

William Ostapenko, Office of State Vehicle Programs, Traffic Safety Programs, National Highway Traffic Safety Administration, Washington, D.C. 20590, 202-426-1597, or Frederic Schwartz, Jr., Office of Chief Counsel, National Highway Traffic Safety Administration, Washington, D.C. 20590, 202-426-1834.

SUPPLEMENTARY INFORMATION: On September 23, 1976, the National Highway Traffic Safety Administration (NHTSA) issued a Notice of Proposed Rulemaking which proposed permitting the use of two resilient spacers per spring in the suspension system of vehicles with a GVWR of 10,000 pounds or less (Docket No. 73-9; Notice 11, 41 FR 43191, September 30, 1976. The proposal was in response to a petition from JAMCO International, Inc.

In response to this proposal, a number of comments were received. None, however, addressed themselves to whether the use of spacers presented a potential degradation of safety. For this reason, the NHTSA contracted for research to be carried out on the effects of spring sag on vehicle handling and braking. The final report of the contractor has been placed in the docket. So that public comment on the report may be received, the NHTSA will not take final rulemaking action until after November 1, 1978.

The principal author of this notice is Frederic Schwartz, Jr., of the Office of Chief Counsel.

Issued on October 13, 1978.

CHARLES F. LIVINGSTON,
Acting Associate Administrator, Traffic Safety Programs.

DEPARTMENT OF AGRICULTURE

Federal Grain Inspection Service

GRAIN STANDARDS

Official Designation of the Lewiston Grain Inspection Service, Lewiston, Idaho, and Proposal of Geographic Area

AGENCY: Federal Grain Inspection Service.

ACTION: Notice and request for comments.

SUMMARY: This notice announces the designation of the Lewiston Grain Inspection Service, Lewiston, Idaho, as an official agency to perform grain inspection services under the authority of the United States Grain Standards Act, as amended (7 U.S.C. 71 et seq.). This notice also proposes a geographic area within which that agency will operate, and announces a name change for that agency as a result of their incorporation.

DATE: Comments by November 20, 1978.

FOR FURTHER INFORMATION CONTACT:

Edith A. Christensen, Federal Grain Inspection Service, Compliance Division, Delegation and Designation Branch, 201 14th Street SW., Room 2405, Auditors Building, Washington, D.C. 20250, 202-447-8525.

SUPPLEMENTARY INFORMATION: The United States Grain Standards Act, as amended (7 U.S.C. 71 et seq., hereinafter the "Act"), has been amended to extensively modify the official grain inspection system. Pursuant to sections 7 and 7A of the Act, the Administrator of the Federal Grain Inspection Service (FGIS), has the authority to designate any State or local governmental agency, or any person, as an official agency for the conduct of all or specified functions involved in official inspection (other than appeal inspection), weighing, and supervision of weighing of grain at locations where the Administrator determines there is a need for such services (7 U.S.C. 79 and 79a). Such designation shall terminate triennially (7 U.S.C. 79(g)(1) and 79a(c)).

The Lewiston Grain Inspection Service, an existing official agency, made application to be officially designated under the Act, as amended, to perform official inspection functions, not including official weighing.

This is to announce that the FGIS conducted the required investigation of the Lewiston Grain Inspection Service which included an onsite review of the inspection point and a determination of the nature of any proscribed conflicts of interest that might have existed. The investigation showed that the inspection functions of that agency were in compliance with the Act and that no conflict of interest situations existed.

As a result, the Lewiston Grain Inspection Service was deemed eligible for designation to perform official inspection functions (other than appeal inspection), not including official weighing. A documnt designating the Lewiston Grain Inspection Service as an official agency was signed on July 24, 1978. Said designation also included an interim assignment of geographic area within which the official agency shall officially inspect grain. The geographic area assigned on an interim basis pending final determination in this matter is: The State of Idaho north of the counties of Adams, Valley, and Lemhi.

Interested persons may obtain a map of the proposed geographic area from the Compliance Division, Delegation and Designation Branch.

NOTE: Section 7(f)(2) of the Act (7 U.S.C. 79(f)) generally provides that not more than one official agency shall be operative at one time for any geographic area as determined by the Administrator.

The specified service point of this agency is Lewiston, Idaho, located within the proposed geographic area. The designation document provides for the inclusion of additional service points which may be established in the future, within the agency's geographic area.

Publication of this notice does not preclude future amendment of this designation consistent with the provisions and objectives of the Act.

Notice is also given that the Lewiston Grain Inspection Service has changed its name, effective September 1, to the Lewiston Grain Inspection Service, Incorporated. This name change was made because the owners of that agency formed a corporation. This change in name does not involve a change in management or ownership.

Interested persons are hereby given opportunity to submit written views or comments with respect to the geographic area proposed for assignment to this agency. All views and comments should be submitted in writing to the Office of the Director, Compliance Division, Federal Grain Inspection Service, 201 14th Street SW., Room 2405, Auditors Building, Washington, D.C. 20250. All materials should be mailed to the Director not later than November 20, 1978. All materials submitted pursuant to this notice will be made available for public inspection at the Office of the Director during regular business hours (7 CFR 1.27(b)). Consideration will be given to the views and comments and so filed with the Director and to all other information available to the U.S. Department of Agriculture before final determination of the assignment of geographic area is made with respect to this matter.

(Sec. 8, Pub. L. 94-582, 90 Stat. 2870 (7 U.S.C. 79); sec. 9, Pub. L. 94-582, 90 Stat. 2875 (7 U.S.C. 79a); sec. 27, Pub. L. 94-582, 90 Stat. 2889 (7 U.S.C. 74 note).)

Done in Washington, D.C., on October 13, 1978.

DAVID C. MANGUM,
Acting Administrator.

Forest Service

ROADLESS AREA REVIEW AND EVALUATION (RARE II)

Amendment to the Inventory List

Notice is hereby given of amendment to the inventory of roadless and undeveloped areas within the National Forests and Grasslands. The inventory as published in the FEDERAL REGISTER Friday, November 18, 1977, pages 59690-59715, was amended Tuesday, February 14, 1978, pages 6291-6292, Thursday, June 8, 1978, pages 24876-24881, and Tuesday, October 3, 1978, pages 45754-45755.

The inventory is subject to adjustments from time to time as corrected data become available, as areas are modified or areas are added or deleted

from the list. This amendment contains two changes to delete private land from an inventoried area, the size of one area is increased to include additional acreage found to meet inventory criteria, and six changes reflect a recalculation of acreage.

The amendments are listed by State and National Forest in the same order as the original list. Acreages shown are gross acres.

States: Alabama—
National Forests in Alabama: Change 8212, Big Bay, to 2,886 acres (reflects reduction of 311 acres to exclude private land).
State: Montana—
Flathead National Forest: Change 1485, Bear-Marshl-Scapegt-Swan, to 245,179 acres.
Helena National Forest: Change 1616, Camas Creek, to 40,800 acres; change 1617, Mount Baldy, to 16,800 acres; change 1618, Grassy Mountain, to 5,600 acres (reflects recalculation of acreage).
Lewis and Clark National Forest: Change 1485, Bear-Marshl-Scapegt-Swan, to 329,600 acres (corrects acreage for contiguous portion of the administration endorsed Great Bear Wilderness).
State: North Carolina—
National Forests in North Carolina: Change 8203, Birkhead Mountains, to 5,759 acres (reflects reduction of 1,051 acres to exclude private land).
State: New Mexico—
Cibola National Forest: Change 3013, Apache Kid, to 131,810 acres (adds 14,180 acres which have been found to meet inventory criteria).
State: Utah—
Manti LaSal National Forest: Change 4436, Park-Woodenshoe Canyon, to 48,400 acres (reflects recalculation of acreage).

Dated: October 12, 1978.

THOMAS C. NELSON,
Acting Chief.

ROGUE NATIONAL WILD AND SCENIC RIVER

In accordance with Pub. L. 90-542, enclosed are the boundary descriptions for the portion of the Rogue Wild and Scenic River administered by the Forest Service.

The Rogue Wild and Scenic River is jointly administered by the Bureau of Land Management, U.S. Department of the Interior and the Forest Service, U.S. Department of Agriculture. The boundary description of the portion of the Rogue administered by the Bureau of Land Management appeared in the July 7, 1972, FEDERAL REGISTER.

THOMAS C. NELSON,
Acting Chief.

OCTOBER 12, 1978.

Enclosure.

DESCRIPTION OF ROGUE RIVER NATIONAL WILD AND SCENIC RIVER

The Rogue River National Wild and Scenic River shall include all the parcels of land described below: (Willamette Meridian).

[6320-01-M]

CIVIL AERONAUTICS BOARD

[Docket 33617; Order 78-10-60]

AMERICAN AIRLINES, INC.

Order of Suspension and Investigation

Adopted by the Civil Aeronautics Board at its office in Washington, D.C. on the 5th day of October, 1978.

On September 1, 1978, American Airlines, Inc. (American), filed fare increases for effect October 16, 1978, in most of its United States-Caribbean/Bermuda markets. First-class and economy-class fares would be increased 5 percent and round-trip Super Saver fares between interior U.S. points and Bermuda would be increased $6. Individual and group inclusive-tour fares would not increase nor would excursion fares between Aruba/Curacao and Baltimore, New York, Philadelphia and Washington.

In support of the filing, American says that even with the proposed increases its operations would produce a rate of return far below permitted levels.[1] It argues that its forecast of 1979 costs is reasonable; the proposed fares are related to experienced and contracted cost increases only; and since the forecast is premised on continued high load factors,[2] the increases are fully justified.

The Board concludes that the proposed increases in first-class fares between the United States and Barbados, Fort de France, and Pointe a Pitre may be unlawful and should be investigated.[3] We find that the proposed increases in these first-class fares would result in increased excess-baggage charges from points where weight-based baggage systems apply. The Board explored the merits of a weight-based baggage system in our formal investigation in Docket 24869.[4] We concluded that space, not weight, is the principal factor determining the cost of baggage services; weight may not be the sole determinant of the amount of baggage a passenger may carry without additional charge; and excess-baggage charges assessed at the rate of one percent of the one-way first-class fare per kilogram are unjust and unreasonable, in violation of section 404(a) of the Federal Aviation Act of 1958.[5] We have reaffirmed these findings in subsequent orders.[6] Because use of the weight system subjects passengers to unjustified baggage allowance restrictions and exorbitant excess-baggage charges tied to first-class fares, we will not permit increases in these fares.[7]

Accordingly, pursuant to the Federal Aviation Act of 1958, as amended, and particularly sections 102, 204(a), 403, 801 and 1002(j), thereof,

1. We institute and investigation to determine whether the fares and provisions set forth in Appendix A, and rules, regulations, or practices affecting such fares and provisions, are or will be unjust, unreasonable, unjustly discriminatory, unduly preferential, unduly prejudicial, or otherwise unlawful, and if found to be unlawful, to take appropriate action to prevent the use of such provisions or rules, regulations, or practices;

2. Pending hearing and decision by the Board, we suspend the tariff provisions specified in Appendix A[8] and their use is deferred from October 16, 1978, to and including October 16, 1979, unless otherwise ordered by the Board, and no changes shall be made therein during the period of suspension except by order or special permission of the Board;

3. We shall submit this order to the President[9] and it shall become effective on October 16, 1978.

4. We will file copies of this aforesaid tariffs and serve it on American Airlines, Inc.

We will publish this order in the FEDERAL REGISTER.

By the Civil Aeronautics Board.[10]

PHYLLIS T. KAYLOR,
Secretary.

[1505-01-M]

[Order 78-10-53; Dockets 30697, et al.]

CARIBBEAN AREA SERVICE INVESTIGATION, ET AL.

Order

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 12th day of October 1978.

In the matter of Caribbean Area Service Investigation (Docket 30697); Applications of Puerto Rico Airlines Corp. (Docket 29702); Conner Air Lines, Inc. (Docket 31120); National Airlines, Inc. (Docket 31136); Southern Airways, Inc. (Docket 31137); Eastern Air LInes, Inc. (Docket 31140); North Central Airlines, Inc. (Docket 31144); Evergreen International Airlines (Docket 31146); American Airlines, Inc. (Docket 31152); Trans Carib Air, Inc. (Docket 31153); Western Air Lines, Inc. (Docket 32438); Braniff Airways, Inc. (Docket 32448); Air Florida, Inc. (Docket 32450); Southeast Airlines, Inc. (Docket 32453); Ozark Air Lines, Inc. (Docket 32467); J. N. Lillard d.b.a. Trans-Continent Airlines (Docket 32779).

By Order 77-4-28, April 6, 1977, the Board instituted this proceeding and requested comments on its scope. After receiving comments from numerous carriers and civic parties, the Board issued Order 78-3-112, March 23, 1978; it defined the scope of the *Caribbean Area Service Investigation* to include the issue of the need for additional air transportatiop "between any point or points in the United States and any point or points in the Caribbean area (footnote omitted) and between or among any points in the Caribbean area * * *."[1] That order also granted various petitions for intervention and outstanding motions to consolidate applications which conformed to the scope of the proceeding as there defined. The Board set 20 days for the filing of any additional applications and motions to consolidate.

In response to the scoping order, applications and/or amendments to applications, together with motions to consolidate were filed by Puerto Rico Airlines, Docket 29702; Conner Air Lines, Docket 31120; National Airlines, Docket 31136; Southern Airways, Docket 31137; Eastern Air Lines, Docket 31140; North Central Airlines, Docket 31144; Evergreen International Airlines, Docket 31146; American Airlines, Docket 31152; Trans Carib Air (formerly Caribbean International Airlines), Docket 31153; Western Air Lines, Docket 32438; Braniff Airways, Docket 32448; Air Florida, Docket 32450, Southeast Airlines, Docket 32453; Ozark Air Lines, Docket 32467; J. N. Lillard d.b.a. Trans-Continent Airlines, Docket 32779.[2] With the exception of Trans-Continent's application, we will consolidate all these applications into Docket 30697.[3]

In addition to these route applications, Air Florida filed an "amended application", asking for Board approval of certain control and interlocking relationships.[4] Air Florida is, in effect, asking us to place a new issue in this case. We will consolidate the application. Consideration of these issues will not unduly burden or delay the proceeding, since the evidentiary presentation required will virtually duplicate that relating to the fitness issue.

Finally, petitions for leave to intervene have been filed by the St. Louis Airport Authority-City of St. Louis, the St. Louis Regional Commerce and Growth Association, the City of Atlanta, Atlanta Chamber of Commerce, the Norfolk Port and Industrial Authority, the Port Authority of New York and New Jersey, the Cayman Islands Hotel Association, Ltd., and the Cayman Islands Chamber of Commerce. We find that these petitioners have sufficient economic interest in the proceeding to justify their participation as parties and will grant their petitions.

Accordingly, the Board: 1. Amends ordering paragraph 3 of Order 73-3-112 to include the following issue:

(c) Does the grant of any application give rise to any control or interlocking relationships which are prohibited by section 408 or 409 of the act in the absence of Board approval? If so, does the public interest warrant approval or exemption of such relationships subject to any necessary terms, conditions and limitations?

2. Consolidates into Docket 30697 the applications, and/or amended applications of Puerto Rico Airlines (Docket 29702), Conner Air Lines (Docket 31120), National Airlines (Docket 31136), Southern Airways (Docket 31137), Eastern Air Lines (Docket 31140), North Central Airlines (Docket 31144), Evergreen International Airlines (Docket 31146), American Airlines (Docket 31152), Trans Carib Air (Docket 31153), Western Air Lines (Docket 32438), Braniff Airways (Docket 32448), Air Florida (Docket 32450), Southeast Airlines (Docket 32453), and Ozark Air Lines (Docket 32467), to the extent that they conform to the scope of that proceeding;[5]

3. Grants the motion of Trans-Continent Airlines for dismissal of its application in Docket 32779;

4. Grants the motions for leave to file late of Trans-Continent Airlines, Southeast Airlines, Ozark Air Lines, and Conner Air Lines;

5. Grants the petitions for leave to intervene filed by St. Louis Airport Authority-City of St. Louis, St. Louis Regional Commerce and Growth Association, City of Atlanta, Atlanta Chamber of Commerce, Norfolk Port and Industrial Authority, Port Authority of New York and New Jersey, Cayman Islands Hotel Association, Ltd., and Cayman Islands Chamber of Commerce;

6. Denies all petitions, motions, applications, and requests, except to the extent granted.

This order shall be published in the FEDERAL REGISTER.

By the Civil Aeronautics Board.[6]

PHYLLIS T. KAYLOR,
Secretary.

[FR Doc. 78-29545 Filed 10-18-78; 8:45 am]

[6320-01-M]

[Order 78-10-61; Docket 33622]

PAN AMERICAN WORLD AIRWAYS, INC., ET AL.

Transatlantic Fare Increases; Order of Suspension and Investigation

Adopted by the Civil Aeronautics Board at its office in Washington, D.C., on the 5th day of October 1978.

On August 17 and 18, 1978, British Airways (BA) and Pan American World Airways, Inc. (Pan American), proposed revised basic-season transatlantic fares for effectiveness November 1, 1978. Aerlinte Eireann Teoranta (Irish) and Transportes Aereos Portugueses (TAP) filed similar tariff revisions on September 1, and 5 days later British Calendonian Airways (BCAL) requested special tariff permission to file its new winter-season fares on short notice, for effectiveness October 31, 1978. On September 14, the Swiss Air Transport Co., Ltd. (Swissair), also filed a new transatlantic fare package for effect November 1, 1978.[1]

Pan American proposes to increase first-class fares by 2 to 7 percent, normal economy by 5 percent, 22/45-day excursion, APEX, GIT, and affinity/incentive group fares by as much as 10 percent, super-APEX by about 6 percent, and budget and standby by 5 to 13 percent, with standby taking larger increases than budget; 14/21-day excursion fares would remain at current winter-season levels, and youth fares would be canceled. The proposal would also restrict budget and standby fares to round trip travel (they are now available both one way and round trip) but permit standby fares to be converted to budget, and vice versa, provided reservations for the budget fare are still open.[2]

BA's proposal would leave first-class fares unchanged, but increase normal economy by 5 percent and discount fares by 9 to 13 percent, with budget and standby taking larger increases than APEX. The 14/21-day and 22/45-day excursion fares would be combined into a single 14/45-day excursion priced at the level of the 22/45-day fare—in effect, a 14-percent price reduction for travelers using the present 14/21-day. The new excursion fare would allow one stopover in each direction, at a charge of $30. BA also plans to reduce its super-APEX fares slightly, cancel its U.S.-U.K. youth and 14/21-day GIT, and eliminate weekend surcharges for excursion, 7/8-day GIT, and affinity/incentive group fares.

Both Irish and TAP propose a 5-percent increase in their basic-season normal economy charges. Irish also plans to raise first-class by 5 percent, excursion fares by 5 to 20 percent, and GIT by 10 percent. TAP's proposal includes a 25-percent increase in first-class fares, a 10-percent increase in excursion, and 8- to 26-percent increases in APEX.[3] Swissair proposes 5-percent increases in first-class and normal economy, and 5- to 10-percent increases in excursion, group, and youth fares.

BCAL proposes to increase first-class by 3 percent, normal economy ("executive full facilities") by 6.5 percent, and APEX, bottom dollar, and other discount fares by 2 to 26 percent; cancel its executive-class fares; estab-

---

[1] American forecasts returns on investment of 3.2 percent and 8.4 percent under existing and proposed fares, respectively, for calendar year 1979.

[2] American's forecast costs assume an average load factor of 63.9 percent. For the 12 months ended June 30, 1978, American experienced an average load factor of 64.6 percent in its mainland United States-Caribbean operations.

[3] American has demonstrated a need for additional revenue so the other fares will be permitted to take effect.

[4] *Baggage Allowance Tariff Rules in Overseas and Foreign Air Transportation* case, Order 76-3-81, Mar. 12, 1976.

[5] In Order 76-3-81, we found the carriers' baggage costs more closely approximate seven-tenths of one percent of the one-way economy fare per kilogram.

[6] See, for example, Orders 78-4-80, Apr. 14, 1978, 78-1-68, Jan. 17, 1978, 77-4-97, Apr. 20, 1977, 77-3-36, Mar. 7, 1977, and 76-5-26, May 10, 1976.

[7] See, for example, Orders 78-7-112, July 21, 1978, 78-2-106, Feb. 23, 1978, 78-8-25, July 25, 1978, and 76-10-108, Oct. 15, 1976.

[8] Appendix A was filed as a part of the original document.

[9] We submitted this order to the President on October 5, 1978.

[10] All members concurred

[1] The Caribbean area was defined to include 32 destinations, including Puerto Rico and the U.S. Virgin Islands. The Boston/New York/Philadelphia/Washington/Baltimore-Puerto Rico/Virgin Islands markets are also at issue in Docket 32293, and we generally do not institute proceedings that consider markets that are already at issue in pending cases. We did so here, however, in order to respond quickly to a pressing need for improved service in the Northeast Points-Puerto Rico/Virgin Islands markets and, at the same time, provide all interested airlines with a fair opportunity to prosecute applications for new or improved Caribbean authority. As it turns out, one carrier (Puerto Rico Airlines) was unable to meet the expedited procedural schedule established in Docket 32293 and has requested that we consolidate its application for New York-Puerto Rico authority into this case. We will grant its request.

[2] Southeast's and Ozark's amended applications and motions and Conner's motion were all filed late, accompanied by motions for leave to file late. We will grant these motions.

[3] By a letter filed August 16, 1978, Trans-Continent requested dismissal of its application in Docket 32779.

[4] Air Florida's pleading was late and was not accompanied by either a motion for leave to file late or a motion to consolidate. We emphasize to all interested persons that pleadings must be filed in accord with Board regulations, and all late filings must be supported by good cause.

[5] We delegate to the presiding administrative law judge the authority to consolidate by order any new applications which conform to the scope of this proceeding.

[6] All Members concurred except for Member Cohen who did not participate.

[1] Revisions to Air Tariffs Corp., Agent, CAB No. 71.

[2] Appendix A presents a comparison of current and proposed winter-season fares for selected U.S.-Europe markets. Appendixes A through B-3 were filed as a part of the original document.

[3] The large increases in first-class and APEX fares represent reversions to the previous IATA levels, with increases, compared to the lower local fares TAP now has in effect. TAP also proposes a new $30 weekend surcharge on its APEX fares.

V 43 / 203 OCT 1978

lish a new 14/45-day excursion, priced $20 higher than its current 22/45-day but below the 14/21-day level, with a separate $30 stopover charge; and cancel the present 14/21-day and 22/45-day fares, as well as the incentive group, youth, 7/8-day winter GIT, and regular GIT. Finally, the carrier plans to offer a special one-way "introductory offer fare" between Houston and London, at $99 eastbound and £50 westbound, to introduce its new B-747 service; this would be effective for only 1 week, from October 31 through November 6, 1978.

In support of its proposal, Pan American states that in conjunction with a dramatic upsurge in North Atlantic traffic—particularly low-fare traffic—it has experienced a deterioration in overall passenger yield, an increase in operating costs, and a decline in its rate of return on investment;[4] its need for increased revenue is so acute that all fare categories must contribute, as its marketing judgment considers feasible; the present proposal is designed to retain the low fares which have proved so popular and generative, and at the same time narrow the gap between normal and promotional fares by increasing normal, where possible, less than the promotional; more than 30 percent of its U.S.-Europe traffic is expected to travel on APEX, standby, or budget fares in the forecast year; if normal fares were held unchanged, much greater increases in promotional fares would be required;[5] such precipitous increases would end the traffic growth in this vast and very price-sensitive segment and cause a major disruption of the market; the wide use of normal economy fares (forecast at 24 percent of total U.S.-Europe traffic) is evidence that they are properly matching demand with the costs and value of the service provided; with a 50-percent load factor for normal economy traffic, its forecast normal economy yield under the proposed fares will not be sufficient to provide a 12-percent return element; the Board has not approved an increase in normal winter economy fares since November 1, 1974;[6] the proposed increases are expected to produce only a modest revenue gain, far short of the carrier's full revenue need, and the forecast rate of return under the proposed fares (3.37 percent) is "grossly inadequate" even when measured against the Board's "low" historical guideline of 12 percent; but the proposal will nevertheless provide much needed revenue improvement, and benefit passengers by preserving low-fare alternatives in the transatlantic fare structure.

British Airways also submitted justification of its proposal, and specifically defends the proposed 5-percent increase in normal economy fares. Citing the "disastrous" rise in the inflation rate since 1975, BA argues that normal economy fares have remained at present levels for more than three years, while operating costs for the industry have risen substantially; the 5-percent increase is an attempt to compensate, at least in part, for this "slowly worsening cost experience"; and the increase is further justified on quality-of-service grounds, since BA plans to introduce its three-class service on transatlantic flights on October 29, with new "club class" service which will greatly benefit normal economy fare passengers.[7]

We find that the proposed increases in normal economy fares may be unlawful and should be suspended pending investigation. We will take no action on the proposed increases in first-class and promotional fares.

In a long series of carrier agreements, normal transatlantic economy fares have been set at levels high enough not only to cover the cost of basic, point-to-point transportation, but to protect generally high-cost carriers, provide liberal stopover allowances, and incorporate a 20-percent mileage circuity. Although we have held the line on increases, normal economy fares continue to exceed the costs of providing direct, point-to-point transportation, and passengers who require on-demand service must pay a single premium fare, priced to cover extra services which many passengers neither need nor use. A more competitive industry might base normal economy fares on the cost of basic, point-to-point service, with separate, unbundled charges for stopovers and circuitous routings. The proposals now before us include no move toward a more competitive, innovative pricing strategy for normal economy fares; they would merely retain the present structure, with a 5-percent increase in price. We have no desire to deny the carriers the opportunity to recover their costs and a reasonable return, but we are reluctant to allow revenue improvement at the expense of passengers who already pay an unwarranted premium for basic, on-demand service.[8] Pan American's contention that the wide use of normal economy fares indicates that they are properly matching demand with the cost and value of the service provided is specious: passengers who require on-demand service have no alternative, since the restrictions attached to excursion and discount fares effectively bar many nondiscretionary passengers from using anything but the normal economy service.

We believe there should be a greater reliance on market forces to determine not only the quality and quantity but the price of air services; in principle, government intervention should be required only to prevent predation, unjust discrimination, or abuse of monopoly power. This policy has contributed to significant new price competition in the lower range of the North Atlantic fare structure, to the clear benefit of the more price-elastic segment of the market. Price competition in normal economy service, however, is still very limited. In this range, the structure remains essentially oligopolistic, with little or no realistic threat of new entry into the market for on-demand scheduled service and little or no incentive for incumbent carriers to compete on the basis of price.

We expressed these conclusions in detail in Order 78-9-38, August 23, 1978, dealing with a similar North Atlantic fare proposal by Trans World Airlines, Inc. (TWA). We said there that under these market conditions it would be be naive to hope that competition would operate to prevent or temper increases in normal economy fares; if approved, the increases would likely be adopted by most other carriers and the normal economy passenger would continue to be excluded from the benefits of an improving competitive regime. We noted our responsibili-

[4] Pan American reports a return on investment (ROI) of 10.11 percent in its North Atlantic operations for the year ended March 31, 1978, and forecasts ROI's of 3.37 and 2.47 percent, with and without the proposed fare increases, for the year ending March 31, 1979.

[5] Pan American forecasts $7.6 million in incremental revenue from the proposed fare increases, of which $4.5 million would be produced by the increases in normal economy fares.

[6] On November 1, 1978, however, the three-season fare structure (winter, shoulder, peak) was changed to two seasons (basic, peak), and the higher shoulder fares became the new basic-season levels.

[7] BA's "club class" service will provide normal economy-fare passengers with seating in a separate forward section of the aircraft, free drinks, free in-flight entertainment, improved meal service, and a high level of seat access on last-minute reservations; travelers using the various promotional fares will be seated in a separate "discount class" section. Pan American has proposed a similar "clipper class" for normal economy fare passengers, with similar in-flight amenities, separate seating, and separate check-in facilities when airport space and staffing permit. Both carriers' proposals were filed on August 15, for effectiveness October 29, 1978. Pan American, however, does not contend that the proposed increase in normal economy fares is justified on the basis of the improved quality of that service.

[8] This does not mean we conclude that no revenue improvement is warranted. With the full increases proposed, Pan American forecasts an ROI of 3.37 percent, compared to a return of 10.11 percent in the historical period; much of the decline is due to increased costs. The increases in normal economy fares which we are disapproving would account for approximately 60 percent of the total revenue gain projected by the carrier.

ty, in this transition period, to intervene in the fare-setting process when market forces are as yet too weak to do the job, and we reluctantly concluded that TWA's proposd increases in normal economy fares must be suspended. For the same reasons, we are now compelled to suspend the increases in normal economy fares proposed by Pan American, BA, BCAL, Irish, Swissair, and TAP. Again, we view this intervention as a temporary measure, to be abandoned as quickly as possible once the natural forces of competition develop.

We will not disapprove the increases sought in first-class and discount fares. We have historically permitted the carriers discretion in pricing first-class services, and the other increases are at the lower end of the fare structure, where the forces of price competition appear to be working. Indeed, both BA and BCAL have incorporated a welcome innovation in their winter-season fare proposals: consolidation of their 14/21-day and 22/45-day excursion fares into a single, 14/45-day fare, priced at or near the lower 22/45-day level, with a separate stopover charge. The new fares will not only provide passengers with some relief from the confining minimum/maximum-stay restrictions on the present excursion fares, but permit a sizable price reduction for travelers who would have used the 14/21-day fare and allow passengers to purchase point-to-point excursion fares without paying a hidden stopover charge.

The various adjustments the carriers have proposed in the relative levels of budget, standby, and APEX fares represent precisely the sort of active managerial pricing strategies which a competitive market fosters. In general, the proposed fare cancellations also reflect a productive exercise of managerial discretion, removing little-used fares and simplifying the overall structure.[9] We see no reason to intervene in such decisions, given the competitive forces at work in the market.

Accordingly, under the Federal Aviation Act of 1958, as amended, particularly sections 102, 204(a), 403, 801, and 1002(j) thereof,

1. We shall institute an investigation to determine whether the fares and provisions set forth in Appendix B hereof, and rules and regulations or practices affecting such fares and provisions, are or will be unjust, unreasonable, unjustly discriminatory, unduly preferential, unduly prejudicial or otherwise unlawful, and if we find them to be unlawful, we shall take appropriate action to prevent the use of such provisions or rules, regulations, or practices;

2. Pending hearing and decision by the Board, we shall suspend the tariff provisions specified in the attached Appendix B-1 and defer their use from October 31, 1978, to and including October 30, 1979, suspend the tariff provisions specified in the attached Appendix B-2 and defer their use from November 1, 1978, to and including October 31, 1979, and suspend the tariff provisions specified in Appendix B-3 and defer their use from December 5, 1978, to and including December 4, 1979, unless otherwise ordered by the Board, and shall permit no changes to be made therein during the period of suspension except by order or special permission of the Board;

3. We shall submit this order to the President [10] and it shall become effective on October 31, 1978;

4. We shall file a copy of this order in the aforesaid tariff, and serve copies upon Pan American World Airways, Inc.; Aerlinte Eireann Teoranta; British Airways Board carrying on business under the firm name and style of British Airways; British Caledonian Airways, Ltd; Swissair, Swiss Air Transport Co., Ltd.; and Transportes Aereos Portugueses, S.A.R.L.

We shall publish this order in the FEDERAL REGISTER.

By the Civil Aeronautics Board.[11]

PHYLLIS T. KAYLOR,
Secretary.

[FR Doc. 78-29550 Filed 10-18-78; 8:45 am]

[9] We are troubled, however, by BCAL's proposed cancellation of its executive-class fare, one of the very few partially unbundled transatlantic economy fares now available. The cancellation would leave BCAL's passengers no alternative to the full normal ("executive full facilities") fare for unrestricted, on-demand service. Certainly, the carriers should have maximum flexibility in experimenting with new fares in this transition; we recognize that cancellations are part of the process of change. We urge the carriers, however, to continue to develop innovative pricing strategies, with particular attention to the merits of unbundled fares, and not simply to return to the old fare structure if a particular experiment proves unsuccessful.

[10] This order was submitted to the President on October 6, 1978.

[11] All members concurred.

DEPARTMENT OF COMMERCE—NATIONAL BUREAU OF STANDARDS, BOULDER, COLO.

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897), and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No.: 78-00258. Applicant: Department of Commerce, National Bureau of Standards, 325 South Broadway, Boulder, Colo. 80303. Article: Model A7 Automatically Balanced Precision Resistance Bridge and accessories. Manufacturer: Automatic systems Lab., United Kingdom. Intended use of Article: The article is intended to be used for the investigation of thermodynamic properties of pure fluid and fluid mixtures. The bridge will automatically balance itself to provide very accurate temperature readings of a platinum resistance thermometer thermally attached to the cell of a pressure-volume-temperature apparatus. The readings will be used as input to a computerized data taking system and will also allow the computer to very accurately stabilize and control the temperature of the sample cells.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, is being manufactured in the United States. Reasons: The foreign article provides the capability of making rapid accurate (±0.04 percent pressure-volume-temperature measurements. The National Bureau of Standards advises in its memorandum dated September 7, 1978, that (1) the capability of the foreign article described above is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No. 78-00283. Applicant: Massachusetts Institute of Technology, 77 Massachusetts Avenue, Cambridge, Mass. 02139. Article: Calorimetric Experimental Furnace and Accessories. Manufacturer: International Flame Research Foundation, The Netherlands. Intended use of article: The article is intended to be used to form the basis of a comprehensive Combustion Research Facility which will be used to evaluate the combustion techniques and conditions required for the successful utilization of alternate fuels such as coal, coal derived liquids, shale oil, and synthetic fuels in large industrial fuel burning plant. The Department of Chemical Engineering Graduate and Undergraduate programs in Fuel Engineering and Principles of Combustion will involve laboratory and experimental courses which make use of the Combustion Research Facility.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, was being manufactured in the United States at the time the foreign article was ordered (November 3, 1976). Reasons; This application is a resubmission of Docket No. 78-00045 which was denied without prejudice to resubmission on April 13, 1978, for informational deficiencies. The foreign article provides a variable swirl generator with interchangeable burner heads for different fuels (fully calibrated for swirl number and pressure drop), individual water-cooled calorimetric furnace sections with variable heat sink capability, center line access parts for insertion of sampling probes into the flame with integral sample probe traversing gear, unique sampling and measurement probes for in-flame measurements, and an afterburner system for incineration of unburned carbonoceous species to prevent emission into the atmosphere. The National Bureau of Standards (NBS) advises in its memorandum dated August 28, 1978, that (1) all the capabilities of the foreign article described above are pertinent to the applicant's intended purposes and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use which was available at the time the foreign article was ordered.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States at the time the foreign article was ordered.

(Catalog of Federal Domestic Assistance Program No. 11.105, Importation of Duty-Free Educational and Scientific Materials.)

[3510-25-M]

NORTHEASTERN OHIO UNIVERSITIES COLLEGE OF MEDICINE

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No.: 78-00115. Applicant: Northeastern Ohio Universities College of Medicine, 4209 State Route 44, Rootstown, Ohio 44272. Article: NMR Spectrometer, Model WP-80 and Accessories. Manufacturer: Bruker, West Germany. Intended use of article: The article is intended to be used for studies of: (a) the molecular interactions between phospholipid bilayer membranes and proteins, (b) the effect of heat on phospholipid bilayer membranes, and (c) the interaction of bile acids, drugs, anesthetics, and carcinogens with phospholipid bilayer membranes. The interactions of model phospholipid membranes with added protein, drug, etc., will be determined by measuring the changes in molecular ordering of the fatty acid chains and the polar head groups, that occurs on incorporation of proteins into, or addition of drug, anesthetic, etc., to the membrane. The extent of molecular ordering of the fatty acid chains of polar head groups in an aqueous multibilayer dispersion of phospholipids is determined by measuring the C-^{2}H quadrupole splitting multibilayer dispersions prepared from selectively ^{2}H-labelled phospholipids. The changes in the quadrupole splittings on interactions with proteins, drugs, carcinogens, etc., will be measured for a variety of positions in the phospholipid in order to give a complete description of the order profile for the molecule.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, was being manufactured in the United States at the time the foreign article was ordered (July 29, 1976). Reasons: This application is a resubmission of Docket No. 77-00217, which was denied without prejudice to resubmission on September 14, 1977, for informational deficiencies. The foreign article provides a spectral width of 50 kilohertz. The Department of Health, Education, and Welfare advises in its memorandum dated August 13, 1978, that (1) the capability of the foreign article described above is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use at the time the foreign article was ordered.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States at the time the foreign article was ordered.

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897), and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No.: 78-02239. Applicant: Northwestern University, 2299 Sheridan Road, Evanston, Ill. 60201. Article: Tycoon Micro-Electrode Puller, Model EH-12 20V with auto timer and volt slider. Manufacturer: Takahashi Seiki Kogyo Co., Ltd., Japan. Intended use of article: The article is intended to be used to produce very long shanked, slender electrodes with extremely fine tip diameter (less than 0.1 μm). Intracellular potentials are recorded from the hair cells of the mammalian cochlea during research to gain understanding of the functional properties of the receptor cells of the ear.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, is being manufactured in the United States. Reasons: The foreign article provides the capability of producing electrodes with tip diameters of 0.1 micron. The Department of Health, Education, and Welfare advises in its memorandum dated August 24, 1978, that (1) the capability of the foreign article described above is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States.

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897), and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No.: 78-00279. Applicant: Pacific Northwest Laboratories, Department of Energy, P.O. Box 999, Richland, Wash. 99352. Article: COSPEC Model IVB including Single Gas IVB High Sensitivity Correlation Spectrometer with accessories. Manufacturer: Barringer Research, Canada. Intended use of article: The article is intended to be used for the study of sulfur dioxide and nitrogen dioxide emissions from power plants or any other source. Dispersion and conversion from gas to particular tracking flume over long distances will be investigated.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, is being manufactured in the United States. Reasons: The foreign article provides the capability to remotely measure in real time the total quantity of either sulfur dioxide or nitrogen dioxide. The article is a unique instrument with no other commercial counterpart. Further, its capabilities cannot be met by options to other instruments. The National Bureau of Standards (NBS) advises in its memorandum dated September 19, 1978, (1) the capability of the foreign article described above is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States.

Applications For Duty-Free Entry of Scientific Articles

The following are notices of the receipt of applications for duty-free entry of scientific articles pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651; 80 Stat. 897). Interested persons may present their views with repect to the question of whether an instrument or apparatus of equivalent scientific value for the purposes for which the article is intended to be used is being manufactured in the United States Such comments must be filed in triplicate with the Director, Statutory Import Programs Staff, Bureau of Trade Regulation, U.S. Department of Commerce, Washington, D.C. 20230, on or before November 8, 1978.

Regulations (15 CFR 301.9) issued under the cited act prescribe the requirements for comments.

A copy of each application is on file, and may be examined between 8:30 a.m. and 5 p.m., Monday through Friday, in Room 6886C of the Department of Commerce Building, 14th and Constitution Avenue NW., Washington, D.C. 20230.

Docket No. 78-00442. Applicant: The Regents of the University of California, Department of Pathology, UCSF Medical Center-595HSW, San Francisco, Calif. 94143. Article: ASID-4D Ultra High Resolution Scanning System for JEOL 100CX EM and accessories. Manufacturer: JEOL LTD., Japan. Intended use of article: The article is an accessory to an existing electron microscope manufactured by the same manufacturer which is being used for diagnosis of many renal, hepatic, and lymphoproliferative disease, for identification of certain poorly differentiated neoplastic cells of origin, and for identification of viral particles, and certain environmental elements in lungs and livers of the affected patients. Experiments to be conducted will include identification of ultrastructural components of cells and/or morphological correlation to metallic elements. The article will also be used as an instructional tool for graduate students in the Department of Pathology and also for house staff (residents). Application received by Commissioner of Customs: September 27, 1978.

Docket No. 78-00443. Applicant: University of California—Lawrence Livermore Laboratory, P.O. Box 5012, Livermore, Calif. 94550. Article: 2 Stage static-mixers centrifugal-seperators with feed units and control systems, MEAB Model SISAK 2. Manu-

facturer: MEAB Metallextraktion AB, Sweden Intended use of article: The article is intended to be used for studies of the radioactive decay of short-

of the reaction-zone thickness in chemical explosives measured using laser interferometry with very fast detectors to measure the initial velocity

stitution Avenue, NW., Washington, D.C. 20230.

Docket No.: 78-00301. Applicant: Tufts University, Dept. of Purchasing

ten recommendations to the Council for the first draft Fishery Management Plan for Shallow-Water Reef

trial innovation and to identify options that can be taken by the Federal Government to encourage industrial

ceeding year's levels, such amounts to be deducted from the affected category limits in the succeeding year. Pur-

V 4 3 1 2 0 3 0 OCT 19 78

facturer: MEAB Metallextraktion AB, Sweden Intended use of article: The article is intended to be used for studies of the radioactive decay of short-lived (half lives of 10 sec. and less) fission products. Experiments to be conducted will consist of irradiation of U_{235} followed by a chemical purification to give one element. The isotope of interest is then observed by beta, gamma, and nutron spectroscopy. The elements of interest are those which give poor yield on mass separator instruments. Objectives pursued in the course of these experiments are: (a) accurate measurement of half lives and absolute decay energies to help the Nuclear Regulatory Commission to establish standards for loss of core coolant in nuclear reactors. Application received by Commissioner of Customs: September 27, 1978.

Docket No. 78-00444. Applicant: Emory University Clinic, 1365 Clifton Road, Atlanta, Ga. 30322. Article: Diathermy Unit (434 MHz). Manufacturer: ERBE Electro, West Germany. Intended use of article: The article is intended to be used to investigate the feasibility of the treatment of cancer by means of heat produced by 434 MHz radio waves. Tumor response will be evaluated by a physician during and after the heat therapy. Application received by Commissioner of Customs: September 27, 1978.

Docket No. 78-00445. Applicant: University of California—Lawrence Livermore Laboratory, P.O. Box 5012, Livermore, Calif. 94550. Article: Electronic Intensifying Streak/Framing Camera System, Model 790/520/ELC and accessories. Manufacturer: John Hadland Photographic Instrumentation Ltd., United Kingdom. Intended use of article: The article is intended to be used to study shock-induced free surface motion and high-speed intensified flash X-ray diagnostics. Experiments to be conducted will include measurement of the thermodynamic properties of various materials under shock conditions, and measurements of the velocity-time history of material-air interfaces. Application received by Commissioner of Customs: September 27, 1978.

Docket No. 78-00446. Applicant: University of California—Lawrence Livermore Laboratory, P.O. Box 5012, Livermore, Calif. 94550. Article: Thomson-CSF Model TSN 660 4 gigahertz oscilloscope and accessories. Manufacturer: Thomson CSF, France. Intended use of article: The article is intended to be used for the study of very high-speed shock-wave physics. Some of the experiments to be conducted are: (1) shock wave risetime experiments were fundamental viscosity measurements of metals under very high pressure can be measured and (2) fundamental physical measurements of the reaction-zone thickness in chemical explosives measured using laser interferometry with very fast detectors to measure the initial velocity of metal plant in contact with the explosive to be studied. Application received by Commissioner of Customs: September 27, 1978.

Docket No. 78-00447. Applicant: University of Oklahoma, Purchasing Office, 660 Parrington Oval, Room 321, Norman, Okla. 73019. Article: Micromass 602 Double Collector Mass Spectrometer and accessories. Manufacturer: VG Micromass, United Kingdom. Intended use of article: The article is intended to be used for measuring the isotopic composition of biogenic carbonate cements, lipid material, and dissolved carbon gases in sediments. It allows examination and measurement of the carbon-13 to carbon-12 ratios of these various materials in order to determine their origins and fates. Sediment samples will be collected from the Gulf of Mexico and Enewetak Island as opportunities arise to be processed for analysis. Specific compounds of interest will be extracted or separated for inlet into the mass spectrometer and subsequent analysis. The objectives of these studies include an attempt to establish the origins and fates of these specific components of natural organic matter, and moreover, to assess the petroleum source rock potential of various sediments and rocks. The article will also be used for educational purposes in a Isotope Geochemistry course to expose advanced students to the tremendous research potential of stable isotope mass spectrometry. Application received by Commissioner of Customs: September 27, 1978.

TUFTS UNIVERSITY

Decision on Application for Duty-Free Entry of Scientific Article

The following is a decision on an application for duty-free entry of a scientific article pursuant to section 6(c) of the Educational, Scientific, and Cultural Materials Importation Act of 1966 (Pub. L. 89-651, 80 Stat. 897) and the regulations issued thereunder as amended (15 CFR Part 301).

A copy of the record pertaining to this decision is available for public review between 8:30 a.m. and 5 p.m. in Room 6886C of the Department of Commerce Building, at 14th and Constitution Avenue, NW., Washington, D.C. 20230.

Docket No.: 78-00301. Applicant: Tufts University, Dept. of Purchasing, Medford, Mass. 02155. Article: Gas Analysis Instrument; Experimental. Manufacturer: Rheinmetall, West Germany. Intended use of article: The article is intended to be used in the development of a continuous surface chromatographic instrument that will separate mixtures of gases of vapors for the purposes of purification or identification.

Comments: No comments have been received with respect to this application.

Decision: Application approved. No instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, is being manufactured in the United States.

Reasons: The foreign article provides the capability to perform continuous surface chromatography. The National Bureau of Standards (NBS) advises in its memorandum dated September 6, 1978, that (1) the capability of the foreign article described above is pertinent to the applicant's intended purpose and (2) it knows of no domestic instrument or apparatus of equivalent scientific value to the foreign article for the applicant's intended use.

The Department of Commerce knows of no other instrument or apparatus of equivalent scientific value to the foreign article, for such purposes as this article is intended to be used, which is being manufactured in the United States.

(Catalog of Federal Domestic Assistance Program No. 11.105, Importation of Duty-Free Educational and Scientific Materials.)

National Oceanic and Atmospheric Administration

CARIBBEAN FISHERY MANAGEMENT COUNCIL

Shallow-Water Reef Fishes

AGENCY: National Marine Fisheries Service, NOAA.

ACTION: Notice of public meeting.

SUMMARY: The Scientific and Statistical Committee and the Advisory Panel of the Caribbean Fishery Management Council, established by section 302g(2) of the Fishery Conservation and Management Act of 1976 (Pub. L. 94-265), will meet jointly to examine alternatives and provide written recommendations to the Council for the first draft Fishery Management Plan for Shallow-Water Reef Fishes.

DATES: The meeting will convene at 9 a.m. on Thursday, November 2, 1978, and adjourn at approximately 3 p.m. This meeting is opened to the public.

ADDRESS: The meeting will take place at the Council's office located at Suite 1108, Banco de Ponce Building, Hato Rey, P.R.

FOR FURTHER INFORMATION CONTACT:

Mr. Omar Munoz-Roure, Executive Director, Caribbean Fishery Management Council, Suite 1108, Banco de Ponce Building, Hato Rey, P.R. 00918, telephone 809-753-4926.

SUPPLEMENTARY INFORMATION: For information on seating arrangements, changes to the agenda, and/or written comments, contact the Executive Director.

Dated: October 16, 1978.

WINFRED H. MEIBOHM,
Associate Director, National Marine Fisheries Service.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

REPUBLIC OF KOREA

Adjusting Import Restraint Levels for Certain Cotton, Wool, and Man-Made Fiber Textile Products

OCTOBER 16, 1978.

AGENCY: Committee for the Implementation of Textile Agreements.

ACTION: Granting increases for flexibility and carryforward in Categories 333/334/335, 340, 347/348, 433/434, 438, 440, 443, 444, 445/446, 447, 633/634/635, 638/639, 640, 641, 643, 645/646, and 647 during the agreement year which began on January 1, 1978. (A detailed description of the categories in terms of T.S.U.S.A. numbers was published in the FEDERAL REGISTER on January 4, 1978 (43 FR 884), as amended on January 25, 1978 (43 FR 342), March 3, 1978 (43 FR 8828), June 22, 1978 (43 FR 26773) and September 5, 1978 (43 FR 39408)).

SUMMARY: Paragraphs 8 and 9 of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of December 23, 1977, as amended, between the Governments of the United States and the Republic of Korea provide, respectively, for percentage increases in certain specific category ceilings during an agreement year and for the borrowing of yardage from the succeeding year's levels, such amounts to be deducted from the affected category limits in the succeeding year. Pursuant to the foregoing paragraphs of the bilateral agreement, the import restraint levels established for Categories 333/334/335, 340, 347/348, 433/434, 438, 440, 443, 444, 445/446, 447, 633/634/635, 638/639, 640, 641, 643, 645/646, and 647 are being increased for the 12-month period which began on January 1, 1978 and extends through December 31, 1978.

EFFECTIVE DATE: October 16, 1978.

FOR FURTHER INFORMATION CONTACT:

Robert C. Woods, International Trade Specialist, Office of Textiles, U.S. Department of Commerce, Washington, D.C. 20230, 202-377-5423.

SUPPLEMENTARY INFORMATION: On December 30, 1977, a letter dated December 27, 1977, from the Chairman of the Committee for the Implementation of Textile Agreements to the Commissioner of Customs was published in the FEDERAL REGISTER (42 FR 65246), which established inmport restraint levels for certain specified categories of cotton, wool and man-made fiber textile products, produced or manufactured in the Republic of Korea and exported to the United States during the 12-month period which began on January 1, 1978 and extends through December 31, 1978.

In the letter published below the Commissioner of Customs is directed, in accordance with the provisions of the bilateral agreement to adjust the levels of restraint previously established for Categories 333/334/335, 340, 347/348, 433/434, 438, 440, 443, 444, 445/446, 447, 633/634/635, 638/639, 640, 641, 643, 645/646, and 647 to the designated amounts.

ROBERT E. SHEPHERD,
Chairman, Committee for the Implementation of Textile Agreements, and Deputy Assistant Secretay for Domestic Business Development.

COMMITTEE FOR THE IMPLEMENTATION OF TEXTILE AGREEMENTS

OCTOBER 16, 1978

Commissioner of Customs,
Department of the Treasury,
Washington, D.C.

DEAR MR. COMMISSIONER: On December 27, 1977, the Chairman, Committee for the Implementation of Textile Agreements, directed you to prohibit entry for consumption, or withdrawal from warehouse for consumption, during the 12-month period beginning on January 1, 1978 and extending through December 31, 1978 of cotton, wool and man-made fiber textile products in certain specified categories, produced or manufactured in the Republic of Korea, in excess of designated levels of restraint. The Chair-

V 43 / 203 OCT 19 78

man further advised you that the levels of restraint are subject to adjustment.[1]

Under the terms of the Arrangement Regarding International Trade in Textiles done at Geneva on December 20, 1973, as extended on December 15, 1977; pursuant to paragraphs 8 and 9 of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of December 23, 1977, as amended, between the Governments of the United States and the Republic of Korea; and in accordance with the provisions of Executive Order 11651 of March 3, 1972, as amended by Executive Order 11951 of January 6, 1977, you are directed, effective on October 16, 1978, to amend the 12-month levels of restraint established for the cotton, wool and man-made fiber textile products in the following categories to the indicated amounts:

Category and Amended 12-Month Level of Restraint[2]

333/334/335—87,388 dozen of which not more than 49,724 dozen shall be in Category 333/334 and not more than 50,773 dozen shall be in Category 335.
340—154,248 dozen.
347/348—229,943 dozen of which not more than 162,373 dozen shall be in Cat. 347 and not more than 125,056 dozen shall be in Cat. 348.
433/434—18,169 dozen of which not more than 13,211 dozen shall be in Cat. 433 and not more than 6,775 dozen shall be in Cat. 434.
438—48,981 dozen.
440—220,299 dozen.
443—29,949 dozen.
444—4,252 dozen.
445/446—54,877 dozen.
447—87, 721 dozen.
633/634/635—1,357,978 dozen of which not more than 173,575 dozen shall be in Cat. 633; not more than 799,593 dozen shall be in Cat. 634; and not more than 588,508 dozen shall be in Cat. 635.
638/639—5,458,354 dozen.
640 [3]—4,405,465 dozen.
640 [4]—1,630,069 dozen.
641—1,014,273 dozen.
643—61,128 dozen.
645/646—3,209,054 dozen.
647—981,072 dozen.

The actions taken with respect to the Government of the Republic of Korea and with respect to imports of cotton, wool and man-made fiber textile products from the Republic of Korea have been determined by the Committee for the Implementation of Textile Agreements to involve foreign affairs functions of the United States. Therefore, the directions to the Commissioner of Customs, being necessary to the implementation of such actions, fall within the foreign affairs exception to the rule-making provisions of 5 U.S.C. 553. This letter will be published in the FEDERAL REGISTER.

Sincerely,

ROBERT E. SHEPHERD,
Chairman, Committee for the Implementation of Textile Agreements, and Deputy Assistant Secretary for Domestic Business Development.

[FR Doc. 78-29536 Filed 10-18-78; 8:45 am]

[1] The term "adjustment" refers to those provisions of the Bilateral Cotton, Wool and Man-Made Fiber Textile Agreement of Dec. 23, 1977, as amended, between the Governments of the United States and the Republic of Korea, which provide, in part, that (1) within the aggregate and applicable group limits, specific levels of restraint may be exceeded by designated percentages; (2) these same levels may be increased for carryover and carryforward up to 11 percent of the applicable category limit; (3) consultation levels may be increased within the aggregate and applicable group limits upon agreement between the two governments; and (4) administrative arragements or adjustments may be made to resolve minor problems arising in the implementation of the agreement.

[2] The levels of restraint have not been adjusted to reflect any imports after Dec. 31, 1977.

[3] In Category 640, only T.S.U.S.A. numbers 380.0455 and 380.8435.

[4] In Category 640, all T.S.U.S.A. numbers except those listed in footnote 3.

[6355-01-M]

CONSUMER PRODUCT SAFETY COMMISSION

[Petition No. CP 78-8]

SERVICE DROP WIRES

Denial of Petition

AGENCY: Consumer Product Safety Commission.

ACTION: Denial of Petition.

SUMMARY: The Commission denies a petition requesting it to establish a consumer product safety rule for service drop wires that would require all electrical service drop wires to residential homes to be electrically insulated, require the insulation to meet specified criteria, and require utility companies to replace existing wire which has exceeded a safe age or failed a periodic safety inspection. The Commission denies the petition because it has insufficient data to conclude that a mandatory safety standard is necessary.

FOR FURTHER INFORMATION CONTACT:

Irwin L. Greif, Office of Program Management, Consumer Product Safety Commission, Washington, D.C. 20207, 301-492-6754.

SUPPLEMENTARY INFORMATION: Section 10 of the Consumer Product Safety Act (DPSA) (15 U.S.C, 2059) provides that any interested person may petition the Consumer Product Safety Commission (CPSC) to begin a proceeding to issue, amend, or revoke a consumer product safety standard or ban. Section 10 also provides that if the Commission denies such a petition, it shall publish its reasons for denial in the FEDERAL REGISTER.

On November 10, 1977, the Office of the Secretary received a petition (CP 78-8) from Mr. G. Judson Scott, requesting the Commission to issue a rule requiring that all electrical service drop wires to residential homes be electrically insulated; that the insulation have a specific rated maximum safe use life under normal conditions of use and environment; and that utility companies be required to replace existing wiring which has exceeded a safe age or has failed a periodic safety inspection. The petition alleged that hazards associated with service drop wires include electrical shock or electrocution due to persons contacting the service drop wire and residential fires caused by faulty service drop wires. All of the evidence presented by the petition concerned the electric shock hazard and consideration of the petition was limited to that alleged hazard.

SUMMARY OF INJURY DATA

In analyzing this petition, the Commission considered injury information submitted by the petitioner, its own investigation of injury data, economic and engineering data and applicable voluntary standards.

Although the Commission's data retrieval systems do not have specific product catagories for injuries involving service drop wires, the Commission searched those product codes considered likely to be involved in accidental contact with service drop wires. This investigation revealed 14 incidents, 11 of which were reported in newspaper clippings, 1 reported in the Commission's death certificate file begun in 1973, and 2 indepth investigations conducted since January 1976. The details of the 14 incidents indicate that persons made contact with service drop wires while painting their house, putting up antennas, or making house repairs. The 14 reported incidents involved 16 victims, 9 of whom were electrocuted, 4 hospitalized, 2 treated and released, and 1 injured without report of treatment.

The Commission's investigation into this matter reveals that the majority of single unit residential buildings constructed in the last 15 years (and older buildings for which service drop wires have been replaced) appear to use insulated wire known as triplex, or underground service wiring. Estimates place the safe use life of triplex wiring under normal conditions at approximately 30 years. The majority of the 30-40 million homes in existence constructed more than 15 years ago reportedly use pre-triplex insulated wire. The number of homes with uninsulated service drop wire is estimated to be relatively small and confined primarily to rural areas. A factor encouraging use of triplex wire today is that when the material and installation costs are combined, this wire is less expensive than uninsulated wire. Since the wire is installed by professionals and not do-it-yourself consumers, it appears unlikely that uninsulated wire would be used.

CONCLUSION

Based on the foregoing injury and economic data, the Commission notes that it appears that most service drop wire used today above ground is made of insulated wire known as triplex. The Commission is unable to determine whether there are any injuries of the type described in the petition associated with this (triplex) wire. The Commission, therefore, concludes that the available information is insufficient to determine that service drop wires generally used today present an unreasonable risk of injury to consumers and denies the petition. In this regard, it should be noted that any Commission action to establish a standard for service drop wires would apply only to products manufactured after the effective date of the standard, 15 U.S.C. 2058. Thus, the Commission could not as requested in the petition require utility companies to replace existing wire as part of a mandatory standard issued under the CPSA. In reaching its decision, the Commission has considered the relative priority of the risk of injury associated with service drop wires and the Commission's resources available for rulemaking for all consumer products.

Copies of the petition and the staff's briefing package to the Commission on the petition may be obtained from the Office of the Secretary, Consumer Product Safety Commission, 1111 18th Street NW., Washington, D.C. 20207.

Dated: October 13, 1978.

SADYE E. DUNN,
Secretary, Consumer Product Safety Commission.

DEPARTMENT OF DEFENSE

Department of the Navy

CHIEF OF NAVAL OPERATIONS EXECUTIVE PANEL ADVISORY COMMITTEE

Closed Meeting

Pursuant to the provisions of the Federal Advisory Committee Act (5 U.S.C. App. I), notice is hereby given that the Chief of Naval Operations (CNO) Executive Panel Advisory Committee will meet on November 8-9, 1978, at the Pentagon, Washington, D.C. Sessions of the meeting will commence at 8:30 a.m. and terminate at 5:30 p.m. on both days. All sessions will be closed to the public.

The entire agenda will be devoted to discussions of sensitive strategic problems and programmatic planning and a review of intelligence developments. The agenda will consist of classified information that is specifically authorized by Executive order to be kept secret in the interest of national defense and is, in fact, properly classified pursuant to such Executive order. Accordingly, the Secretary of the Navy has determined in writing that the public interest requires that all sessions of the meeting be closed to the public because they will be concerned with matters listed in section 552b(c)(1) of title 5, United States Code.

For further information concerning this meeting, contact Commander Robert B. Vosilus, United States Navy, Executive Secretary of the CNO Executive Panel Advisory Committee, 1401 Wilson Boulevard, Room 405, Arlington, Va. 22209, telephone 202-694-3191.

Dated: October 16, 1978.

P. B. WALKER,
Captain, JAFC, U.S. Navy Deputy Assistant Judge Advocate General (Administrative Law).

DELAWARE RIVER BASIN COMMISSION

COMPREHENSIVE PLANS

Public Hearing

Notice is hereby given by the Delaware River Basin Commission that it will hold a public hearing on Wednesday, October 25, 1978, commencing at 2:30 p.m. The hearing will be a part of the Commission's regular October business meeting which is open to the public. Both the hearing and the meeting will be held in the Laurel Ballroom of the Pocono Hershey Resort near White Haven, Pa. (intersection of Interstate Route 80 and the Northeast Extension of the Pennsylvania Turnpike.) The hearing will be held on two subjects as follows:

Current Expense Budget. A proposed current expense budget for the fiscal year beginning July 1, 1979 in the aggregate amount of $1,750,400, and a capital budget for the same period in the amount of $27,000. The following amounts would be apportioned among the signatory parties, along with the additional appropriations by the Commission, to balance the current expense budget: Delaware $124,200; New Jersey $346,600; New York $273,000; Pennsylvania $381,100; and the Federal government $467,500. Copies of summaries of the current expense and capital budget are available from the Commission on request.

II. *Project Review Applications.* Applications for approval of the following projects are pending before the Commission as amendments to the Comprehensive Plan and/or as project approvals pursuant to Section 3.8 of the Compact:

1. *Dublin Water Company (D-76-63 CP).* A well water supply project to augment public water supplies in the company's service area in Upper Dublin township, Montgomery County, Pa. The application is for approval to withdraw 600,000 gallons per day from Well No. 5 and to increase the total average withdrawal from all sources to 1.2 million gallons per day. Adjudicatory hearings on this application have been held by the Commission and a report of the Hearing Officer filed on June 2, 1978. The application and the recommendations of the Hearing Officer will be considered by the Commission.

2. *Pequest Sewer Co. (D-78-24).* Expansion of the company's existing sewage treatment plant in Allamuchy Township, Warren County, N.J. Present capacity will be increased from the present 0.3 million gallons per day to between 600,000 gallons per day and 1.2 million gallons per day. About 95 percent of BOD will be removed prior to discharge of treated effluent to the Pequest River.

3. *Perduc, Inc. (D-78-5).* An industrial waste treatment facility at the poultry processing plant recently acquired from Swift & Co. in Georgetown, Sussex County, Del. Approximately 98 percent of BOD will be removed from a wastewater flow of 860,000 gallons per day. Treated effluent will discharge to Bloomington Ditch, a tributary of the Broadkill River.

4. *Public Service Electric & Gas Co. (D-78-57).* An industrial waste treatment project to the Company's Mercer Generating Station, Hamilton Township, Mercer County, N.J. The applicant proposes to construct facilities to treat boiler blowdown, demineralizer regenerant, boiler cleaning and other waste streams. Treated effluent will discharge to the Delaware River.

5. *Public Service Electric & Gas Co. (D-78-58).* An industrial waste treatment project to the Company's Burlington Plant, Burlington Township, N.J. The applicant proposes to construct facilities to treat boiler blowdown, demineralizer regenerant, boiler cleaning and other waste streams. Treated effluent will discharge to the Delaware River.

6. *Metropolitan Edison Co. (D-78-16).* A well water supply project to augment water supply to the Company's Portland Generating Station in Upper Mount Bethel Township, Northampton County, Pa. The new facility is designed to yield 140,000 gallons per day.

Documents relating to the above-listed applications may be examined at the Commission offices. For further information contact Mr. David B. Everett at the Commission.

V 4 3 1 2 0 3 0 OCT 19 78

Persons wishing to testify on the current expense budget or any of the applications listed above are requested to notify the Secretary to the Commission prior to the hearing.

OCTOBER 11, 1978.

W. BRINTON WHITALL,
Secretary.

[3128-01-M]

DEPARTMENT OF ENERGY

CONDUCT OF EMPLOYEES

Waiver Pursuant to Section 602(c) of the Department of Energy Organization Act (Pub. L. 95-91)

Section 602(c) of the Department of Energy Organization Act (Pub. L. 95-91, the "Act") authorizes the Secretary of Energy to grant waivers from the divestiture requirements of section 602(a) of the Act to "supervisory employees" (as defined in section 601(a) of the Act) of the Department of Energy who has financial interests in "energy concerns" (as defined in section 601(b) of the Act), where exceptional hardship would result.

It has been established to my satisfaction that a time-limited waiver of the requirements of section 602(a) of the Act for the individual "supervisory employee" of the Department of Energy whose name is listed below is justified and I so find. This waiver shall expire on January 31, 1979.

Name and Energy Concern

Holsey G. Handyside—Bendix Corp., General Electric Co., Exxon Corp., Mobil Corp., Phillips Petroleum Co., Schlumberger Ltd., Standard Oil Co. of Ohio, and Texas Commerce Bankshares, Inc.

Mr. Handyside's official duties as Deputy Assistant Secretary for International Programs will require little if any involvement on his part in particular matters that could have a direct and predictable impact on any of the listed energy concerns; for the most part his responsibilities will be of a policymaking nature and will relate to the areas of nuclear energy, solar energy, and renewable resources. Nevertheless, he will be directed not to participate personally and substantially, as a Government employee, in any particular matter the outcome of which could have a direct and predictable effect on any of the listed energy concerns, unless his supervisor and the counselor agree that the financial interest in the particular matter is not so substantial as to be deemed likely to affect the integrity of the services which the Government may expect of him.

Dated: October 10, 1978.

JAMES R. SCHLESINGER,
Secretary of Energy.

INDUSTRIAL ENERGY CONSERVATION

Workshops

The Department of Energy (DOE) hereby gives notice that it will hold a number of workshops on the industrial energy conservation program established by Part D (42 U.S.C. 6341-6346) of Title III of the Energy Policy and Conservation Act (EPCA). The workshops will be held at the following locations and times:

Washington, D.C., November 6 and 7, 1978, 8:30 a.m., Sheraton National Motor Hotel, Arlington, Va.
Atlanta, Ga., December 14 and 15, 1978, 8:30 a.m., Sheraton Biltmore Hotel.
Houston, Tex., January 4 and 5, 1979, 8:30 a.m., Sheraton Houston Hotel.
Chicago, Ill., January 25 and 26, 1979, 8:30 a.m., Sheraton Plaza Hotel.
New York, N.Y., February 12 and 13, 1979, 8:30 a.m., New York Sheraton Hotel.
San Francisco, Calif., February 22 and 23, 1979, 8:30 a.m., Sheraton Palace Hotel.

The purpose of the workshops is to improve the monitoring by DOE of industry's efforts in improving energy efficiency through energy conservation and consumption reports filed with DOE. To this end it is desirable that the workshops include participants from the various industrial organizations—both corporations and trade associations—currently reporting energy conservation and consumption information to DOE under the program because of their experience with DOE's current reporting requirements.

Each workshop will begin with a review of the current reporting effort and suggested topics for discussion in working groups. To encourage full discussion of each industry's particular concerns, the participants will be divided into working groups to present views concerning current reporting problems and improvements which might be made in future reporting efforts.

The views and information presented in each of these working groups will be recorded by its moderator who will present them in the plenary session at which there will be both panel and open floor discussion. The working group format is not intended to elicit consensus opinions from working groups but rather to be a forum where group members may make their views known to DOE and the other participants.

All workshops are open to the public. Anyone interested in obtaining an agenda and further information and/or participating should contact O. Cleveland Laird, Jr., DOE, 666 11th Street NW., Room 735, Washington, D.C. 20001, 202-724-3456 at least 10 days prior to the workshop. Any interested person may file written statements with the workshop director before or at the close of any workshop, and may make oral statements during the time set aside at the conclusion of each workshop.

Minutes of the workshops will be available for public review at the Freedom of Information Public Reading Room, Room 2107, DOE, Federal Building, 12th and Pennsylvania Avenue NW., Washington, D.C., between the hours of 8 a.m. and 4:30 p.m., Monday through Friday, except Federal holidays.

Issued at Washington, D.C., October 13, 1978.

WILLIAM P. DAVIS,
Deputy Director of Administration.

[FR Doc. 78-29454 Filed 10-18-78; 8:45 am]

[3128-01-M]

PROPOSED NEW SOURCE PERFORMANCE STANDARDS

Public Meeting

A public meeting will be convened on October 24, 1978, commencing at 10 a.m. to discuss the issues related to EPA's proposed New Source Performance Standards to be promulgated under the Clean Air Act Amendments of 1977 (43 FR 42154, Sept. 19, 1978). The purpose of the meeting is to furnish the Department of Energy with the views of all interested parties to assist it in formulating its comments on the EPA rulemaking.

In order to focus the issues at the public meeting, workshops consisting of persons with related interests will convene on October 23, 1978, from 9 a.m. to 4 p.m. The public is invited to observe the proceedings. The meetings will be held in the Washington Hilton Hotel in Washington, D.C.

For additional information, all interested individuals are encouraged to contact Janet Cool, Division of Environmental Liaison, on 202-376-4449.

Issued in Washington, D.C. on October 16, 1978.

WILLIAM P. DAVIS,
Deputy Director of Administration.

DRAFT REPORT TO THE PRESIDENT BY THE INTERAGENCY REVIEW GROUP ON NUCLEAR WASTE MANAGEMENT

Availability

Notice is hereby given that the draft report to the President by the Interagency Review Group on Nuclear Waste Management will be available for public comment beginning October 19, 1978.

The Interagency Review Group (IRG) was established by President Carter on March 15, 1978, to develop recommendations for establishing an administration policy on long-term management of the Nation's nuclear waste. This includes waste from commercial nuclear power operations, and existing low-level, transuranic, and high-level defense waste.

The following organizations are members of the Interagency Review Group: Department of Energy (chair), Department of State, Department of Interior, Department of Transportation, Department of Commerce, Council on Environmental Quality, Environmental Protection Agency, National Aeronautics and Space Administration, Office of Managment and Budget, Office of Domestic Affairs and Policy, National Security Council, Arms Control and Disarmament Agency, Office of Science and Technology Policy and the Nuclear Regulatory Commission. The NRC participated in the activities of the IRG as a nonvoting member.

As part of the public participation process, the IRG held a series of small meetings in Washington with groups interested in nuclear waste management. Following these, public meetings were held in July and August in San Francisco, Denver, and Boston. Input from these meetings was used in preparing the Draft Report.

All interested agencies, organizations, or persons desiring to submit comments on the Draft Report are invited to do so. Copies are available for public inspection at the DOE public document room, located in the Library, Room 1223, Department of Energy, 20 Massachusetts Avenue NW., Washington, D.C. 20545. Copies are also available at the DOE Regional Offices in: Boston, Mass.; New York, N.Y.; Philadelphia, Pa.; Atlanta, Ga.; Chicago, Ill.; Dallas, Tex.; Kansas City, Mo.; Denver, Colo.; San Francisco, Calif.; and Seattle, Wash.

Requests for copies of the report and written comments may be sent to:

Interagency Review Group on Nuclear Waste Management, Department of Energy, 20 Massachusetts Avenue, NW., Room 8137, Washington, D.C. 20545, telephone 202-376-4036.

Comments will be received for a period of 30 days. Following that, the report will be revised as appropriate and submitted to the President.

Dated at Washinton, D.C., this 17th day of October 1978.

For the Department of Energy.

WILLIAM P. DAVIS,
Deputy Director of Administration.

[3128-01-M]

Economic Regulatory Administration

COLORADO UTE ELECTRIC ASSOCIATION, INC., ET AL.

Prohibition Order

Docket No.	Owner/lessee and operator	Powerplant No.	Generating station	Location
DCU-164	Colorado Ute Electric Association, Inc. Southern Colorado Power Division, Central Telephone & Utilities Corp.	1	W. N. Clark	Canon City, Colo.
DCU-165	do	2	do	Do.

Pursuant to section 2 (a) and (b) of the Energy Supply and Environmental Coordination Act of 1974, as amended, 15 U.S.C. 791 et seq. (ESECA), and Chapter II, Title 10 of the Code of Federal Regulations (CFR), Parts 303 and 305 [10 CFR Parts 303 and 305 (1976), as amended, 42 FR 23132 (1977)], the Department of Energy (DOE) hereby orders that the above listed powerplants shall be prohibited from burning natural gas or petroleum products as their primary energy source. Such prohibition shall become effective on the date stated in a Notice of Effectiveness to be served on the powerplants, pursuant to 10 CFR 303.10(b), 303.37(b) and 305.7, subsequent to issuance of this Prohibition Order.

Section 2 of ESECA requires that DOE make certain findings prior to issuing a Prohibition Order. On May 12, 1978, DOE published a notice of "Intention to Issue Prohibition Orders to Certain Powerplants" (43 FR 20534) that contained DOE's proposed conclusions with respect to those findings and the rationale therefor that DOE proposed to make with respect to the powerplants listed above. That notice invited interested persons to make written or oral presentation of data, views and arguments regarding the proposed findings and other matters. A public hearing was held in Colorado Springs, Colo., on May 31, 1978, for the purpose of receiving the oral presentation of data, views, and arguments. In addition, DOE provided an opportunity subsequent to the public hearing for supplemental written comments.

Based on a consideration of the data, views, and arguments received by DOE at the public hearing as well as supplemental data, views, and arguments received during the public comment period and an analysis of other information submitted to or otherwise available to DOE, DOE hereby finds with respect to the above listed powerplants that:

1. On June 22, 1974, each powerplant had the capability and necessary plant equipment to burn coal;

2. The burning of coal by each powerplant, in lieu of petroleum products or natural gas, is practicable and consistent with the purposes of ESECA;

3. Coal and coal transportation facilities will be available during the period this Prohibition Order will be in effect; and

4. The prohibition of each powerplant from burning natural gas or petroleum products as its primary energy source will not impair the reliability of service by such powerplant.

Stated below is the rationale for each finding ESECA requires DOE to make prior to issuing a Prohibition Order, and an evaluation of the significant, material issues raised by interested persons in their oral or written presentations of data, views and arguments. Such presentations were made in response to the notice of "Intention to Issue Prohibition Orders to Certain Powerplants" published in the FEDERAL REGISTER on May 12, 1978 (43 FR 20534). Where such presentations were adopted by DOE and resulted in changes in DOE's calculations these

are reflected in the specific finding. After an evaluation of the data, views and arguments presented by interested persons, DOE concludes that no issues or facts were presented that

natural gas and Boiler 2 was 73 percent coal and 27 percent natural gas.

B. Based Upon information provided by SCPD-CTUC at the hearing, con-

(b) Annual operating and maintenance costs

At the hearing SCPD-CTUC testified that the annual operating and

savings, the total annual cost of operating W. N. Clark 1 and 2 after conversion is estimated to be reduced by

Orders currently under consideration, if any. Therefore, the net annual revenue requirements of SCPD-CTUC

III. COAL AND TRANSPORTATION FACILITIES WILL BE AVAILABLE TO THIS POWERPLANT DURING THE PERIOD UN-

V 4 3 / 2 0 3 0 C 1 9 7 8

are reflected in the specific finding. After an evaluation of the data, views and arguments presented by interested persons, DOE concludes that no issues or facts were presented that render DOE unable to make the findings and therefore it must proceed with the issuance of the instant order.

Southern Colorado Power Division, Central Telephone & Utilities Corporation shall be referred to as the "utility" and as "SCPD-CTUC".

At the public hearing, SCPD-CTUC stated that W. N. Clark Unit No. 1 is owned by the Colorado-Ute Electric Association, Inc., and that it is leased and operated by Southern Colorado Power Division.

Attention is directed to the ESECA regulation (10 CFR, 303.2 Definitions) which defines a "Powerplant" to mean "a fossil-fuel fired steam electric generating unit that produces electric power for purposes of sale or exchange and includes any person who owns, leases, operates or controls any such unit." DOE, as a part of the ESECA Prohibition Order process, served a copy of the Notice of Intention to Issue a Prohibition Order to Southern Colorado Power Division in accordance with the definition of the "powerplant" that would be affected by the proposed order.

It should be noted that DOE has taken into account the information provided by SCPD-CTUC and this Prohibition Order identifies the owner, as well as the lessee and operator.

I. Capability and Necessary Plant Equipment to Burn Coal

DOE finds that on June 22, 1974, Powerplants Nos. 1 and 2 at W. N. Clark Generating Station (W. N. Clark 1 and 2) had, or thereafter acquired or were designed with the capability and necessary plant equipment to burn coal. This finding is based on the facts and interpretations stated below:

A. Based on information supplied to the Federal Power Commission (now the Federal Energy Regulatory Commission) by SCPD-CTUC and a site visit performed by DOE representatives, it has been determined that each powerplant had in place, on June 22, 1974, a boiler that was capable of burning coal.

The boilers had been designed and constructed or modified to burn coal as their primary energy source, notwithstanding the fact that on June 22, 1974, the powerplants may not have been burning coal as their primary energy source.

The 1977 annual fuel consumption information reported by SCPD-CTUC was used to calculate the heat input of W. N. Clark Boiler 1 and 2. Boiler 1 was 61 percent coal and 39 percent natural gas and Boiler 2 was 73 percent coal and 27 percent natural gas.

B. Based Upon information provided by SCPD-CTUC at the hearing, contacts with the U.S. Environmental Protection Agency and the Colorado Department of Health, Water Division, it has been determined that the upgrading of the ash handling, waste water treatment and solid waste disposal systems, as stated in Section I.B. of the Notice of Intention, will not be required for W. N. Clark 1 and 2 to burn coal 100 percent of the time.

C. DOE finds that on June 22, 1974, W. N. Clark 1 and 2 had all other significant plant equipment and facilities associated with the burning of coal.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that W. N. Clark 1 and 2 have the capability and necessary plant equipment to burn coal as stated above.

II. The Burning of Coal in Leiu of Natural Gas or Petroleum Products is Practicable and Consistent With the Purposes of ESECA.

DOE finds that the burning of coal at W. N. Clark 1 and 2 in lieu of natural gas or petroleum products is practicable and consistent with the purposes of ESECA. This finding is based upon the presumption that W. N. Clark 1 and 2 will be operated at an 82.0 percent capacity factor, (this represents a weighted average of each powerplant's projected capacity factor), have an average remaining useful life of 20 years (as of the date of this Prohibition Order and after the estimated date of conversion), and on the facts and interpretations stated below:

A. The Burning of Coal is Practicable

1. *Costs associated with the burning of coal.—(a) Capital investment costs.* Based upon information provided by SCPD-CTUC at the public hearing, contracts with the environmental Protection Agency and the Colorado Department of health, Water division, it has been determined that the capital investment costs of $650,000 (paragraph I.B. above) that would have been required for the acquisition and refurbishment of equipment and facilities as stated in Section II.A.1.a. of the Notice of Intention, have been excluded.

DOE has not included capital investment costs for air pollution control equipment of approximately $2,800,000 as suggested by SCPD-CTUC at the public hearing since these costs represent commitments made by the utility prior to the issuance of DOE's Order, and are not commitments made as a result of this Order.

(b) Annual operating and maintenance costs

At the hearing SCPD-CTUC testified that the annual operating and maintenance cost increase should be $126,600 (a 1977 cost equivalent based upon 100 percent natural gas burning). An evaluation of the $126,600 amount indicates that the utility has included all costs rather than those increases which would result from this Prohibition Order.

DOE's $37,000 amount represents an estimate of the incremental operating and maintenance cost increase caused by the switching from burning the present mixture of natural gas and coal to the burning of 100 percent coal at West Northwest Clark 1 and 2.

DOE has considered SCPD-CTUC's cost data but finds that its estimate of $37,000 should stand.

(c) *Fuel costs*

(i) Based on information supplied by the SCPD-CTUC at the public hearing, the price of natural gas available to W. N. Clark 1 and 2 is approximately $1.042 per Mcf. This represents $1.056 per million Btu's of natural gas, assuming 987,000 Btu's per Mcf.

(ii) Based on information supplied by the utility at the public hearing, the price of coal available to W. N. Clark 1 and 2 is approximately $0.67 per million Btu's. This represents $13.70 per ton of delivered coal, assuming 20.4 million Btu's per ton.

(iii) DOE estimates that the burning of coal in lieu of natural gas by these powerplants will result in the reduction of approximately $0.386 per million Btu's or $479,000 per year in fuel costs.

(iv) DOE finds that W. N. Clark 1 and 2 can burn coal as their primary energy source with a decrease in fuel costs as a result of this Prohibition Order.

(d) Total annual costs associated with conversion. As a result of this Prohibition Order to convert W. N Clark 1 and 2, there will be an estimated annual increase in operating and maintenance costs incurred, exclusive of fuel costs, of approximately $37,000 assuming coal is used to replace natural gas burned.

2. *Reasonableness of costs of conversion.* The foregoing analysis of the costs of conversion provided the basis for deciding whether the conversion of W. N. Clark 1 and 2 is reasonable. Financial impacts of the conversion will be felt by the utility and by the consumer.

As a result of the conversion, the utility will incur additional annual operating and maintenance costs, exclusive of fuel costs, of approximately $37,000 (see paragraph A.1.b.), but will experience an annual fuel cost savings of approximately $479,000 (see paragraph A.1.c.). Considering the fuel cost savings, the total annual cost of operating W. N. Clark 1 and 2 after conversion is estimated to be reduced by $442,000.

Since all increased costs of conversion will be offset by the decrease in fuel costs, it is estimated that there will be an overall net decrease in the cost of producing electricity at W. N. Clark 1 and 2.

The burning of 100% coal as the primary energy source at W. N. Clark 1 and 2 will result in an estimated annual equivalent savings of 1,256,000 Mcf of natural gas (or approximately 229,000 barrels of oil) that otherwise would be used in providing steam for electric power generation.

DOE finds that, (1) the increased annual operating and maintenace cost at the powerplants is offset by the current fuel cost differential between natural gas and coal burning at W. N. Clark 1 and 2, (2) the potential future increases in the fuel cost differential will favor coal and burning coal will result in even greater savings and (3) such action will be in the national interest.

3. Financial capabilities of SCPD-CTUC. DOE finds that compliance with a Prohibition Order to W. N. Clark 1 and 2 will be economically feasible. DOE's analysis took into consideration SCPD-CTUC's 1977 construction budget of $5.8 million, the 1977 total capitalization of $1.0 billion, and average remaining useful life of 20 years after conversion of W. N. Clark 1 and 2.

Total annual costs associated with conversion. The total estimated annual increase in costs associated with the burning of coal, as opposed to natural gas, attributable to compliance with this Prohibition Order would be $37,000. This also represents the total estimated annual incremental increase in revenue requirements of SCPD-CTUC. (DOE also took into consideration revenue requirements of SCPD-CTUC resulting from compliance with all outstanding Notices of Intention, to date, if any, to issue Prohibition or Construction Orders, and from all other Prohibition or Construction Orders, if any, issued to date under section 2(a) and (c) of ESECA to SCPD-CTUC powerplants.) This estimate of $37,000 in revenue requirements is based on an analysis described in an Ultrasystems Inc. report entitled "Computer Methodology For Coal Conversion Cost Reasonableness Determination," August 1976 (hereafter "Ultrasystems Computer Model").

The total estimated annual increase in costs of $37,000 associated with conversion will be offset by the potential aggregate value of fuel costs savings of approximately $479,000 attributable to compliance with this Prohibition Order and all other Prohibition Orders currently under consideration, if any. Therefore, the net annual revenue requirements of SCPD-CTUC should decrease by approximately $442,000.

DOE does not consider the effect of these added annual costs associated with conversion an unreasonable burden given the financial capabilities of the utility to assume such costs.

4. Consumer impact. The potential initial impact of a Prohibition Order to W. N. Clark 1 and 2 is a net decrease in revenues required from SCPD-CTUC consumers of approximately $.0006 per kilowatt hour of electricity sold by SCPD-CTUC. This estimate is based on DOE's analysis of the Ultrasystems Computer Model results.

The actual amount of the decrease will depend on the methods which SCPD-CTUC selects to finance the increased costs associated with burning coal as a primary energy source at W. N. Clark 1 and 2, the extent to which the cost decrease is spread among SCPD-CTUC customers, the regulations or policies of the regulatory agencies with jurisdiction over SCPD-CTUC regarding inclusion of such cost decrease in consumer rates, the actual amount of the fuel cost differential, and other factors.

B. Consistency with the purposes of ESECA. Because the issuance of a Prohibition Order to W. N. Clark 1 and 2 will discourage the use of natural gas or petroleum products and encourage the increased use of coal, DOE concludes that this action will be consistent with the purposes of ESECA to provide for a means to assist in meeting the essential needs of the United States for fuels.

On the basis of the environmental analysis which DOE is required to conduct prior to issuance of a Notice of Effectiveness of Prohibition Order, as well as the necessity for these powerplants to comply with the Clean Air Act, as amended, and other applicable environmental protection requirements, DOE concludes that issuance of this Prohibition Order to W. N. Clark 1 and 2 will be consistent with the purposes of ESECA to provide for a means to assist in meeting the essential needs of the United States for fuels in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that the burning of coal in lieu of natural gas or petroleum products is practicable and consistent with the purposes of ESECA as stated above.

III. Coal and Transportation Facilities Will Be Available to This Powerplant During the Period Until December 31, 1984.

A. Coal Availability

1. National coal reserves. United States coal reserves are more than sufficient to supply national needs for the foreseeable future. United States Department of the Interior, Bureau of Mines data show a demonstrated coal reserve base of over 438 billion tons. (*Demonstrated Coal Reserve Base of the United States on January 1, 1976*, Bureau of Mines (August 1977) (hereafter "BOM Survey")). Mining experience in the United States has indicated that, on a national basis at least one-half of the coal, 219 billion tons, in the reserve base may be technically and economically recoverable. To determine when certain quantities of these reserves are expected to be available, DOE has examined several studies, referenced herein, which together provide the best current evidence as to coal availability for the period ending December 31, 1984.

2. National coal production and demand. A comparison of estimated national coal production and national coal demand shows that there should be sufficient production of coal to meet the total national demand through 1984.

a. *National coal production.* It is conservatively estimated that it will be practicable to produce coal nationally in at least the following quantities:

Year	Production potential (million tons)
1978	745
1979	781
1980	818
1981	858
1982	899
1983	942
1984	987

The figures shown above are derived from *Projections of Energy Supply and Demand and Their Impacts, Energy Information Administration*, dated April 1978 (hereafter "Energy Supply and Demand Report"). The coal production forecast was derived from analytic procedures utilizing historical coal consumption patterns, in addition to derived demand under a forecast economic and energy case. DOE intends to fully update, for purposes of being current, its coal availability finding pertinent to W. N. Clark 1 and 2 prior to the issuance of a Notice of Effectiveness.

b. *National demand including ESECA Prohibition Order demand.* The estimated national demand, including any increased demand resulting from DOE actions under the au-

thority of section 2(a) of ESECA, is as follows (Energy Supply and Demand Report):

[In thousand tons]

Year	Potential Annual

2. *Route of coal shipment.* The primary route for coal delivery to W. N. Clark 1 and 2 originates in BOM Dis-

ble to these powerplants during the period until December 31, 1984 as stated above.

IV. *The prohibition of the burning of* L. 95-95, *supra;* or (b) the date marking termination of the period of time that DOE determines is required by

fectiveness, shall be filed within 30 days of such service of such notice. Application for modification or rescis-

V 4 3 1 2 0 3 0 OCT 19 78

thority of section 2(a) of ESECA, is as follows (Energy Supply and Demand Report):

Year	Demand (millions of tons)
1978	720
1979	758
1980	798
1981	841
1982	885
1983	932
1984	982

These demand projections were conservatively developed and include not only the actions already taken under ESECA but also all anticipated ESECA actions that may be taken in the future.

c. *National ESECA Prohibition Order demand.* DOE has estimated potential demand for coal resulting from this Prohibition Order, from all outstanding Notices of Intention to issue Prohibition Orders currently under consideration and from all other outstanding Prohibition Orders issued to date under authority of section 2(a) of ESECA to be as follows:

Year	Demand (million tons)
1978	9.6
1979	14.0
1980	20.4
1981	22.7
1982	29.5
1983	29.9
1984	29.9

(The above estimated demand figures include projections for Prohibition Orders issued on June 30, 1975 which are currently effective through December 31, 1978 and are subject to extension through December 31, 1984.)

3. *Characteristic coal, production and demand—a. Characteristic coal requirements for these powerplants.* Based on updated information provided by SCPD-CTUC at the public hearing, DOE concludes that dry-bottom boilers, of the type used at W. N. Clark 1 and 2, will be able to burn coal with the following characteristics and comply with all applicable air pollution control requirements:

BTU's/lb, 10,221, approx.
Moisture, 15.0 percent, max.
Ash, 20.0 percent, max.
Volatile, 15.0 percent, min.
Ash softening temp., 2200 (°F), max.
Sulfur, 0.70 percent, max.

b. *Characteristic coal demand from these powerplants.* The potential average annual demand for coal, of the type described above, which would result from this Prohibition order is estimated to be as follows:

[In thousand tons]

Year	Potential Annual demand
1979-84	61

c. *Characteristic coal available to these powerplants.* SCPD-CTUC presently purchases characteristic coal in the "spot market" from Bureau of Mines (BOM) District 17, in Fremont and Las Animas Counties, Colo. Based on information provided by the Denver Geological Survey, Fremont and Las Animas Counties have demonstrated reserves of 646 million short tons of coal. The Bureau of Mines Information Circular, 1975, entitled *The Reserve Base of U.S. Coals by Sulfur Content*, states that recoverable reserves by underground mining methods are generally estimated to be 50 percent of demonstrated reserves. Consequently, the estimated recoverable reserves pertinent here are 323 million short tons of coal. SCPD-CTUC has advised DOE that there are sufficient quantities of characteristic coal to meet the above-stated incremental annual demand at Twin Pines, GEC and Delanga Mines through 1984. DOE, therefore, finds that coal of the type that is burned at W. N. Clark 1 and 2 is available through 1984.

4. *State or local laws.* DOE has found no State or local laws or policies limiting the extraction or utilization of coal that would adversely affect these production figures, and none have been brought to DOE's attention.

5. *Conclusion.* DOE finds that coal of the characteristics required will be available to W. N. Clark 1 and 2 through 1984. Furthermore, on the basis of the Bureau of Mines Survey and the Energy Supply and Demand Report, DOE expects that national coal production potential will exceed the total national demand for coal in amounts sufficient in any year to meet the estimated potential additional demand represented by this Prohibition Order, from all outstanding NOI's to issue Prohibition Orders and from all other outstanding Prohibition Orders issued to date under authority of section 2(a) of ESECA.

B. *Coal transportation.*—1. *Location of powerplant and coal supply.* The primary and alternate source of coal supply for W. N. Clark 1 and 2 at Canon City, Colo., is from BOM District 17, Fremont and Las Animas Counties, Colo. SCPD-CTUC presently purchases coal in the "spot market" from coal mines in Fremont County, about 10 miles from the plant, and from another supplier in Las Animas County, approximately 110 miles distant.

2. *Route of coal shipment.* The primary route for coal delivery to W. N. Clark 1 and 2 originates in BOM District 17. Within BOM District 17 coal is presently being delivered from Fremont County, Colo. in the Florence coal field by truck, but the Denver and Rio Grande Western Railroad (D&RGW) is available to serve the plant.

3. *Originating trunk carrier.* SCPD-CTUC has advised DOE that within BOM District 17 there are several probable originating-destination truck carriers for transporting coal to W. N. Clark 1 and 2. These trucking companies include the following: (A) Ben Moschetti Trucking Co., which presently transports coal to W. N. Clark 1 and 2 from Twin Pines Mine in Fremont County, 6 days each week, 24 ton-load capacity per truck; (b) Corley Trucking Co., which also transports coal to W. N. Clark 1 and 2 from GEC Mineral Mines in Fremont County, 6 days each week, 30-ton load capacity per truck; and (C) Cal Garis Trucking Co., which now transports coal to W. N. Clark 1 and 2 from Delanga Mine in Las Animas county, 6 days each week, 20-30 ton-load capacity per truck. In addition, the Carestia Trucking Co. and the Berta Trucking Co. have indicated interest in transporting coal to the W. N. Clark powerplant if given the opportunity. Both would provide an added capacity availability of approximately 28 coal trucks. The above-mentioned trucking companies are able and willing to provide adequate transportation of coal to W. N. Clark 1 and 2 through December 31, 1984. DOE has not found nor has it been informed of any apparent constraints in transporting coal to W. N. Clark 1 and 2.

Whenever truck transportation of coal is not available, rail transportation, offered by D&RGW, is available to W. N. Clark 1 and 2 as an alternate mode.

DOE has not found nor has it been informed of any apparent constraints to carrying coal for any alternate carriers should they be used.

4. *Powerplant facilities.* W. N. Clark 1 and 2 presently have coal unloading facilities which are adequate to handle the projected coal demand. There are no apparent obstacles to the handling and delivery of coal to W. N. Clark 1 and 2.

5. *Conclusion.* Coal transportation facilities will be available for the period that this Prohibition Order is expected to be in effect since no significant constraints to coal delivery to W. N. Clark 1 and 2 presently exist.

DOE has not received any written or oral presentation of data, views or arguments contesting the accuracy of DOE's finding that coal and coal transportation facilities will be available to these powerplants during the period until December 31, 1984 as stated above.

IV. *The prohibition of the burning of natural gas or petroleum products as their primary energy source will not impair the reliability of service in the area served by the affected powerplant.* Based on an analysis of the information submitted to DOE by SCPD-CTUC, DOE finds that the issuance of a Prohibition Order to W. N. Clark 1 and 2 will not impair the reliability of service in the area served by these powerplants since there will be no outage as a result of a Prohibition Order. SCPD-CTUC has indicated that W. N. Clark 1 and 2 were designed to burn natural gas and coal and are currently burning coal. Therefore, there will be no impairment of reliability of service within the meaning of ESECA in the area served by W. N. Clark 1 and 2 as a result of this Prohibition Order.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that the prohibition of the burning of natural gas or petroleum products as the powerplant's primary energy source will not impair the reliability of service in the area served by the affected powerplants as stated above.

The prohibition of the burning of natural gas or petroleum products as the primary energy source by W. N. Clark 1 and 2 shall not become effective, (1) until either (a) the Administrator of the Environmental Protection Agency (EPA) has notified DOE, as required by 2(b) of ESECA, that the particular powerplant will be able on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a delayed compliance order pursuant to the provisions of the Clean Air Act, as amended, (CAA), 42 U.S.C. 7413(d)(5) and the Act of August 7, 1977, Pub. L. 95-95, 112, or (b) if no such notification is given by EPA, the date that the Administrator of EPA certifies is the earliest date that a particular powerplant will be able to burn coal and to comply with all applicable air pollution requirements, CAA, *supra;* Pub. L. 95-95, *supra;* and (2) until DOE has performed an analysis of the environmental impact of the issuance of a Notice of Effectiveness, pursuant to 10 CFR 208.3(a)(4) and 305.9, and has served the affected powerplant a Notice of Effectiveness, as provided in 10 CFR 303.10(b), 303.37(b) and 305.7.

The date stated in the Notice of Effectiveness shall be either (a) the date EPA determines in accordance with section 113(d) of the CAA, *supra;* Pub. L. 95-95, *supra;* or (b) the date marking termination of the period of time that DOE determines is required by the affected powerplants to acquire or refurbish equipment or facilities necessary to comply with the CAA, *supra;* Pub. L. 95-95, *supra,* whichever date is later.

In addition to the date on which the prohibition shall become effective, included with the Notice of Effectiveness, if appropriate, shall be a schedule of interim steps that should be taken by a stated date ("compliance schedule") to insure that the affected powerplant will be able to comply with the prohibition of the burning of natural gas or petroleum products as a primary energy source by the date stated in such notice. The compliance schedule may require actions by the powerplant at any time subsequent to service of the Notice of Effectiveness.

This Prohibition Order does not constitute a final agency action and is not effective prior to service of the Notice of Effectiveness. In accordance with 10 CFR 303.38, any person aggrieved by this Order may file an appeal with DOE's Office of Hearings and Appeals, in accordance with 10 CFR Part 303 Subpart H, but such appeal cannot be filed prior to service by DOE of the Notice of Effectiveness and, if filed, shall be filed within 30 days after the service of such notice. There has not been an exhaustion of administrative remedies until an appeal has been filed pursuant to Subpart H of Part 303 and the appellate proceeding is completed by the issuance of an order granting or denying the appeal.

Application may be made for modification or rescission of this Prohibition Order in accordance with the provisions of 10 CFR Part 303 Subpart J. An application for modification or rescission of a Prohibition Order based on significantly changed circumstances, which may occur during the interval between issuance of this Order and service of the Notice of Effectiveness, shall be filed within 30 days of such service of such notice. Application for modification or rescission based on significantly changed circumstances occurring after the service of such notice may be filed at any time.

If an application for a modification or rescission of this Prohibition Order is made in accordance with Subpart J of Part 303, any appeal of this Order under 10 CFR Part 303 Subpart H, shall be suspended until 30 days after an order has been issued in accordance with Subpart J or until 30 days from the date on which such application for modification or rescission may be treated as having been denied in all respects.

If made effective this Prohibition Order will be effective against any persons that, as of the date stated in the Notice of Effectiveness of this Order own, lease, operate or control the above listed powerplants and against any successors-in-interest or assignees of such persons.

Any terms utilized in this Prohibition Order have the same meaning as such terms have in 10 CFR Parts 303 and 305.

Any questions regarding this Prohibition Order should be directed to Mr. Walter A. Romanek, Director, Division of Coal Utilization, Department of Energy, 2000 M Street NW., Washington, D.C. 20461, 202-254-5436.

(Energy Supply and Environmental Coordination Act of 1974 (15 U.S.C. 791 et seq.) as amended by Pub. L. 95-70; Federal Energy Administration Act of 1974 (15 U.S.C. 761 et seq.) as amended by Pub. L. 95-70; Department of Energy Organization Act (42 U.S.C. 7101 et seq.); E.O. 11790 (39 FR 23185); E.O. 12009 (42 FR 46267).)

Issued in Washington, D.C., October 14, 1978.

BARTON R. HOUSE,
Assistant Administrator, Fuels Regulation, Economic Regulatory Administration.

CITY OF COLORADO SPRINGS DEPT. OF PUBLIC UTILITIES

Prohibition Order

Docket No.	Owner	Powerplant No.	Generating station	Location
DCU-166	City of Colorado Springs, Department of Public Utilities.	5	Martin Drake	Colorado Springs, Colo.
DCU-167	do	6	do	Do.
DCU-168	do	7	do	Do.

Pursuant to section 2 (a) and (b) of the Energy Supply and Environmental

V 4 3 1 2 0 3 0 C 1 9 7 8

Coordination Act of 1974, as amended, 15 U.S.C. 791 et seq. (ESECA), and Chapter II, Title 10 of the Code of Federal Regulations (CFR), Parts 303 and 305, (10 CFR Parts 303 and 305 (1976), as amended, 42 FR 23132 (1977)), the Department of Energy (DOE) hereby orders that the above listed powerplants shall be prohibited from burning natural gas or petroleum products as their primary energy source. Such prohibition shall become effective on the date stated in a Notice of Effectiveness to be served on the powerplants, pursuant to 10 CFR 303.10(b), 303.37(b) and 305.7, subsequent to issuance of this Prohibition Order.

Section 2 of ESECA requires that DOE make certain findings prior to issuing a Prohibition Order. On May 12, 1978, DOE published a notice of "Intention to Issue Prohibition Orders to Certain Powerplants" (43 FR 20534) that contained DOE's proposed conclusions with respect to those findings and the rationale therefor that DOE proposed to make with respect to the powerplants listed above. That notice invited interested persons to make written or oral presentation of data, views and arguments regarding the proposed findings and other matters. A public hearing was held in Colorado Springs, Colo. on May 31, 1978, for the purpose of receiving the oral presentation of data, views and arguments. In addition, DOE provided an opportunity subsequent to the public hearing for supplemental written comments.

Based on a consideration of the data, views and arguments received by DOE at the public hearing as well as supplemental data, views and arguments received during the public comment period and an analysis of other information submitted to or otherwise available to DOE, DOE hereby finds with respect to the above listed powerplants that:

1. On June 22, 1974, each powerplant had the capability and necessary plant equipment to burn coal;

2. The burning of coal by each powerplant, in lieu of petroleum products or natural gas, is practicable and consistent with the purposes of ESECA;

3. Coal and coal transportation facilities will be available during the period this Prohibition Order will be in effect; and

4. The prohibition of each powerplant from burning natural gas or petroleum products as its primary energy source will not impair the reliability of service by such powerplant.

Stated below is the rationale for each finding ESECA requires DOE to make prior to issuing a Prohibition Order, and an evaluation of the significant, material issues raised by interested persons in their oral or written presentations, of data, views and arguments. Such presentations were made in response to the notice of "Intention to Issue Prohibition Orders to Certain Powerplants" published in the FEDERAL REGISTER on May 12, 1978 (43 FR 20534). Where such presentations were adopted by DOE and resulted in changes in DOE's calculations these are reflected in the specific findings. After an evluation of the data, views and arguments presented by interested persons, DOE concludes that no issues or facts were presented that render DOE unable to make the findings and therefore it must proceed with the issuance of the instant order.

City of Colordao Springs, Department of Public Utilities shall be referred to as the "Utility" and as "CCS-DPU".

I. *Capability and necessary plant equipment to burn coal.* DOE finds that, on June 22, 1974, Powerplants Number 5, 6, and 7 at Martin Drake Generating Station (Martin Drake 5, 6, and 7) had, or thereafter acquired or were designed with the capability and necessary plant equipment to burn coal. This finding is based on the facts and interpretations stated below:

A. Based on information supplied to the Federal Power Commission (now Federal Energy Regulatory Commission) by CCS-DPU and a site visit performed by DOE representatives, it has been determined that each powerplant had in place, on June 22, 1974, boilers that were capable of burning coal. The boilers has been designed and constructed or modified to burn coal as their primary energy source, notwithstanding the fact that, on June 22, 1974, the powerplants may not have been burning coal as their primary energy source.

The 1977 annual fuel consumption information provided by CCS-DPU at the public hearing was used to calculate the heat input of Martin Drake biolers 5, 6, and 7. Boiler 5 was 97.6 percent coal and 2.4 percent natural gas, Boiler 6 was 84.5 percent coal and 15.5 natural gas and Boiler 7 was 90.4 percent coal and 9.6 percent natural gas.

Based on information provided by CCS—DPU, the historical pattern of natural gas usage at Martin Drake Generating Station has tended to decrease over the past few years, but the relative share of the total natural gas consumed by individual powerplants has fluctuated. Even though Martin Drake 5 and 7 burned relatively small quantities of natural gas in 1977, issuance of a Prohibition Order to Martin Drake 5, 6, and 7 appears necessary to preclude potential increased use of natural gas by the powerplants which are not issued an order. In proposing to issue a Prohibition Order to Martin Drake 5, 6, and 7, DOE has considered and evaluated the effect of issuing an order to some of the individual powerplants and not to others and concluded that the purposes of ESECA are best accomplished by the issuance of this Order.

B. Based on information CCS-DPU provided to DOE during the abovementioned site visit and other information available to DOE, it has been determined that Martin Drake 5, 6, and 7 would not have to upgrade an ash handling system, a waste-water treatment system and a solid waste disposal system in order to burn coal 100 percent of the time.

C. DOE finds that, on June 22, 1974, Martin Drake 5, 6, and 7 had all other significant plant equipment and facilities associated with the burning of coal.

D. Within the meaning of ESECA and the regulations promulgated pursuant thereto, absence of the facilities listed in paragraph B, above, does not constitute a lack of capability and necessary plant equipment to burn coal as of June 22, 1974.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that Martin Drake 5, 6, and 7 have the capability and necessary plant equipment to burn coal as stated above.

II. *The burning of coal in lieu of natural gas or petroleum products is practicable and consistent with the purposes of ESECA.* DOE finds that the burning of coal at Martin Drake 5, 6, and 7 in lieu of natural gas or petroleum products is praticable and consistent with the pruposes of ESECA. This finding is based upon the presumption that Martin Drake 5, 6, and 7 will be operated at a 60.3 percent capacity factor (this represents a weighted average of each powerplant's projected capacity factor), have a remaining useful life of 32 years (as of the date of this Prohibition Order), are expected to have at least 31 years of remaining useful life after conversion of the powerplants, and on the facts and interpretations stated below:

A. *The burning of coal is practicable*—1. *Costs associated with burning coal*—a. *Capital investment costs.* Based upon information provided by CCS-DPU at the public hearing, it has been determined that the capital investment costs of $3,406,000 for the acquistion and refurbishment of equipment and facilities, as stated in section II.A.1.a. of the Notice of Intention, should be excluded.

b. *Annual operating and maintenance costs.* DOE has considered the statements made by CCS-DPU at the public hearing but concludes that there are approximately $127,000 increase in annual operating and maintenance costs associated with the

burning of 100 percent coal at Martin Drake 5, 6, and 7.

c. *Fuel costs.* (i) Based on information supplied by the utility, the price of natural gas available to Martin Drake 5, 6, and 7 is approximately $1.49 per million Btu's. This represents $1.47 per Mcf of natural gas, assuming 984,000 Btu's per Mcf.

(ii) Based on information supplied by the Federal Energy Regulatory Commission and from other sources available to DOE, the price of coal available to Martin Drake 5, 6, and 7 is approximately $0.99 per million Btu's. This represents $20.27 per ton of coal, assuming 20.5 million Btu's per ton.

(iii) DOE estimates that the burning of 100 percent coal by these powerplants will result in an overall reduction of approximately $0.51 per million Btu's, or $787,000 per year in fuel costs.

(iv) Based on information supplied by CCS-DPU, DOE has determined that Martin Drake 5, 6, and 7 are presently burning coal. DOE, therefore, finds that Martin Drake 5, 6, and 7 can continue to burn coal as their primary energy source with a decrease in fuel costs as a result of the Prohibition Order.

d. *Total annual costs associated with conversion.* As a result of this Prohibition Order to Martin Drake 5, 6, and 7, there will be an estimated total annual increase in costs incurred, exclusive of fuel costs, of approximately $137,000.

2. *Reasonableness of costs of conversion.* The foregoing analysis of the costs of conversion provides the basis for deciding whether the conversion of Martin Drake 5, 6, and 7 is reasonable.

As a result of conversion, the utility will incur additional annual operating and maintenance costs, exclusive of fuel costs, of approximately $137,000 (see paragraph A.1.b.), but will experience an annual fuel cost savings of approximately $787,000 (see paragraph A.1.c.). Considering the fuel cost savings, the total annual cost of operating Martin Drake 5, 6, and 7 after conversion is estimated to be reduced by $650,000.

Since the increased cost of conversion will be offset by the decrease in fuel costs, it is estimated that there will be an overall net decrease in the cost of producing electricity at Martin Drake 5, 6, and 7.

The burning of 100 percent coal at Martin Drake 5, 6, and 7 will result in an estimated annual equivalent savings of 1,584,000 Mcf of natural gas (or approximately 260,000 barrels of oil equivalent) that otherwise would be used in providing steam for electric power generation.

DOE finds that, since the increased annual operating and maintenance costs at Martin Drake 5, 6, and 7 are offset by the current fuel cost differential between natural gas and coal burning at these powerplants and because of potential future increases in the fuel cost differential in favor of coal, the additional costs associated with burning coal are reasonable.

3. *Financial capabilities of CCS-DPU.* DOE finds that compliance with a Prohibition Order to Martin Drake 5, 6, and 7 will be economically feasible. DOE's analysis took into consideration CCS-DPU's 1978 construction budget of $52.5 million, the total capitalization of the utility of $334 million and the 31 years remaining useful life after conversion of Martin Drake 5, 6, and 7.

Total annual costs associated with conversion. The total estimated annual increase in costs associated with the burning of coal, as opposed to natural gas, attributable to compliance with this Prohibition Order would be $137,000. This also represents the total estimated annual incremental increase in revenue requirements of CCS-DPU. (DOE also took into consideration revenue requirements of CCS-DPU resulting from compliance with all Notices of Intention, to date, if any, to issue Prohibition or Construction Orders, and from all other Prohibition or Construction Orders, if any, issued to date under authority of section 2 (a) and (c) of ESECA to CCS-DPU powerplants.) This estimate of $137,000 in revenue requirements is based on an analysis described in an Ultrasystems Inc. report entitled "Computer Methodology for Coal Conversion Cost Reasonableness Determination," August 1976 (hereafter "Ultrasystems Computer Model").

The total estimated annual increase in costs of $137,000 associated with conversion will be offset by the potential aggregate value of fuel costs savings of approximately $787,000 attributable to compliance with this Prohibition Order and all other Prohibition Orders currently under consideration, if any. Therefore, the net annual revenue requirements of CCS-DPU should decrease by approximately $650,000.

DOE does not consider the effect of these added annual costs associated with conversion an unreasonable burden given the financial capabilities of the utility to assume such costs.

4. *Consumer impact.* The potential initial impact of a Prohibition Order to Martin Drake 5, 6, and 7 is a net decrease in revenues required from CCS-DPU consumers of approximately $0.0005 per kilowatt hour of electricity sold by CCS-DPU. This estimate is based on DOE's analysis of the Ultrasystems Computer Model results.

B. *Consistency with the purposes of ESECA.* Because the issuance of a Prohibition Order to Martin Drake 5, 6, and 7 will discourage the use of natural gas or petroleum products and encourage the increased use of coal, DOE concludes that this action will be consistent with the purposes of ESECA to provide for a means to assist in meeting the essential needs of the United States for fuels. On the basis of the environmental analysis which DOE is required to conduct prior to issuance of a Notice of Effectiveness of a Prohibition Order, as well as the necessity for these powerplants to comply with the Clean Air Act, as amended, and other applicable environmental protection requirements, DOE concludes that issuance of a Prohibition Order to Martin Drake 5, 6, and 7 will be consistent with the purposes of ESECA to provide for a means to assist in meeting the essential needs of the United States for fuels in a manner which is consistent, to the fullest extent practicable, with existing national commitments to protect and improve the environment.

DOE has not received any written or oral presentation of data, views, or arguments that would negate DOE's finding that the burning of coal in lieu of natural gas or petroleum products is practicable and consistent with the purposes of ESECA as stated above.

III. *Coal and coal transportation facilities will be available to these powerplants during the period until December 31, 1984.*—A. *Coal availability.*—1. *National coal reserves.* United States coal reserves are more than sufficient to supply national needs for the foreseeable future. U.S. Department of the Interior, Bureau of Mines data show a demonstrated coal reserve base of over 438 billion tons. ("Demonstrated Coal Reserve Base of the United States on January 1, 1976," Bureau of Mines (August 1977) (hereafter "BOM Survey")). Mining experience in the United States has indicated that, on a national basis at least one-half of the coal, 219 billion tons, in the reserve base may be technically and economically recoverable. To determine when certan quantities of these reserves are expected to be available, DOE has examined several studies, referenced herein, which together provide the best current evidence as to coal availability for the period ending December 31, 1984.

2. *National coal production and demand.* A comparison of estimated national coal production and national coal demand shows that there should be sufficient production of coal to meet the total national demand through 1984.

a. *National coal production.* It is conservatively estimated that it will be practicable to produce coal nationally in at least the following quantities:

Year	Production potential (million tons)
1978	745
1979	781

(The above estimated demand figures include projections for Prohibition Orders issued on June 30, 1975 which are currently effective through

ESECA. In addition, CCS-DPU indicates that it can purchase coal for Martin Drake 5, 6, and 7 in the "spot market."

to Martin Drake 5, 6, and 7 presently exist.

DOE has not received any written or oral presentation of data, views or ar-

Drake 5, 6, and 7 shall not become effective (1) until either (a) the Administrator of the Environmental Protection Agency (EPA) has notified the

filed pursuant to Subpart H of Part 303 and the appellate proceeding is completed by the issuance of an order granting or denying the appeal.

V 43 I 203 OCT 19 78

Year	Production potential (million tons)
1978	745
1979	781
1980	818
1981	858
1982	899
1983	942
1984	987

The figures shown above are derived from "Projections of Energy Supply and Demand and Their Impacts, Energy Information Administration," dated April 1978 (hereafter "Energy Supply and Demand Report"). The coal production forecast was derived from analytic procedures utilizing historic coal consumption patterns, in addition to derived demand under a forecast economic and energy case. DOE intends to fully update, for purposes of being current, its coal availability finding pertinent to Martin Drake 5, 6, and 7 prior to the issuance of a Notice of Effectiveness.

b. *National demand including ESECA Prohibition Order demand.* The estimated national demand, including any increased demand resulting from DOE actions under the authority of section 2(a) of ESECA, is as follows (Energy Supply and Demand Report):

Year	Demand (millions of tons)
1978	720
1979	758
1980	798
1981	841
1982	885
1983	932
1984	982

These demand projections were conservatively developed and include not only the actions already taken under ESECA but also all anticipated ESECA actions that may be taken in the future.

c. *National ESECA prohibition order demand.* DOE has estimated potential demand for coal resulting from this Prohibition Order, from all outstanding Notices of Intention to issue Prohibition Orders currently under consideration and from all other outstanding Prohibition Orders issued to date under authority of section 2(a) of ESECA to be as follows:

Year	Demand (million tons)
1978	9.6
1979	14.0
1980	20.4
1981	22.7
1982	26.5
1983	29.9
1984	29.9

(The above estimated demand figures include projections for Prohibition Orders issued on June 30, 1975 which are currently effective through December 31, 1978 and are subject to extension through December 31, 1984.)

3. *Characteristic coal, production and demand.*—a. *Characteristic coal requirements for these powerplants.* Based on updated information provided by CCS-DPU at the public hearing, DOE concludes that wet-bottom boilers, of the type used at Martin Drake 5, 6, and 7 will be able to burn coal with the following characteristics and comply with all applicable air pollution control requirements:

BTU's/lb (approximate)	10,270
Moisture (maximum percent)	15.0
Ash (maximum percent)	20.0
Volatile (maximum percent)	15.0
Ash softening temp. (maximum °F)	2,200
Sulfur (maximum percent)	0.56

b. *Characteristic coal demand from these powerplants.* The potential average annual demand for coal, of the type described above, which would result from this Prohibition Order is estimated to be as follows:

POTENTIAL ANNUAL DEMAND

Year	Thousand tons
1979–1984	76

c. *Characteristic coal available to these powerplants.* DOE has found that CCS-DPU has received three long-term contracts from Pittsburg-Midway Coal Co., Colowyo Coal Co., and Empire Energy Coal Co. for supplies to Martin Drake 5, 6, and 7 of characteristic coal through 1984.

4. *State and local laws.* DOE has found no State or local laws or policies limiting the extraction or utilization of coal that would adversely affect these production figures, and none have been brought to DOE's attention.

5. *Conclusion.* On the basis of CCS-DPU's present coal contract commitments, DOE finds that coal of the characteristics required will be available to Martin Drake 5, 6, and 7 through 1984. Furthermore, on the basis of the "BOM Survey," the Coal Mine Expansion Study (May 1976), the Availability Study as revised November 10, 1977 and the FEA 1976 National Energy Outlook, DOE expects that national coal production potential will substantially exceed the total national demand for coal in amounts sufficient in any year to meet the estimated potential additional demand resulting from this Prohibition Order, from all outstanding NOI's to issue Prohibition Orders, and from all outstanding Prohibition Orders issued to date under authority of section 2(a) of ESECA. In addition, CCS-DPU indicates that it can purchase coal for Martin Drake 5, 6, and 7 in the "spot market."

B. *Coal transportation.*—1. *Location of powerplants and coal supply.* Based on information provided by CCS-DPU, coal for Martin Drake 5, 6, and 7 will be supplied and transported from Colowyo Coal Co. and Empire Energy Corp., which are located in Moffat County, Colo., and from Pittsburg-Midway, which is located in Routt County, Colo. to Martin Drake 5, 6, and 7 at Colorado Springs, Colo.

2. *Route of coal shipment.* Based on information provided to DOE by CCS-DPU, the primary route for coal delivery for Martin Drake 5, 6, and 7 would originate on the Craig Branch of the Denver & Rio Grande Western Railroad (D&RGWRR) and later would switch into the Drake Plant so that all coal movements would be completed on the D&RGWRR.

3. *Originating trunk carrier.* D&RGWRR, the expected carrier of coal for Martin Drake 5, 6, and 7, has indicated that it is able and willing to acquire any needed capacity involved in shipment to Martin Drake 5, 6, and 7.

Based on an FEA study, Utility analysis of Coal Transportation Availability, November 1976, DOE has concluded that for all potential Prohibition Order condidates studied, there will be no major constraints in transporting coal. The study examined existing rail transportation car capacity, water transportation capacity, including unloading docks, where applicable, and took into account projections made by all carriers to meet the anticiapated demand for all types of transportation facilities assuming all powerplants studied were to receive orders under section 2(a) of ESECA.

D&RGWRR has indicated that the rail facilities at Moffat County and Routt County, Colo. are readily available to CCS-DPU and that the D&RGWRR has adequate handling and loading facilities to service the required coal volumes.

DOE has not found nor has it been informed of any apparent constraints to transporting coal.

4. *Powerplant facilities.* Martin Drake 5, 6, and 7 presently have coal unloading facilites which CCS-DPU has advised DOE are adequate to handle the projected coal demand. There are no apparent obstacles to the handling and delivery of coal to Martin Drake 5, 6, and 7.

5. *Conclusion.* On the basis of the information discussed above, DOE finds that coal transportation facilities will be available for the period that this Prohibition Order is expected to be in effect since no significant constraints to coal delivery over the primary route to Martin Drake 5, 6, and 7 presently exist.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that coal and coal transportation facilities will be available to these powerplants during the period until December 31, 1984.

IV. *The prohibition of the burning of natural gas or petroleum products as their primary energy source will not impair the reliability of service in the area served by the affected powerplants.* At the public hearing CCA-DPU stated that reliability of service would be measurably and detrimentally affected if the prohibition order was issued without granting flexibility to allow for loss of pulverizers at capacity loads or loss of emission control equipment at capacity loads. CCS-DPU was concerned that the power pools that they participate in may not be able to provide the reserve capacity needed in the case of emergency failure of pulverizers or emission control equipment. CCS-DPU proposed that the Martin Drake's Prohibition Order contain provisions allowing the utility to switch to natural gas firing under certain predetermined situations.

DOE interprets this voicing of concern as constituting a request for anticipatory relief, on the face of the Orders, from the potential effects of the Orders prior to their being made effective by issuance of a Notice of Effectiveness (NOE).

Should a problem arise after receipt of an NOE, DOE is prepared to respond and work with the utility in a timely manner.

Based on an analysis of the information submitted to DOE by CCS-DPU, DOE finds that the issuance of a Prohibition Order to Martin Drake 5, 6, and 7 will not impair the reliability of service in the area served by these powerplants since there will be no outage as a result of a Prohibition Order.

CCS-DPU has indicated that Martin Drake 5, 6, and 7 were designed to burn natural gas and coal and are currently burning coal. Therefore, there will be no impairment of reliability of service within the meaning of ESECA in the area served by Martin Drake 5, 6, and 7 as a result of this Prohibition Order.

DOE has not received any written or oral presentation of data, views or arguments that would negate DOE's finding that the prohibition of the burning of natural gas or petroleum products as the powerplants' primary energy source will not impair the reliability of service in the area served by the affected powerplants.

The prohibition of the burning of natural gas or petroleum products as the primary energy source by Martin Drake 5, 6, and 7 shall not become effective (1) until either (a) the Administrator of the Environmental Protection Agency (EPA) has notified the DOE, as required by 2(b) of ESECA, that a particular powerplant will be able on and after July 1, 1975, to burn coal and to comply with all applicable air pollution requirements without a delayed compliance order pursuant to the provisions of the Clean Air Act, as amended (CAA), 42 U.S.C. 7413 (d)(5) and the Act of August 7, 1977, Pub. L. 95-95, section 112, or (b) if no such notification is given by EPA, the date that the Administrator of EPA certifies is the earliest date that the particular powerplant will be able to burn coal and to comply with all applicable air pollution requirements, CAA, supra; Pub. L. 95-95, supra; and (2) until DOE has performed an analysis of the environmental impact of the issuance of a Notice of Effectiveness, pursuant to 10 CFR 208.3(a)(4) and 305.9, and has served the affected powerplant a Notice of Effectiveness, as provided in 10 CFR 303.10(b), 303.37(b) and 305.7.

The date stated in the Notice of Effectiveness shall be either (a) the date EPA determines in accordance with section 113(d) of the CAA, supra; Pub. L. 95-95, supra, or (b) the date marking termination of the period of time that DOE determines is required by the affected powerplants to acquire or refurbish equipment or facilities necessary for coal burning by the affected powerplants other than equipment or facilities necessary to comply with the CAA, supra; Pub. L. 95-95, supra, whichever date is later.

In addition to the date on which the prohibition shall become effective, included with the Notice of Effectiveness, if appropriate, shall be a schedule of interim steps that should be taken by a stated date ("compliance schedule") to insure that the affected powerplant will be able to comply with the prohibition of the burning of natural gas or petroleum products as a primary energy source by the date stated in such notice. The compliance schedule may require actions by the powerplant at any time subsequent to service of the Notice of Effectiveness.

This Prohibition Order does not constitute a final agency action and is not effective prior to service of the Notice of Effectiveness. In accordance with 10 CFR 303.38, any person aggrieved by this Order may file an appeal with DOE's Office of Hearings and Appeals, in accordance with 10 CFR Part 303 Subpart H, but such appeal cannot be filed prior to service by DOE of the Notice of Effectiveness and, if filed, shall be filed within 30 days after the service of such notice. There has not been an exhaustion of administrative remedies until an appeal has been filed pursuant to Subpart H of Part 303 and the appellate proceeding is completed by the issuance of an order granting or denying the appeal.

Application may be made for a modification or rescission of this Prohibition Order in accordance with the provisions of 10 CFR Part 303 Subpart J. An application for modification or rescission of a Prohibition Order based on significantly changed circumstances, which may occur during the interval between issuance of this Order and service of the Notice of Effectiveness, shall be filed within 30 days of such service of such notice. Application for modification or rescission based on significantly changed circumstances occurring after the service of such notice may be filed at any time.

If an application for a modification or rescission of this Prohibition Order is made in accordance with Subpart J of Part 303, any appeal of this Order under 10 CFR Part 303 Subpart H, shall be suspended until 30 days after an order has been issued in accordance with Subpart J or until 30 days from the date on which such application for modification or rescission may be treated as having been denied in all respects.

If made effective this Prohibition Order will be effective against any persons that, as of the date stated in the Notice of Effectiveness of this Order, own, lease, operate or control the above listed powerplants and against any successors-in-interest or assignees of such persons.

Any terms utilized in this Prohibition Order have the same meaning as such terms have in 10 CFR Parts 303 and 305.

Any questions regarding this Prohibition Order should be directed to Mr. Walter A. Romanek, Director, Division of Coal Utilization, Department of Energy, 2000 M Street NW., Washington, D.C. 20461, 202-254-3910.

(Energy Supply and Environmental Coordination Act of 1974 (15 U.S.C. 791 et seq.), as amended by Pub. L. 95-70; Federal Energy Administration Act of 1974 (15 U.S.C. 761 et seq.) as amended by Pub. L. 95-70; Department of Energy Organization Act (40 U.S.C. 7101 et seq.); E.O. 11790 (39 FR 23185); E.O. 12009 (42 FR 46267).)

Issued in Washington, D.C., October 14, 1978.

BARTON R. HOUSE,
Assistant Administrator, Fuels Regulation, Economic Regulatory Administration.

DEPARTMENT OF ENERGY

Office of Hearings and Appeals

ISSUANCE OF DECISIONS AND ORDERS

Week of July 24 Through July 28, 1978

Notice is hereby given that during the week of July 24 through July 28, 1978, the Decisions and Orders summarized below were issued with respect to Appeals and Applications for Exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions which were dismissed by the Office of Hearings and Appeals and the basis for the dismissal.

APPEALS

Baltimore Gas & Electric Co., Baltimore, Md., DEA-0072, Naphtha

Baltimore Gas & Electric Co. (B.G. & E.) filed an Appeal from a Decision and Order which the Economic Regulatory Administration of the DOE issued to the firm on November 8, 1977. In that Order, the Economic Regulatory Administration waived the use limitation set forth in 10 CFR 211.29(e), and thereby allowed B.G. & E. to use up to a total of 200,000 barrels of naphtha as SNG feedstock for the purpose of completing testing and startup at the firm's Sollers Point SNG manufacturing plant. This allocation was effective for the 3 month period ending on December 31, 1977. In addition, the Economic Regulatory Administration denied B.G. & E.'s request for a temporary assignment of a base period use and suppliers of an additional 700,000 barrels of naphtha which B.G. & E. sought to use as SNG feedstock for the commercial operation of the Sollers Point facility during the 1977-78 winter heating season. In considering the B.G. & E. Appeal, the DOE rejected the firm's contention that certain provisions of the November 8 Order were unclear. The DOE determined that in the November 8 Order the Economic Regulatory Administration had left no doubt that B.G. & E. could use the high contaminant naphtha that it held in inventory as SNG feedstock for the Sollers Point facility. The DOE also determined that the Economic Regulatory Administration had clearly indicated in the November 8 Order that because B.G. & E.'s inventory of naphtha was adequate for its purposes, an assignment of new suppliers of naphtha was unnecessary. Furthermore, the DOE found that B.G. & E. had failed to advance any evidence or legal argument in support of its contention that it was arbitrary for the Economic Regulatory Administration to have determined that the preparation of an environmental impact statement was a prerequisite to the temporary assignment of SNG feedstock to the firm's Sollers Point facility. The DOE further found that B.G. & E. had not demonstrated that the ERA's determination to review the firm's request for assignment of SNG feedstock in accordance with recent amendments to 10 CFR 211.29 was a tactic chosen for purposes of delay or had injured it in any way. The DOE accordingly concluded that B.G. & E. had not established that the November 8 Order was in any way erroneous and the B.G. & E. Appeal was denied.

Keener Oil Co., Tulsa, Okla., FEA-1387, Crude Oil

The Keener Oil Co. appealed from a Remedial Order which the Deputy Regional Administrator of FEA Region VI issued to the firm on June 10, 1977. In the Remedial Order, the Regional Office concluded that Keener had sold crude oil from three properties at prices which exceeded the maximum levels permitted under FEA Regulations. With respect to the Schenck lease, the Remedial Order found that the overcharges resulted from Keener's use of an incorrect May 15, 1973 posted price. The Remedial Order also found that Keener had incorrectly treated its Ellen lease as a "new" property with no base production control level (BPCL). The Remedial Order determined that production at the Ellen lease was instead subject to the BPCL of a larger property out of which the Ellen lease was formed. Finally, the Remedial Order determined that in November 1973 Keener erroneously calculated the BPCL for the Harjo lease by reference to the amount of crude oil "produced" rather than to the amount "produced and sold." On Appeal, Keener contended that the May 15, 1973 posted price which it used with respect to the Schenck lease was correct. The DOE rejected this contention on the grounds that Keener had not presented any evidence of a "publicly circulated written offer" which shows that the price it used was the highest posted price in effect on May 15, 1973 in Harper County, Kans. where the Schenck lease is located. With respect to the Ellen property, Keener claimed that it acquired the right to produce crude oil from the lease as a result of the subdivision of a larger tract by assignment in June 1973 and that the Ellen lease was therefore a separate and distinct different operation from the original tract. The DOE found, however, that under the provisions of FEA Ruling 1975-15, a post-1972 subdivision of property does not establish a new property for the purposes of measuring the BPCL and determining whether any new or released crude oil has been produced. Finally, Keener claimed that the error which it made in calculating the BPCL for the Harjo property during November 1973 also occurred in other months at the Harjo lease and on sixteen other crude oil producing properties as well. Keener contended that in these other instances the error produced undercharges which it should be permitted to offset against the overcharges which occurred on the Harjo lease in November 1973. In view of the fact that these undercharges may entirely offset the overcharges, the DOE concluded that the Remedial Order should be remanded to Region VI for a determination as to whether such an offset should be permitted. Accordingly, the Remedial Order was remanded with respect to this issue and Keener's Appeal was denied in all other respects.

Miranda Fuel Oil Co., Inc., New York, N.Y. DRA-0088, No. 2 and No. 4 oil

Miranda Fuel Oil Co., Inc. (Miranda) appealed from a Remedial Order which DOE Region II issued to the firm on December 9, 1977. The Remedial Order concluded that Miranda had sold No. 2 oil and No. 4 oil to six large volume purchasers at unlawful prices. In considering Miranda's Appeal, the DOE found that Miranda had acquired two of these customers after May 15, 1973 and that, contrary to Miranda's assertion, Miranda was not permitted to create new classes of purchaser for these customers but was required to place them in existing classes. The DOE also found that neither of the two new customers constituted a "new market" within the meaning of 10 CFR 212.111. The DOE further found that the Remedial Order's determination of Miranda's May 15, 1973 selling prices was consistent with 10 CFR 212.93 and DOE Ruling 1977-5 and was therefore correct. The DOE also rejected Miranda's argument that since the firm delivered product directly from its suppliers to customers of Universal Coal Co., Inc. (Universal) Miranda rather than Universal should have been treated as the retailer with respect to those customers. The DOE found in this regard that Miranda had not shown that it was the relevant "retailer" as that term is defined at 10 CFR 212.31 and that the Remedial Order had properly treated Miranda as a reseller of covered products to Universal. Finally, the DOE concluded that the fact that the Regional Office's preliminary audit findings differed somewhat from the formal charges contained in the Notice of Probable Violation and the Remedial Order which were subsequently issued to Miranda does not indicate that the Remedial Order is defective. Accordingly, the Miranda Appeal was denied.

REQUESTS FOR EXCEPTION

Natrogas, Inc., Minneapolis, Minn., DXE-1355 propane

Natrogas, Inc. (Natrogas) requested an extension of the exception relief which the DOE had previously granted to the firm from the provisions of 10 CFR 211.9. *Natrogas, Inc.*, 1 DOE Par. 80,141 (December 6, 1977); *Natrogas, Inc.*, 1 DOE Par. 82,524 (January 10, 1978); *Natrogas, Inc.*, 1 DOE Par. 82,560 (April 13, 1978). The extension request, if granted, would result in the issuance of an Order assigning Natrogas a supplier of propane whose wholesale price is less than the price currently charged by the firm's base period suppliers of that product. In considering the request, the DOE determined that the price which Natrogas' base period suppliers were currently charging for propane was within the range of prices which Natrogas' competitors pay for that product in the firm's market area. The DOE therefore concluded that any financial difficulties which Natrogas might be experiencing were not directly caused by the application of the DOE regulatory provisions to the firm and accordingly denied Natrogas' exception request.

Navajo Refining Co., Artesia, N.Mex., DXE-1048 Crude Oil

Navajo Refining Co. (Navajo) filed an Application for Exception from the provisions of 10 CFR 211.67 (the Domestic Crude Oil Entitlements Program) which, if granted, would relieve the firm of its obligation to purchase entitlements for the months of June through November 1978 to account for its crude oil receipts and runs to stills during the months of April through September 1978. In support of its Application, Navajo submitted projected financial and operating material for its current fiscal year ending December 31, 1978. Based on the Navajo submission, the DOE determined

that Navajo would incur an obligation to purchase entitlements during its current fiscal year which would prevent it from achieving either its historical profit margin or historical return on invested capital (ROIC) The DOE concluded therefore that exception relief was warranted under the criteria set forth in *Delta Refining Co.*, 2 FEA Par. 83,275 (September 11, 1975), and *Beacon Oil Co.*, 3 FEA Par. 83,209 (June 8, 1976). In determining the amount of exception relief which should be granted Navajo under the *Delta-Beacon* criteria, the DOE found that Navajo's projections indicated that even if the firm were relieved of its entire entitlement purchase obligation for the current fiscal year it would still not attain either its historical profit margin or ROIC. Accordingly, in a Proposed Decision and Order issued to the firm on June 22, 1978, the DOE tentatively granted Navajo an exception which relieved it of any obligation to purchase entitlements during the 6 month period June through November 1978. *See* 41 FR 26394 (May 18, 1976). Since no objection to the proposed determination was filed within the time period specified in the DOE regulations, the Decision and Order was issued to Navajo in final form on July 28, 1978. The Decision noted that subsequent reviews will be conducted of the exception relief which Navajo was granted and that the firm will be required to purchase entitlements if a determination is made that it received excessive benefits.

Peninsular Gas Co., Omaha, Nebr., DXE-0514 Propane

Peninsular Gas Co. (Peninsular) filed an Application for Exception from the provisions of the Mandatory Petroleum Allocation Regulations. The exception request, if granted, would extend the exception relief previously granted to the firm and would permit it to increase its base period use of propane. *Peninsular Gas Co.*, 1 DOE Par. 81,039 (December 16, 1977). In considering the exception application, the DOE found that Peninsular continue to experience a dramatic increase in its propane requirements since the base period so that a gross disparity existed between the firm's current propane requirements for peak shaving and its use of propane during the 1972-73 base year. In addition, the DOE found that unless exception relief were granted permitting Peninsular to increase its use of propane for peak shaving the firm's customers could experience a curtailment of their natural gas services. Under these circumstances, the DOE determined that exception relief was appropriate and therefore adjusted Peninsular's base period volumes of propane for each calendar quarter ending December 31 and March 31.

R. W. Tyson Producing Co., Inc., Jackson, Miss., DXE-1069, Crude Oil

R. W. Tyson Producing Co., Inc. (Tyson) filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D. The exception request, if granted, would result in the extension of the exception relief previously granted to Tyson and would permit the firm to continue to sell 100 percent of the crude oil produced for the benefit of the working interest owners of the Stevens No. 4 and No. 5 wells located in Perry County, Miss., at upper tier ceiling prices. *R. W. Tyson Producing Co., Inc.*, 1 DOE Par. 82,542 (February 27, 1978). In considering the exception application, the DOE determined that the working interest owners had continued to incur increased operating expenses at the two wells and that, in the absence of continued exception relief, they would lack an economic incentive to produce crude oil from the wells. The DOE also found that even if the working interest owners were permitted to sell their entire share of the crude oil at upper tier ceiling prices they would still lack a sufficient incentive to continue to operate the two wells. In view of this situation and on the basis of the operating data that Tyson submitted for the most recently completed 6-month period, the DOE determined that Tyson should be permitted to sell at market prices 100 percent of the crude oil produced from the two wells for the benefit of the working interest owners.

Reading & Bates Oil & Gas Co., Tulsa, Okla., DXE-1316, Crude Oil

Reading & Bates Oil & Gas Co. (Reading & Bates) filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D. The request, if granted, would result in an extension of the exception relief previously granted to Reading & Bates and would permit the firm to continue to sell at upper tier ceiling prices a portion of the crude oil produced from the No. 2 well on the Dempsey-Mantooth lease located in McClain County, Okla. In considering the exception request, the DOE found that Reading & Bates was continuing to incur increased operating expenses in connection with the operation of the No 2A well and that in the absence of exception relief, the firm would lack an economic incentive to continue to produce crude oil from the well. On the basis of the operating data which Reading & Bates submitted for the preceding 6 months, the DOE permitted the working interest owners to sell at upper tier ceiling prices 25.73 percent of the crude oil produced from the No. 2 well for their benefit.

Suburban Propane Gas Corp., Dallas, Tex., DEE-0321, Natural Gas Liquids; Natural Gas Liquid Products

The Suburban Propane Gas Corp. (Suburban) filed an Application for Exception which, if granted, would permit Suburban to increase its maximum allowable prices for natural gas liquids and natural gas liquid products to reflect certain nonproduct cost increases which it incurred at its Martha Berry natural gas processing plant. In a Proposed Decision and Order issued to Suburban on February 27, 1978, the DOE tentatively determined that exception relief should be granted. In a Statement of Objections which it filed, Suburban objected to the determination in the Proposed Decision that it is a refiner of crude oil under the Mandatory Petroleum Price Regulations and therefore must determine the maximum lawful selling prices for products refined at its natural gas processing plants pursuant to Subpart E of those regulations. In rejecting the firm's position on this issue, the DOE found that Plateau, Inc., a wholly owned subsidiary of Suburban, is a refiner of crude oil and that Suburban, through its ownership of Plateau, controls the operations of Plateau. The DOE therefore concluded that for purposes of implementing the exception relief which is approved for the firm, Suburban is a refiner of crude oil. Consequently, Suburban was permitted to reflect certain nonproduct cost increases which it incurred at its Martha Berry natural gas processing plant in the total nonproduct costs available for recovery through the prices the firm charges for general refinery products.

Young Refining Corp., Douglasville, Ga., DXE-0084, Crude Oil

The Young Refining Corp. (Young) filed an Application for Exception from the Old Oil Entitlements Program (10 CFR 211.67). The exception request, if granted, would relieve the firm of any obligation to purchase entitlements for the period October 1977 through March 1978.

On December 20, 1977, the DOE issued a Proposed Decision and Order in which it tentatively determined that Young had substantially changed its business practices after receiving entitlement exception relief under the criteria set forth in *Delta Refining Co.*, 2 FEA Par. 83,275 (September 11, 1975). According to the Proposed Decision, Young's course of conduct adversely affected the public interest and significantly frustrated the attainment of the objectives of the Entitlements Program. In order to prevent Young from taking further unwarranted advantage of its exception relief, a ceiling was placed on the amount of prospective relief to be granted to Young The ceiling was equivalent to the level of relief that would have been granted had the firm's crude oil receipts and runs to stills been the same as in 1975 (the 1975 limitation). The DOE consequently proposed to grant exception relief in the amount of $272,134 per month for the October 1977 through March 1978 period. *Young Refining Corp.*, Proposed Decision and Order, Case No. DXE-0084 (December 20, 1977).

In its Statement of Objections to the Proposed Decision, Young contended that the DOE could not depart from the *Delta* standard without first complying with statutory rulemaking provisions. Young also maintained that the DOE could not lawfully apply the 1975 limitation to a period of time which preceded the issuance of the Proposed Decision and Order. In considering Young's contentions, the DOE noted that similar contentions were considered at length in *Lunday-Thagard Oil Co.*, 2 DOE Par.——— (June 20, 1978). For the reasons discussed in *Lunday-Thagard*, the DOE rejeted Young's contention that the DOE failed to follow appropriate procedures in departing from the *Delta* standard. On the basis of that holding and its finding that Young had abused the exception it had received in the past, the DOE concluded that the 1975 limitation should be applied.

The DOE further concluded however that equitable considerations warranted some modification in the Proposed Decision and Order since the application of the 1975 limitation to Young for the final 3 months of 1977 would cause the firm to experience a serious financial hardship which would threaten its continued economic viability. In view of that finding, the DOE concluded that some additional exception relief should be granted. Accordingly, the DOE granted Young exception relief amounting to $6,006,385.02 for the period October 1977 through March 1978.

PETITION FOR SPECIAL REDRESS

Richard E. Snyder, Rehoboth, Del., DSG-0020, Motor Gasoline

Richard E. Snyder (Snyder) filed a Petition for Special Redress which, if granted,

would have resulted in the issuance of an Order rescinding a subpeona that DOE Region III issued to Snyder on May 24, 1978. In his Petition, Snyder contended that

Mountain States Energy Corp., Englewood, Colo., DEE-1423

Copies of the full text of these Decisions and Orders are available in the Public

property. The firm contended that the definition of the term "property" employed by the FEA was arbitrary and capricious in its failure to accord to separate reservoirs rec-

Beacon Oil Co., Hanford, Calif., DXE-1031, Crude Oil.

culating exception relief set forth in *Great Southern Oil and Gas Co., Inc.*, 3 FEA Par. 83,124 (March 9, 1976). Gulf also contended that the "input method" failed to take into consideration all of the firm's legitimate op-

Mountain West Aviation, Aspen, Colo., DEE-0489, aviation fuels

Mountain West Aviation (Mountain West) filed an Application for Exception from the provisions of 10 CFR 212.93. The exception

V 4 3 1 2 0 3 0 OCT 19 78

would have resulted in the issuance of an Order rescinding a subpoena that DOE Region III issued to Snyder on May 24, 1978. In his Petition, Snyder contended that the subpoena should be quashed on the grounds that the subpoena was not personally served upon him; that it did not provide him with sufficient time in which to retain counsel and locate records which were requested by the subpoena; that a number of the records requested by the subpoena no longer existed; and that he was not sufficiently informed of the subpoena's purpose. In considering Snyder's Petition, the DOE found that the subpoena had been delivered at Snyder's residence to a "person of suitable age and discretion" and that this constituted valid service under the provisions of § 205.8(d). The DOE also found that since Snyder knew of the subpoena's requirements 7 days before the appearance date specified in the subpoena, he had had sufficient time in which to retain counsel and locate the records. In addition, the DOE found that Snyder's allegation that certain records did not exist did not excuse his refusal to appear with the records which were available. Finally, the DOE held that the subpoena's citation of the DOE's regulatory authority to initiate investigations and ascertain compliance with DOE Regulations and its specific reference to Snyder's motor gasoline operations at the Red Baron Gas Station were sufficient to inform Snyder of the nature of the DOE investigation. Accordingly, the Snyder Petition for Special Redress was denied.

REQUEST FOR STAY

Whitco, Inc., Dallas, Tex., DES-0091, Motor Gasoline

Whitco, Inc. (Whitco) filed an Application for Stay of the provisions of 10 CFR 211.25 (the supplier substitute rule). If the Whitco request were approved, the Sun Oil Co. (Sun) would be required to continue furnishing Whitco with its base period use of motor gasoline directly, rather than through Amtel, Inc., Sun's designated substitute supplier, pending a determination with respect to Whitco's Application for Exception from Section 211.25. In considering Whitco's Application for Stay, the DOE concluded that in view of the fact that the DOE on a number of previous occasions had granted Whitco the type of exception relief which it was requesting, it was very likely that the firm would prevail on the merits of its current Application for Exception. Furthermore, the DOE concluded that Whitco would incur a more immediate serious hardship and gross inequity than any other firm involved in the proceeding if the supplier substitution rule were not stayed pending a final determination with regard to its pending exception request. Accordingly, the Whitco Application for Stay was granted.

DISMISSALS

The following submission was dismissed following a statement by the applicant indicating that the relief requested was no longer needed:

Capitol Oil Co., Alexandria, Va., DRA-0148.

The following submission was dismissed on the grounds that the request is now moot.

Mountain States Energy Corp., Englewood, Colo., DEE-1423

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B-120, 2000 M Street NW., Washington, D.C. 20461, Monday through Friday, between the hours of 1 p.m. and 5 p.m., e.d.t., except Federal holidays. They are also available in Energy Management: Federal Energy Guidelines, a commercially published loose leaf reporter system.

October 12, 1978.

ISSUANCE OF DECISIONS AND ORDERS

Week of July 31 through August 4, 1978

Notice is hereby given that during the week of July 31 through August 4, 1978, the Decisions and Orders summarized below were issued with respect to Appeals and Applications for Exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions which were dismissed by the Office of Hearings and Appeals and the basis for the dismissal.

APPEAL

Klotzman, Melvin & Pendleton, Jess d.b.a. Victoria Equipment, & Supply Co., Victoria, Tex., FRA-1425, Crude Oil

Melvin Klotzman & Pendleton d.b.a. Victoria Equipment & Supply Co. (Victoria) appealed a Remedial Order that was issued by the Enforcement Division of Region VI. In the Remedial Order the Regional Office found that Victoria had improperly classified the Keeran Ranch "D" Lease as a stripper well property and had consequently overcharged the purchaser of the crude oil produced on the property. In its Appeal, Victoria contended that various provisions of the stripper well lease exemption contained in § 210.32 of the DOE Regulations were arbitrary and capricious and in excess of the agency's statutory authority. In considering the Appeal, the DOE observed that § 210.32 which established the qualifying period for the stripper exemption as "the preceding calendar year" was identical to section 4(e)(2)(A) of the Emergency Petroleum Act of 1973 (EPAA), which authorized of the exemption. It was therefore determined that the regulatory provision was within the scope of the agency's statutory authority. The DOE further held Congress did not intend that retroactive effect be given to section 121 of the Energy Conservation and Production Act, which Amended the qualifying period specified in the EPAA. In addition the DOE held that Ruling 1975-12 did not constitute a retroactive rulemaking.

Victoria also argued that in qualifying for the stripper well lease exemption it should have been permitted to treat production from each separate and distinct reservoir on the Lease as production from a separate property. The firm contended that the definition of the term "property" employed by the FEA was arbitrary and capricious in its failure to accord to separate reservoirs recognition as properties. The DOE found, however, that valid policy reasons existed for the property definition adopted by the FEA, and it also observed that the same definition was apparently contemplated by the Congress in drafting the EPAA. Finally, the DOE concluded that the subsequent decision of the FEA to amend the property definition without making the amendment retroactive was reasonable. The Victoria Appeal was therefore denied.

REQUESTS FOR EXCEPTION

Bayou State Oil Corp., Shreveport, La. FEE-4264, Refined Petroleum Products

Bayou State Oil Corp. (Bayou State) filed an Application for Exception which, if granted, would permit the firm to calculate its maximum allowable prices for refined petroleum products by allocating the increased costs of crude oil which it incurred during the period March 1975 through August 1976 on the basis of its actual refined product sales volumes, excluding the volumes of gasoline blended and sold by its affiliate, Ida Gasoline Co., Inc. (Ida). On November 22, 1977 the DOE issued a Proposed Decision and Order which tentatively determined that the exception should be denied. The DOE noted in the Proposed Decision that the Mandatory Petroleum Price Regulations have always required refiners to consolidate all of their operations for purposes of determining their maximum allowable prices. The DOE found that Bayou State was not entitled to retroactive exception relief on the basis of its contentions that it was unaware of this firmwide requirement and that its failure to treat Bayou State and Ida as a single firm resulted form a good faith interpretation of the regulations. The DOE further found that Bayou State was not entitled to an exception on the basis of standards established in prior cases where firms were granted exception relief permitting them to exclude products purchased for resale in allocating their crude oil costs. The DOE also found that the mere fact that Bayou State was required to allocate some of its increased costs of crude oil to a product which it did not refine from crude oil did not distinguish the firm from many other refiners and did not constitute a gross inequity. Finally, the DOE determined that in the event Bayou State were required to refund the overcharges involved the firm would not experience such a severe financial hardship as to threaten its viability or preclude it from continuing its essential operations. Bayou State filed a Statement of Objections to the Proposed Decision and Order on December 23, 1977. In considering the Statement of Objections, the DOE found that Bayou State's alleged good faith did not form a basis for relief and that Bayou State did not meet the standards for relief established in previous cases. The DOE also found that the Proposed Decision correctly considered all petroleum-related activities of the Bayou State firm in assessing the impact of any potential refund obligation. Accordingly, a final Decision and Order was issued which denied the Bayou State Application for Exception.

Beacon Oil Co., Hanford, Calif., DXE-1031, Crude Oil.

Beacon Oil Co. (Beacon) filed an Application for Exception from the provisions of 10 CFR 211.67 (the Entitlements Program) which, if granted, would relieve the firm of its obligation to purchase entitlements for the months of June through November 1978 to account for its crude oil receipts and runs to stills during the months of April through September 1978. In support of its Application, Beacon submitted projected financial and operating material for its current fiscal year ending December 31, 1978. Based on the Beacon submission, the DOE determined that Beacon would incur an obligation to purchase entitlements during its current fiscal year which would prevent it from achieving either its historical profit margin or historical return on invested capital (ROIC). The DOE concluded therefore that exception relief was warranted under the criteria set forth in *Delta Refining Co.*, 2 FEA Par. 83,275 (September 11, 1975) and *Beacon Oil Co.*, 3 FEA Par. 83,209 (June 8, 1976). In determining the amount of exception relief which should be granted, the DOE found that Beacon's projections indicated that even if the firm were relieved of its entire entitlement purchase obligation for the current fiscal year it would still not attain either its historical profit margin or ROIC. Accordingly, in a Proposed Decision and Order issued to the firm on June 22, 1978, the DOE tentatively granted Beacon an exception which relieved it of any obligation to purchase entitlements during the six month period June through November 1978. Since no objection to the proposed determination was filed within the time period specified in the DOE regulations, the Decision and Order was issued to Beacon in final form. The Decision notes that reviews will be conducted of the entitlements exception relief which Beacon was granted and the firm will be required to purchase entitlements if a determination is made that it received excessive benefits.

Gulf Oil Corp., Tulsa, Okla., DXE-0251, Crude Oil

The Gulf Oil Corp. (Gulf) filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D. The request, if granted, would result in an extension of the exception relief previously granted to the firm and would permit Gulf to sell the crude oil produced from the Northwest Graylin "D" Sand Unit (the Graylin Unit) at upper tier ceiling prices. *See Gulf Oil Corp.*, 6 FEA Par. 83,028 (July 8, 1977); *aff'd*, 1 DOE Par. 80,217 (March 14, 1978). On January 23, 1978 a Proposed Decision and Order was issued to Gulf in which the DOE tentatatively concluded that Gulf should be permitted to sell at upper tier ceiling prices 67.66 percent of the crude oil produced from the Graylin Unit for the benefit of the working interest owners for a six month period of time. On March 10, 1978 Gulf filed a Statement of Objections to the Proposed Decision. In both the previous exception decision and the January 23, 1978 Proposed determination, the DOE utilized an "input method" to calculate the firm's current level of administrative overhead cost for purposes of determining the firm's actual level of total increased operating costs since May 15, 1973. Gulf objected to the DOE's use of the "input method," and claimed that there was no legal basis for this deviation from the methodology for calculating exception relief set forth in *Great Southern Oil and Gas Co., Inc.*, 3 FEA Par. 83,124 (March 9, 1976). Gulf also contended that the "input method" failed to take into consideration all of the firm's legitimate operating expenses. After reviewing Gulf's contentions, the DOE agreed with the firm's assertion that the "input method" does not provide an accurate measure of a crude oil producer's actual operating costs. However, the DOE also determined that it would not be appropriate to permit Gulf to include all of its reported administrative overhead expenses since a portion of the firm's higher-level administrative costs are not allocated to the other working interest owners and have no bearing on the working interest owners' present incentive to continue their production activities at the Graylin Unit. Consequently, the DOE determined that only those administrative overhead expenses which are borne by all of the working interest owners of the Graylin Unit should be included by the DOE for purposes of calculating exception relief under the *Great Southern* line of cases. Accordingly, the DOE recalculated the allowable level of exception relief for the Graylin Unit by excluding those administrative overhead expenses which were borne solely by Gulf. The DOE determined that Gulf should be permitted to sell at upper tier ceiling prices 63.04 percent of the crude oil produced from the Graylin Unit for the benefit of the working interest owners during the period January 1, 1978 through June 30, 1978.

Maguire Oil Co., Dallas, Tex., FEE-4464, Crude Oil

On February 8, 1978, the Maguire Oil Co. (Maguire) filed a Statement of Objections to a Proposed Decision and Order which was issued to it on December 16, 1977. In the Proposed Decision, the DOE tentatively determined that the firm should be granted a prospective exception from the provisions of 10 CFR 212.73 to permit the working interest owners of the Chandler Lease to sell a portion of the crude oil produced for their benefit at upper tier ceiling prices. However, the Proposed Decision denied Maguire's request that the exception be made retroactive to January 1, 1975. In its Statement of Objections, Maguire contended that it had demonstrated compelling reasons why a retroactive exception should be granted. The DOE noted that this contention was apparently based on Maguire's position that it had demonstrated a reasonable basis for the crude oil pricing practices which the firm followed during the period January 1, 1976 through September 30, 1976. In rejecting this argument, the DOE determined that the reasonableness of Maguire's pricing during this period had been fully considered in a related Appeal from a Remedial Order which Maguire had previously filed. *Maguire Oil Co.*, 1 DOE Par. 80,184 (January 20, 1978). In view of the fact that the DOE had already issued a final determination with respect to the reasonableness of Maguire's prior pricing practices, the DOE determined that no purpose would be served by further consideration of this issue. Maguire also contended that the level of prospective exception relief afforded by the Proposed Decision was insufficient to provide the working interest owners of the Chandler Lease, with an economic incentive to continue their production activities.

Mountain West Aviation, Aspen, Colo., DEE-0489, aviation fuels

Mountain West Aviation (Mountain West) filed an Application for Exception from the provisions of 10 CFR 212.93. The exception request, if granted, would permit Mountain West to increase its selling prices for aviation fuels by 5.8 cents per gallon. In considering this request the DOE determined that Mountain West is presently incurring nonproduct costs which substantially exceed the four cents per gallon which fixed base operators are permitted to reflect in their selling prices for aviation fuels. The DOE also found that Mountain West's present operating financial condition would be seriously affected if it were required to absorb these non-product costs on a continuing basis. Therefore, based upon previous DOE decisions involving similar factual circumstances, the DOE concluded that exception relief was warranted to permit Mountain West to increase its selling prices for aviation fuels by 5.8 cents per gallon.

Southland Oil Co./VGS Corp., Jackson, Miss., DXE-1071, crude oil

Southland Oil Co./VGS Corp. filed an Application for Exception from the provisions of 10 CFR 211.67 (the Entitlements Program) which, if granted, would relieve the firm of its obligation to purchase entitlements for the months of June through November 1978 to account for its crude oil receipts and runs to stills during the months of April through September 1978. In support of its Application, Southland submitted projected financial and operating material for its current fiscal year ending December 31, 1978. Based on the Southland submission, the DOE determined that Southland would incur an obligation to purchase entitlements during its current fiscal year which would prevent it from achieving either its historical profit margin or historical return on invested capital (ROIC). The DOE concluded therefore that exception relief was warranted under the criteria set forth in *Delta Refining Co.*, 2 FEA Par. 83,275 (September 11, 1975) and *Beacon Oil Co.*, 3 FEA Par. 83,209 (June 8, 1976). Accordingly, on June 22, 1978, the DOE issued a Proposed Decision and Order to Southland which expressed the preliminary determination that Southland should be granted an exception relieving it of a portion of its obligation to purchase entitlements during the six month period June through November 1978. Since no objection to the proposed determination was filed within the time period specified in the DOE regulations, the Decision and Order was issued to Southland in final form. The Decision notes that reviews will be conducted of the entitlements exception relief which Southland was granted and the firm will be required to purchase entitlements if a determination is made that it received excessive benefits.

Terry Oil Co., Commerce Calif., DEE-0901, crude oil

Terry Oil Co. (Terry) filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D, which, if granted, would permit the firm to sell the crude oil which it would produce from the East Los Angeles Field at prices in excess of the ceiling price level. In considering the exception request, the DOE determined that a considerable capital investment would be necessary to restore the East Los Angeles Field to full production. The DOE further

V 4 3 / 2 0 3 0 C 1 9 7 8

determined that the production and operating expense estimates submitted by the firm indicated that the required capital investment would be uneconomic if the crude oil produced from the property had to be sold at the applicable ceiling prices. In addition, the DOE determined that a substantial quantity of crude oil would not be recovered if Terry did not undertake the capital investment program. On the basis of these findings the DOE determined that exception relief should be granted to Terry which would provide the firm with a sufficient economic incentive to undertake the capital investment program. Accordingly, Terry was permitted to sell during the economic life of the project a sufficient portion of the crude oil to be produced as a result of the investment at prices in excess of the ceiling price levels in order to permit the working interest to attain a 15-percent return on their investment at the East Los Angeles Field.

V & J Service, Coal Valley, Ill., DRC-0004, motor gasoline

V & J Service filed an Application for Exception from the provisions of 10 CFR 211.12 which, if granted, would substantially increase the firm's base period use of motor gasoline. In considering the firm's application, the DOE determined that V & J had failed to satisfy the criteria for approving an exception request for an increase in base period use. The DOE found that V & J had been able to secure supplies of surplus product which are sufficient to satisfy the needs of the Coal Valley community. On the basis of these considerations, the DOE determined that V & J's exception request should be denied.

Wilson-Owens Production Co., Longview, Tex., DEE-1025, crude oil

The Wilson-Owens Production Co. filed an application for exception from the provisions of 10 CFR, Part 212, Subpart D, which, if granted, would permit it to sell the crude oil produced from W. T. Blackwell Unit lease, located in Wood County, Tex., at upper tier ceiling prices. In considering the exception request, the DOE found that Wilson-Owens' operating costs had increased to the point where the firm no longer had an economic incentive to continue production of crude oil from the Blackwell lease if the crude oil was to be sold at lower tier ceiling prices. The DOE also determined that if Wilson-Owens abandoned its operation at the Blackwell lease, a substantial quantity of crude oil would not be recovered. The DOE therefore concluded that the Wilson-Owens Application should be granted and the working interest owners should be permitted to recover their unrecovered increased operating expenses at the Blackwell lease. On the basis of the criteria applied in previous decisions under similar circumstances, Wilson-Owens was permitted to sell at upper tier ceiling prices 44.30 percent of the crude oil produced from the Blackwell lease for the benefit of the working interest owners.

REQUEST FOR STAY

United Petroleum, Inc., Tampa, Fla., DES-0090, refined petroleum products

United Petroleum, Inc. filed an application for stay in which it requested that an enforcement proceeding involving the firm be held in abeyance pending a final determination on a request for information which the firm filed with the DOE pursuant to the Freedom of Information Act, 5 U.S.C. 552. In support of its application, United claimed that the information which it requested is indispensible in preparing a complete statement of objections to a proposed remedial order which was issued to the firm in the enforcement proceeding. In considering the stay request, the DOE observed that the disclosure provisions of the Freedom of Information Act are not a substitute for discovery, and enforcement proceedings generally will not be stayed pending disclosure of information pursuant to the FOIA if other administrative procedures are available by which a firm may obtain relevant and material evidence. The DOE found that procedures providing for discovery are available to the firm in the context of the enforcement proceeding and that the firm has not availed itself of those procedures. The United stay request was therefore denied.

DISMISSALS

The following submission was dismissed following a statement by the applicant indicating that the relief requested was no longer needed:

Quest Oil Co., Denver, Colo., DEE-0074

The following submission was dismissed after a determination made by the DOE that the relief requested was no longer necessary.

Charles W. Austin, Billings, Mont., DRA-0062

Copies of the full text of these decisions and orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B-120, 2000 M Street NW., Washington, D.C. 20461, Monday through Friday, between the hours of 1 p.m. and 5 p.m., e.d.t., except Federal holidays. They are also available in Energy Management: Federal Energy Guidelines, a commercially published looseleaf reporter system.

MELVIN GOLDSTEIN,
Director,
Office of Hearings and Appeals.

OCTOBER 12, 1978.

[3128-01-M]

ISSUANCE OF DECISIONS AND ORDERS

Week of August 7 Through August 11, 1978

Notice is hereby given that during the week of August 7 through August 11, 1978, the Decisions and Orders summarized below were issued with respect to Appeals and Applications for Exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions which were dismissed by the Office of Hearings and Appeals and the basis for the dismissal.

APPEAL

Harvey W. Jones and Associates, Natchez, Miss., DRA-0081, Crude Oil

Harvey W. Jones and Associates filed an Appeal from a Remedial Order issued to it by DOE Region IV on November 29, 1977. The Remedial Order found that Jones had improperly classified five properties as stripper well leases and had sold the crude oil produced from them at prices which exceeded the maximum permissible selling prices. In its Appeal, Jones contended that Region IV had erroneously determined the downtime of the five properties and, as a result, had miscalculated their average daily production. In considering the Appeal, the DOE determined that a factual issue existed as to how much normal downtime show should be attributed to the wells. The DOE further determined that *Tenneco Oil Co.*, 1 DOE Par. 82,512 (November 15, 1977), and *Bonray Oil Co.*, 6 FEA Par. 80,521 (July 26, 1977), did not preclude consideration of documentation regarding downtime which Jones had presented for the first time on Appeal, since the notices of Probable Violation which preceded the Remedial Order had not adequately notified Jones of the basis for the alleged violation. Consequently, the DOE remanded the Remedial Order to DOE Region IV for consideration of the additional material and further findings of fact.

REMEDIAL ORDER

Pawnee Petroleum Co., Seminole, Okla. DRO-0018, Crude Oil

Pawnee Petroleum Co., objected to a Proposed Remedial Order which DOE Region VI issued to the firm on March 14, 1978. In the Proposed Remedial Order, Region VI found that Pawnee had improperly classified four leases as stripper well properties and had sold the crude oil produced from them at prices which were in excess of the maximum permissible selling prices. Region VI also found that Pawnee had sold crude oil produced from seven leases at prices above the applicable ceiling prices set forth in 6 CFR 150.354 and 10 CFR 212.73. In its Statement of Objections, Pawnee contended that Ruling 1975-12 was improperly issued by the FEA and should not be used to calculate the average daily production of the firm's properties. In considering Pawnee's objections, the DOE noted that it had previously rejected contentions that Ruling 1975-12 was defective. *Ruthven, Inc.*, 1 DOE Par. 80,243 (April 19, 1978); *Pioneer Operations Company, Inc.*, 1 DOE Par. 80,230 (March 24, 1978). In those cases, the DOE found that the distinction contained in Ruling 1975-12 between wells that produce crude oil from independent formations through multiple tubing strings and wells that produce through a single tubing string was not arbitrary and capricious. The DOE also found that Ruling 1975-12 was interpretative and could therefore be applied retroactively. The DOE further determined that Region VI had correctly found that Pawnee improperly included as part of its May 15, 1973, posted price a premium which the firm's purchaser paid to secure a long-term supply contract. On the basis of these findings, the DOE rejected Pawnee's objections and issued the March 14 Proposed Remedial Order as a final Remedial Order.

REQUESTS FOR EXCEPTION

Crystal Oil Co., Shreveport, La. FPI-0128, Oil Imports

Crystal Oil Co., filed an Application for Exception which, if granted, would increase the amount of crude and unfinished oils which the firm is permitted to import on a license fee-exempt base under the provisions of 10 CFR, Part 213. In its Application, Crystal maintained that the DOE Office of Oil Imports had improperly excluded the licenses attributable to the operation of the Adobe refinery located in La Blanca, Tex., in calculating Crystal's fee-exempt authority for the 1977 allocation period. In considering Crystal's exception request, the DOE found that the Office of Regulatory Programs had determined that Crystal owned, operated and controlled the Adobe refinery for purposes of the Entitlements Program. The DOE concluded that Crystal would experience a gross inequity if it were not also considered the refiner of the Adobe facility for the purposes of the Oil Imports Program. The Application for Exception was accordingly granted.

Mohawk Petroleum Corp., Inc., Los Angeles, Calif., DXE-1030, Crude Oil

Mohawk Petroleum Corp., Inc., filed an Application for Exception from the provisions of 10 CFR 211.67 (the Entitlements Program) which, if granted, would relieve the firm of its obligations to purchase entitlements for the period June through November 1978. In considering the Mohawk request, the DOE determined that in the absence of exception relief the firm would incur entitlement obligations during its current fiscal year which would prevent it from achieving either its historical profit margin or historical return on invested capital. The DOE concluded that exception relief was therefore warranted under the criteria set forth in *Beacon Oil Co.*, 3 FEA Par. 83,209 (June 8, 1978), and *Delta Refining Co.*, 2 FEA Par. 83,275 (September 11, 1975). The Application for Exception was accordingly granted.

Monsanto Co., Houston, Tex., DXE-1329, Crude Oil

Monsanto Co. filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D, which, if granted, would result in the extension of exception relief previously approved and would permit Monsanto to continue to sell certain quantities of the crude oil produced from the Hendrick "A" property, located in the Hendrick Field in Winkler County, Tex., at upper tier ceiling prices. In considering the Monsanto exception request, the DOE found that operating costs per barrel at the property continued to exceed the applicable lower tier ceiling price and that continued exception relief was therefore necessary to provide the firm with an adequate economic incentive to maintain production operations. In accordance with the methodology established in previous Decisions, the DOE permitted Monsanto to sell 60.66 percent of the crude oil produced from the property at upper tier ceiling prices for a 6-month period.

O'Meara Brothers, New Orleans, La., DXE-1116, DXE-1117, Crude Oil

O'Meara Brothers filed two Applications for Exception from the provisions of 10 CFR, Part 212, Subpart D, which, if granted, would result in the extension of exception relief previously approved and would permit O'Meara to continue to sell a portion of the crude oil produced from the Vinton and Louisiana State Leases at upper tier ceiling prices. *O'Meara Brothers*, 1 DOE Par. 81,089 (January 24, 1978). In considering the exception request for the Vinton Lease, the DOE found that as a result of a substantial reduction in repair and workover expenses for the property, O'Meara would be able to operate the lease on a profitable basis even if the crude oil is sold at the applicable lower tier price. Accordingly, the DOE determined that exception relief should not be extended for the Vinton Lease. With respect to the Louisiana State Lease, the DOE found that the level of operating costs had continued to increase and that, in the absence of exception relief, O'Meara would have no economic incentive to maintain crude oil production from the property. In view of this determination and on the basis of the operating data which the firm submitted for the two most recently completed fiscal quarters, O'Meara was permitted to sell at upper tier ceiling prices 100 percent of the crude oil produced from the Louisiana State Lease for the benefit of the working interest owners for a 6-month period.

Pennzoil Producing Co., Houston, Tex., DEE-0086, Crude Oil

Pennzoil Producing Co. filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D, which, if granted, would permit the firm to sell the crude oil produced from the Woodruff Sand Unit located in the Tinsley Field, Yazoo County, Miss., at market prices. In considering Pennzoil's Application, the DOE determined that the costs of producing crude oil from the Woodruff Sand Unit had increased significantly since 1973 and that those costs per barrel now exceed the prices which Pennzoil is permitted to charge. Consequently, the DOE determined that Pennzoil does not have an economic incentive to continue production from the Unit. The DOE also found that if the Unit were abandoned, a significant quantity of otherwise recoverable domestic crude oil would not be produced. On the basis of these findings and in accordance with the methodology established in previous Decisions, the DOE permitted Pennzoil to sell 100 percent of the crude oil produced from the Woodruff Sand Unit for the benefit of the working interest owners at market prices not to exceed $14.09 per barrel through the end of the calendar year.

REQUEST FOR MODIFICATION OR RESCISSION

Damson Oil Corp., Los Angeles, Calif., DMR-0029, Crude Oil

Damson Oil Corp. filed an Application for Modification of a Decision and Order which the DOE issued to the firm on July 5, 1978. *Damson Oil Corp.*, 1 DOE Par. ----- (July 5, 1978). In that Decision, the DOE granted Damson exception relief from the provisions of 10 CFR 212.73 for the period September 1, 1977, through August 31, 1978. In its Application, Damson indicated that the period of relief was inconsistent with a previous Decision and Order granting similar relief for the period March 1 through August 31, 1978. *Damson Oil Corp.*, 1 DOE Par. 81,101 (April 7, 1978). In order to alleviate the overlap in relief periods, the DOE concluded that the July 5 Decision should be modified to grant exception relief for the period September 1, 1977, through February 28, 1978.

REQUESTS FOR STAY

DeMartin Truck Lines, Inc., Bakersfield, Calif., DRS-0198, Propane, Butane

DeMartin Truck Lines, Inc. requested that a Revised Remedial Order which was issued to the firm by the Office of Enforcement on June 29, 1978 be stayed pending determination of an Appeal from the Order and an Application of Exception which the firm file. The Stay was also requested pending resolution of an action filed in the United States District Court for the Eastern District of California. In the Revised Remedial Order, the DOE found that DeMartin had charged prices for propane and butane which exceeded the maximum permissible prices and directed the firm to make appropriate refunds. In considering the stay request, the DOE referred to a Decision in *Rickelson Oil and Gas Co.*, 6 FEA Par. 85,029 (August 24, 1977), in which the FEA held that a Remedial Order will generally be stayed pending the determination of an Appeal unless it appears that the public interest requires immediate compliance. Since the record in the present case did not indicate that the public interest required immediately compliance, the DOE granted a stay pending consideration of the firm's Appeal and Application for Exception. However, the DOE rejected DeMartin's request that the stay be granted pending judicial review.

Mid-America Refining Co., Inc., Washington, D.C., DES-1421, Crude Oil

Mid-America Refining Co., Inc., requested that its obligations under the provisions of 10 CFR 211.67 (the Entitlements Program) be stayed during the month of July 1978, pending a determination on an Application for Exception which the firm filed. In considering the request, the DOE found that Mid-America had recently altered its operations in order to become a purchaser of entitlements. The DOE determined that since Mid-America's obligation to purchase entitlements in July 1978 was directly attributable to the firm's own discretionary actions, stay relief was not warranted. Accordingly, Mid-America's Application for Stay was denied.

Piedmont Natural Gas Co., Spartanburg, S.C. DES-0093, DST-0093, Propane

Piedmont Natural Gas Co. filed an Application for Stay and an Application for Temporary Stay, which, if granted, would permit Piedmont to acquire and use surplus supplies of domestic propane for the purpose of stabilizing the BTU value of natural gas distributed in South Carolina after August 31, 1978. The stays were sought pending the final determination of a petition for similar relief which Piedmont had filed with the DOE Economic Regulatory Administration (ERA). In considering the stay requests, the DOE found that there was no basis to conclude that ERA would be unable to render a final determination with respect to Piedmont's petition prior to September 1, 1978. In this regard, the DOE noted that if a favorable determination were issued by September, Piedmont could use its inventory supplies of propane for BTU stabilization and, as a result, the firm would not immediately have to purchase additional volumes of propane. The DOE also found that the Piedmont stay submissions had failed to adequately address whether the need for expeditious action resulted from the firm's delay in filing its petition

V 43 / 203 OCT 19 78

and whether it could utilize alternative methods of BTU stabilization prior to the issuance of a decision by ERA. On the basis of these considerations, the stay applications were denied.

SUPPLEMENTAL ORDERS

Quincy Oil, Inc., Quincy, Mass.; Taunton Municipal Lighting Plant, Taunton, Mass., DEX-0102, Fuel Oil

On May 24, 1978, the Taunton Municipal Lighting Plant filed a Statement of Objections to a Proposed Decision and Order that the DOE issued to Quincy Oil, Inc. on March 17, 1978. In the Proposed Decision and Order, the DOE determined that Quincy's Application for Exception from the pricing regulations should be granted in part. In its objection to that determination, Taunton requested that it be given an opportunity to examine certain confidential information submitted by Quincy in connection with its Application for Exception. The parties subsequently agreed to the disclosure of the information under a Protective Order and Joint Agreement for Discovery, subject to the approval of the DOE. Under the terms of the Protective Order, Taunton may not use the information that it receives except in connection with the pending administrative proceedings and any subsequent judicial review. In reviewing the agreement reached by the parties, the DOE noted that discovery would facilitate its consideration of the exception proceedings. The DOE therefore concluded that the Protective Order and Joint Agreement for Discovery should be approved. The DOE pointed out that the Protective Order was an order within the meaning of Section 5(a)(3) of the Emergency Petroleum Allocation Act of 1973, as amended, and that a violation would give rise to potential civil and criminal penalties. In addition, the DOE determined that it could impose other sanctions on any party that violates the terms of the Protective Order, including the dismissal of its submission.

Young Refining Corp., Douglasville, Ga., DEX-0099, crude oil

On July 24, 1978, the DOE issued a Decision and Order to Young Refining Corp. *Young Refining Corp.*, 1 DOE Par. — (July 24, 1978). In that Decision, the DOE granted exception relief which relieved Young of entitlement purchase obligations in the amount of $6,006,385 for the period October 1977 through March 1978. As a result of a calculation error, Young's outstanding entitlement purchase obligations for the relief period were understated in Appendix A of the Decision. Accordingly, the DOE modified the July 24 Decision to reflect the corrected figures.

MOTION FOR EVIDENTIARY HEARING

Deltona Corp., Miami, Fla., DEH-0023, LP Gas

The Deltona Corp. filed a Motion for Evidentiary Hearing in connection with its Statement of Objections to a Proposed Decision and Order which was issued to the firm by DOE Region IV on May 18, 1978. In the Proposed Decision and Order, Region IV determined that Deltona's request for exception relief to increase its sales prices for liquified petroleum gas should be denied. In its Motion, Deltona stated that it could support its claim that it was experiencing a gross inequity and serious hardship only through the testimony of corporate officers and outside consultants. In addition, the firm stated that the testimony of those witnesses was necessary to show that the firm was prevented from raising its prices due to a general price freeze in effect after May 15, 1973. In considering Deltona's Motion, the DOE found that the firm had failed to set forth the specific facts it intended to establish through the proposed witnesses' testimony. Furthermore, the DOE determined that technical financial material is generally best presented through written submissions rather than oral testimony. Finally, the DOE concluded that Deltona had failed to demonstrate the relevance of the post-May 15, 1973, price freeze to the issues in its exception request. Accordingly, the Motion for Evidentiary Hearing was denied.

MOTION FOR DISCOVERY

Consumers Power Co., Marysville, Mich., DED-0180, Natural Gas Liquids

Consumer Power Co. filed a Motion for Discovery in connection with an Appeal of an Assignment Order which was issued to it by the DOE Economic Regulatory Administration (ERA). In its Motion, Consumers requested that ERA be directed to respond to four interrogatories. In considering Consumers' request, the DOE noted that the DOE procedural regulations do not provide for discovery in a proceeding that does not involve an enforcement action. The DOE observed, however, that it is within its inherent discretion to permit discovery when appropriate. The DOE determined that the information sought by Consumers was relevant and material to issues raised in its appeal. The DOE also found that ERA staff members could obtain the requested information more easily than Consumers and that discovery would not unduly delay the appeal proceeding. Accordingly, the Motion for Discovery was granted.

REQUESTS FOR EXCEPTION RECEIVED FROM NATURAL GAS PROCESSORS

The Office of Hearings and Appeals of the Department of Energy has issued decisions and orders granting exception relief from the provisions of 10 CFR 212.165 to the natural gas processors listed below. The exception relief permits the firms involved to increase the prices of the production of the gas plants listed below to reflect certain nonproduct cost increases.

Company	Case No.	Plant	Location	Amount of price increase (per gallon)
Adobe Oil & Gas Corp	DXE-1149	Adobe Sale Ranch	Martin, Tex	$0.01229
Allied Chemical Corp	DXE-1150	Perkins	Coke, Tex	.01793

DISMISSALS

The following submission was dismissed following a statement by the applicant that the relief requested was no longer needed:

Bethel Park Gas & Wash, Inc., Bethel Park, Pa., DEE-0970

The following submission was dismissed for failure to correct deficiencies in the firm's filing as required by the DOE Procedural Regulations:

W. E. Allford, Inc., McAlester, Okla., DEE-0937

The following Motions for Evidentiary Hearing were dismissed on the grounds that the applicants had failed to demonstrate why the issues could not be presented by a common counsel:

Gibbs Oil Co., DRH-0016

Mid-Valley Petroleum Corp., DRH-0017

Supreme Petroleum Co. of New Jersey, Washington, D.C., DRH-0021

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B-120, 2000 M Street NW., Washington, D.C. 20461, Monday through Friday, between the hours of 1 p.m. and 5 p.m., e.d.t., except Federal holidays. They are also available in "Energy Management: Federal Energy Guidelines," a commercially published loose leaf reporter system.

Dated: October 12, 1978.

MELVIN GOLDSTEIN,
Director, Office of Hearings and Appeals.

ISSUANCE OF DECISIONS AND ORDERS

Week of August 14 Through August 18, 1978

Notice is hereby given that during the week of August 14 through August 18, 1978, the Decisions and Orders summarized below were issued with respect to Appeals and Applications for Exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions which were dismissed by the Office of Hearings and Appeals and the basis for the dismissal.

APPEALS

Kirkwood Oil & Gas Co., Casper, Wyo., FRA-1458, Crude Oil

Kirkwood Oil & Gas Co. appealed from a Remedial Order which was issued to it by FEA Region VIII on July 29, 1977. In the Remedial Order, the FEA found that as a result of improperly classifying certain leases as stripper well properties, Kirkwood sold crude oil at unlawful price levels during the period December 1973 through April 1976. Kirkwood was therefore directed to refund the overcharges which it received plus interest to its customers. In its appeal, Kirkwood contended that the FEA had exceeded its authority under the Emergency Petroleum Allocation Act of 1973 (EPAA) by promulgating regulations and rulings which require a crude oil producer to exclude periods of production downtime in calculating average daily production from a property for purposes of determining whether that property qualifies for the stripper well exemption. In addition, Kirkwood contended that the FEA did not have the authority to require interest payments on the overcharges specified in the Remedial Order. In considering the appeal, the DOE rejected these contentions on the basis of the holdings reached in *Read and Stevens, Inc.*, 6 FEA Par. 80,526 (July 25, 1977). Kirkwood also alleged that the Remedial Order erred in calculating the historical downtime for two of the properties involved. With respect to this argument, the DOE noted that the crude oil production data submitted by Kirkwood itself failed to demonstrate that the historical downtime calculated in the Remedial Order was incorrect. However, the DOE determined that the Remedial Order did not contain sufficient findings of fact to establish a rational basis for the conclusion that Kirkwood had failed to recoup the crude oil production lost as a result of downtime at two of the properties. Since a finding that the lost production had in fact been recouped could lead to the con-

clusion that those properties qualified as stripper wells, the Remedial Order was remanded to DOE Region VIII for further findings of fact. The Appeal was therefore Order pending a final determination by the Temporary Emergency Court of Appeals in *Phillips Petroleum Company, et al.* v. *Department of Energy*. Accordingly, the Tenafter the preliminary determination had been issued, the agency's Economic Regulatory Administration (ERA)

likely to rise above its base period use. The DOE therefore issued a Proposed Decision and Order in which it was tentatively determined that GTE-Sylvania's Application for the Western exception request, the DOE concluded that the firm's inability to obtain domestic product is primarily the result of the operation of the free market and not Staley may incure in complying with the Special Report Order resulted from the firm's own failure to comply with DOE recordkeeping requirements. The DOE also

V 4 3 1 2 0 3 0 C 1 9 7 8

clusion that those properties qualified as stripper wells, the Remedial Order was remanded to DOE Region VIII for further findings of fact. The Appeal was therefore denied in part and granted in part.

Natural Resources Defense Council, Palo Alto, Calif., DFA-0199, Freedom of Information

The Natural Resources Defense Council (NRDC) appealed from a denial by the DOE Acting Director, Office of NEPA Affairs of a Request for Information submitted under the Freedom of Information Act. In its request, NRDC sought the disclosure of documents relating to the draft of an Environmental Impact Statement prepared by the Bonneville Power Administration entitled "The Role of the Bonneville Power Administration in the Pacific Northwest Power Supply system, Including Its Participation in the Hydro-Thermal Power Program." The Acting Director identified three documents which were responsive to NRDC's request, but he declined to release them on the grounds that the documents were exempt from mandatory public disclosure under section 552(b)(5) of the act. In considering the NRDC appeal, the DOE determined that one of the identified documents had already been released to the public, and should therefore be released to NRDC. The DOE determined that the remaining two documents were properly withheld under exemption (b)(5) because they are recommendatory in nature and consist of opinions of governmental officials which are part of the process by which governmental decisions and policies are formulated. The NRDC appeal was therefore granted in part.

Tenneco Oil Co., Houston, Tex., DRA-0156, Motor Gasoline

Tenneco Oil Co. filed an appeal from a Revised Remedial Order which the DOE Office of Special Counsel issued to it on February 15, 1978. In the Revised Remedial Order, the Office of Special Counsel found that as a result of improperly calculating its May 1973 cost and quantity of purchased gasoline, Tenneco had sold motor gasoline at prices which exceeded the firm's maximum allowable selling prices during 6 months of the period from June 1974 through January 1976. In its appeal, Tenneco claimed that it should have been permitted to reallocate to gasoline certain unrecouped product costs attributable to other covered products. In rejecting this contention, the DOE noted that in a previous decision issued to Tenneco it had held that the type of retroactive reallocation of increased costs which the firm proposed has never been permitted by the pricing regulations. *Tenneco Oil Company*, 1 DOE Par. 81,072 (November 15, 1977). Tenneco also contended that the overcharges alleged in the Revised Remedial Order should be modified to permit the recovery of nonproduct costs before product costs. In considering this aspect of the Tenneco appeal, the DOE concluded that the firm had raised its contention in an untimely manner, since it had not argued that it should be permitted to use a reverse sequential recovery method in any prior proceeding before the DOE. The DOE further concluded that a reverse sequential recovery method was clearly prohibited by the pricing regulations. The DOE did conclude, however, that the Office of Special Counsel should consider refraining from enforcing a portion of the Revised Remedial Order pending a final determination by the Temporary Emergency Court of Appeals in *Phillips Petroleum Company, et al. v. Department of Energy*. Accordingly, the Tenneco appeal was denied.

Victory Oil Co., Long Beach, Calif., DRA-0065, Crude Oil

Victory Oil Co. filed an appeal from a Remedial Order which DOE Region IX issued to it on November 15, 1977. In the Remedial Order, Region IX found that during the period September 1, 1973 through August 30, 1975 Victory had sold crude oil at new oil prices despite the fact that the firm had accrued a cumulative deficiency. Region IX also found that Victory had unlawfully received bonuses on sales of crude oil over and above the applicable ceiling prices. In order to remedy these violations, Victory was directed to refund the overcharges to Union Oil Co., the ultimate purchaser of the crude oil, in its appeal, Victory contended that it had not incurred a cumulative deficiency at the property in question. In considering this argument, the DOE noted that during the course of the appeal proceeding the Office of Enforcement had agreed with Victory's position on this issue. That portion of the Remedial Order was therefore rescinded. Victory also argued that its contract with the Independent Oil Producers' Agency (IOPA) established its highest posted price on May 15, 1973. The DOE noted that it had rejected an identical argument in *Berry Holding Company and Independent Oil Producers' Agency*, 1 DOE Par. ——— (June 14, 1978). In that case, the DOE held that premiums collected from Union by IOPA and returned to its members, including Victory, did not constitute part of the posted price. The DOE also rejected Victory's assertion that the premiums paid by Union were for services rendered by IOPA. The DOE further determined that the Remedial Order was not defective for its failure to classify IOPA as either a broker or a reseller, since the classification was irrelevant and Victory was directed to refund only those portions of the premiums which Victory actually received from IOPA. Finally, the DOE concluded that Region IX did not err in assessing interest on Victory's overcharges. The Victory appeal was accordingly denied, except that the Remedial Order was remanded to Region IX for a minor adjustment in the calculation of overcharges.

REQUESTS FOR EXCEPTION

Dorchester Gas Corp. and American Petrofina, Inc., Mount Pleasant, Tex., FEE-4369, Crude Oil and Refined Petroleum Products

On October 17, 1977, the DOE issued a proposed decision and order to Dorchester Gas Corp. and American Petrofina, Inc. (Fina) in which DOE proposed to grant exception relief to facilitate Dorchester's acquisition of a Fina refinery in Mount Pleasant, Tex. As a condition of receiving relief, the DOE proposed to limit the entitlements which Dorchester may earn under 10 CFR 211.67(e) (the small refiner bias) to the benefits which Fina would have earned if it did not sell the facility. Dorchester and Fina objected to that limitation. In considering their contentions, the DOE observed that after the preliminary determination had been issued, the agency's Economic Regulatory Administration (ERA) had indicated it was reassessing the propriety of the small refiner bias. In view of this ongoing reassessment, the DOE determined as a matter of policy that, in the absence of a finding of a clear abuse of the entitlements program, the exception relief approved in refinery acquisition cases would not be conditioned upon the apportionment of the small refiner bias that existed prior to the refinery sale. Accordingly, the DOE issued a decision and order which finalized the proposed determination in all other respects.

Edgington Oil Co., Inc., Los Angeles, Calif., DXE-1047, Crude Oil

Edgington Co., Inc., filed an application for exception from the provisions of 10 CFR 211.67 (the entitlements program) which, if granted, would relieve the firm of its obligation to purchase entitlements for the months of June through November 1978 to account for its crude oil receipts and runs to stills during the months of April through September 1978. In support of its application, Edgington submitted projected financial and operating material for its current fiscal year ending December 31, 1978. Based on the Edgington submission, the DOE determined that Edgington would incur an obligation to purchase entitlements during its current fiscal year which would prevent it from achieving either its historical profit margin or historical return on invested capital (ROIC). The DOE concluded therefore that exception relief was warranted under the criteria set forth in *Delta Refining Co.*, 2 FEA Par. 83, 275 (September 11, 1975) and *Beacon Oil Co.*, 3 FEA Par. 83,209 (June 8, 1976). Since no objection to the proposed determination was filed with the time period specified in the DOE regulations, the decision and order was issued to Edgington in final form on August 16, 1978. The decision notes that subsequent reviews will be conducted of the entitlements exception relief which Edgington was granted and the firm will be required to purchase entitlements if a subsequent determination is made that it received excessive exception relief benefits.

GTE-Sylvania Inc., Hillsboro, N.H. DEE-0530, Propane

GTE-Sylvania, Inc. filed an Application for Exception from the provisions of 10 CFR, Part 211. In its submission, GTE-Sylvania requested an increase in its base period use of propane at its Hillsboro, N.H., incandescent lamp manufacturing plant. The firm contended that its Hillsboro plant required additional supplies of propane beyond its base period levels due to a shutdown of a similar plant located in Kearny, N.J., in June 1975 and the subsequent transfer of those manufacturing operations to the Hillsboro plant. In considering this claim, the DOE found that a mere consolidation of plant operations does not constitute an appropriate ground for granting exception relief to a firm. The DOE found that GTE-Sylvania has not demonstrated that it is experiencing an increased demand for propane, and that the data which the firm submitted with its Application indicates that its consumption of propane is not likely to rise above its base period use. The DOE therefore issued a Proposed Decision and Order in which it was tentatively determined that GTE-Sylvania's Application for Exception should be denied. Since GTE-Sylvania failed to file a Notice of Objection to the proposed determination within the required time period, the DOE issued the Decision and Order denying the firm's Application.

Hanover Management Co., Dallas, Tex. DEE-0496, Crude Oil

Hanover Management Co. filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D which, if granted, would have permitted the firm to sell the crude oil produced from the Dolly Cain No. 1 well in the Coyle Field in Payne County, Okla. at upper tier ceiling prices. In considering the exception request, the DOE found that Hanover's operating costs had increased to the point where the firm no longer had an economic incentive to continue the production of crude oil from the Dolly Cain No. 1 well if the crude oil were subject to the lower tier ceiling price rule. The DOE also determined that if Hanover abandoned its operations at the well, a substantial quantity of domestic crude oil would not be recovered. On the basis of criteria applied in previous Decisions, the DOE determined that Hanover should be permitted to sell at upper tier ceiling prices 13.45 percent of the crude oil produced from the Dolly Cain No. 1 well for the benefit of the working interest.

P & M Petroleum Management, Denver, Colo., DXE-0616, Crude Oil

P & M Petroleum Management filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D which, if granted, would permit P & M to continue to sell a portion of the crude oil produced from the Track Lease in the Tule Creek South Field in Roosevelt County, Mont., at upper tier ceiling prices. In considering the exception request, the DOE found that P & M had continued to incur increased operating costs in connection with the Track Lease and that, in the absence of continued exception relief, P & M would lack an economic incentive to produce crude oil from the property. On the basis of the financial data which P & M had provided for the most recent 6 month period, the DOE granted exception relief which permitted P & M to sell at upper tier prices 34.67 percent of the crude oil produced from the Track Lease for the benefit of the working interest owners.

Western Petroleum Co., Minneapolis, Minn. FEE-4775, No. 1 Heating Oil; No. 2 Heating Oil

Western Petroleum Co. filed an Application for Exception from the provisions of 10 CFR 211.67 in which the firm requested that it be permitted to earn entitlements on the volumes of No. 1 and No. 2 heating oil which it obtains from gulf coast terminals and markets in the upper Midwest. In support of its exception request, Western maintained that it is currently unable to obtain adequate supplies of domestic heating oil to meet its needs and that it is unable to profitably market heating oil obtained from foreign sources. Western contended that the difficulties which it is experiencing are directly attributable to certain benefits which its principal competitors receive through the Entitlements Program. In considering the Western exception request, the DOE concluded that the firm's inability to obtain domestic product is primarily the result of the operation of the free market and not due to the operation of any DOE regulatory program. The DOE also concluded that Western would in all likelihood be unable to market imported heating oil at a profit in the absence of the price controls on domestic crude oil and the Entitlements Program. In view of Western's failure to demonstrate that the particular difficulties which it is experiencing are attributable to any DOE Program, the Western exception request was denied.

PETITIONS FOR SPECIAL REDRESS

George Dietrich, Chicago, Ill., DES-0083, DSG-0022, Propane and Butane

George Dietrich filed a Petition for Special Redress which, if granted, would have resulted in the issuance of an order quashing or modifying a subpena that DOE region V issued to him on May 4, 1978. Dietrich also requested a stay of the subpena pending a final determination on his Petition. In considering the Dietrich Petition, the DOE noted that § 205.8(h)(4), which sets forth the criteria governing review of Petitions of this type, provides that a preliminary review of the Petition will be made in order to determine whether a reasonable probability exists that the petitioner will be able to satisfy the criteria for relief. If the Office of Hearings and Appeals determines that a Petition might satisfy those criteria, the Petition will be considered on the merits. On the other hand, if the determination is made that the Petition fails to meet this threshold standard, the Petition will be dismissed. See 41 FR 55322 (Dec. 20, 1976). The DOE reviewed the contentions which Dietrich advanced in his Petition and concluded that he had failed to demonstrate that an immediate review was warranted to correct substantial errors of law, to prevent substantial injury to legal rights, or to cure a gross abuse of administrative discretion. The Dietrich Petition was therefore dismissed and his Application for Stay was denied.

Joe K. Staley Oil Co., Greenacres, Wash., DSG-0017, DES-0094, Reporting Requirements

Joe K. Staley Oil Co. filed a Petition for Special Redress which, if granted, would have resulted in the rescission of a Special Report Order issued to the firm by DOE region X on November 30, 1978. Staley also requested a stay of the provisions of the Special Order pending a final determination on its Petition. In considering the Staley Petition, the DOE noted that § 210.91(d), which establishes the criteria to be applied in the review of petitions of this type, provides that a petition be considered on its merits only upon a showing that immediate review is warranted to correct substantial legal errors, to prevent substantial injury to legal rights, or to cure a gross abuse of administrative descretion. Upon review of the Staley Petition, the DOE concluded that Staley failed to demonstrate that immediate review is warranted under the terms of § 210.91(d). In its Petition, Staley argued that the issuance of the Special Report Order violated section 13(h) of the Federal Energy Administration Act because it imposed undue hardship on a small marketer. The DOE found that whatever hardship Staley may incure in complying with the Special Report Order resulted from the firm's own failure to comply with DOE recordkeeping requirements. The DOE also rejected Staley's claims that the issuance of the Special Report Order was prohibited by the due process clause of the fifth amendment, the State of Washington's statute of limitations, or Federal law. Accordingly, the Staley Petition was dismissed and its Application for Stay was denied.

LaSalle National Bank, Chicago, Ill., DSG-0025, DES-0092, Third Party Subpena

LaSalle National Bank filed a Petition for Special Redress which, if granted, would result in the issuance of an order quashing or modifying a subpena that DOE region V issued to the bank on May 1, 1978. LaSalle also requested a stay of the provisions of the subpena pending a final determination on its Petition. In its Petition, LaSalle noted that the underlying DOE investigation concerned one of its depositors, not the bank itself, and its contended that the standard of relevance which is applied to subpenas seeking the examination of a third party's records should be stricter than in the ordinary situation. The DOE rejected this argument, noting that LaSalle was not a truly independent third party, since it was banker to and custodian of certain financial records of a partner of a firm being lawfully investigated. Nevertheless, the DOE found that the subpena satisfied the standard of relevance proffered by LaSalle because the necessary nexus exists between its records and the firm under investigation. The banking records of the wife of an individual under investigation were also found to be sufficiently relevant to justify a subpena of her bank records. The DOE concluded that the bank had failed to demonstrate a reasonable probability that exceptional circumstances existed which warranted an immediate review on the merits, and its Petition for Special Redress was therefore dismissed.

REQUEST FOR STAY

A. Johnson & Co., Inc., New York, N.Y., DES-0087, Residual Fuel Oil

A. Johnson & Co., Inc. (Johnson) requested that certain provisions of the Mandatory Petroleum Allocation and Price Regulations be stayed during the pendency of an Application for Exception which the firm had filed. Johnson requested a stay of the provisions of 10 CFR 211.67(d)(4), the "reverse entitlements" provisions of the Old Oil Entitlements Program, which are designed to mitigate potentially severe competitive imbalances in the East Coast residual fuel oil market. The stay request, if granted, would have permitted Johnson to earn additional entitlements on its sale of residual fuel oil. In support of its stay request, Johnson stated that on June 15, 1978 the DOE had proposed to amend § 211.67 to eliminate the reverse entitlements regulation. Under the circumstances, the DOE determined that Johnson's request should be treated as a request for interim exception relief pending the final adoption of the proposed amendments. The DOE determined that stays granting interim exception relief pending the finalization of proposed amendments to the DOE regulations will be approved only if, in addition to fulfilling the usual requirements for a stay, an applicant makes a strong showing that (i) there is a substantial likelihood that the regulatory amendment

V 4

in question will be adopted substantially as proposed, and (ii) the interim exception relief, if granted, would have an effect which is clearly consistent with the proposed amendment. The DOE determined that Johnson had failed to show that the

[3128-01-M]

ISSUANCE OF DECISIONS AND ORDERS

Week of August 21 Through August 25, 1978

signed to protect from public disclosure. Accordingly, the Texaco Appeal was denied.

Texas American Oil Corp., Midland, Tex., DRA-0083, Crude Oil

The Texas American Oil Corp. (TAO)

mitted to sell natural gas liquids and natural gas liquid products produced at the Tyrone gas plant, located in Texas County, Okla., at prices in excess of the maximum levels permitted under the provisions of Subpart K of the DOE regulations. In sup-

lease was subject to automatic termination upon the termination of the fuel supply agreement between Texaco and National.

In considering National's Appeal, the DOE determined that the fuel sale and

in an efficient manner. The DOE therefore concluded that the DOE Regulations were causing Monsanto to experience a gross inequity. In granting exception relief, the DOE permitted Monsanto to reinstate the practice of offering crude oil producers a

V 4 3 / 2 0 3 0 0 0 1 9 7 8

in question will be adopted substantially as proposed, and (ii) the interim exception relief, if granted, would have an effect which is clearly consistent with the proposed amendment. The DOE determined that Johnson had failed to show that the relief, if granted, would have had an effect which was clearly within the scope of intention of the June 15 proposed amendments and had also failed to satisfy the usual requirements for a stay.

MOTION FOR EVIDENTIARY HEARING

No. 2 (Home) Heating Oil, Washington, D.C., DEH-0022, No. 2 Heating Oil

On August 10, 1978, the Office of Hearings and Appeals of the Department of Energy issued a Proposed Decision and Order relating to an evidentiary hearing which that Office intended to hold beginning August 21, 1978. The evidentiary hearing is being held to consider the need for further regulatory action with regard to No. 2 (home) heating oil. In the Proposed Decision, the Office of Hearings and Appeals established a preliminary outline of the issues which it envisioned would be considered during the course of the evidentiary hearing. Following the issuance of the Proposed Decision, the Office of Hearings and Appeals solicited the views of the parties to the proceeding, and after considering their views, issued a Decision and Order setting forth the Statement of Issues to be considered at the evidentiary hearing.

DISMISSALS

The following submissions were dismissed following a statement by the applicant indicating that the relief requested was no longer needed:

Bernbeck Oil Co., Lakis, Kans., DEE-0930

Robert E. Park, Casper, Wyo., DRH-0046

The following submission was dismissed for failure to correct deficiencies in the firm's filing as required by the DOE Procedural Regulations:

Lynnhaven Water Way Marina, Virginia Beach, Va., DEE-1307

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B-120, 2000 M Street NW., Washington, D.C. 20461, Monday through Friday, between the hours of 1 p.m. and 5 p.m., e.d.t., except Federal holidays. They are also available in *Energy Management: Federal Energy Guidelines*, a commercially published looseleaf reporter system.

MELVIN GOLDSTEIN,
Director, Office of Hearings and Appeals.

ISSUANCE OF DECISIONS AND ORDERS

Week of August 21 Through August 25, 1978

Notice is hereby given that during the week of August 21 through August 25, 1978, the Decisions and Orders summarized below were issued with respect to Appeals and Applications for Exception or other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions which were dismissed by the Office of Hearings and Appeals and the basis for the dismissal.

APPEALS

Atlantic Richfield Co., Los Angeles, Calif., FRA-1456, Motor Gasoline

The Atlantic Richfield Co. (Arco) filed an Appeal from a Remedial Order which was issued to the firm by Region IX of the Federal Energy Administration on August 1, 1977. In the Remedial Order, FEA Region IX determined that Arco had improperly classified Arconol (a component of Arco's motor gasoline) as a covered product under the provisions of 10 CFR 212.31. The Regional Office found that Arconol is tertiary butyl alcohol and that tertiary butyl alcohol is not within the regulatory definition of a covered product. According to the Remedial Order, Arco's erroneous classification of Arconol resulted in Arco's improperly reflecting $22,475,575 in the prices it may lawfully charge for motor gasoline. In its Appeal, Arco maintained that the Remedial Order was erroneous as a matter of fact in finding that Arconol is tertiary butyl alcohol. However, Arco also maintained that even if Arconol is tertiary butyl alcohol, Arconol should nevertheless be considered to be a covered product as a matter of law. After considering the evidence presented in the Arco Appeal with respect to the chemical composition, physical characteristics and end uses of Arconol and tertiary butyl alcohol, the DOE concluded that Arconol is in fact a grade of tertiary butyl alcohol. However, the DOE further found that by virtue of Arconol's derivation from crude oil (a covered product), its chemical properties and its use as a blending agent in motor gasoline, another covered product, Arconol is a covered product under the Emergency Petroleum Allocation Act. The DOE therefore granted Arco's Appeal and rescinded the Remedial Order.

National Airlines, Inc., Miami, Fla., FIA-1383, Aviation Fuel

National Airlines, Inc. appealed from an Interpretation which the Acting General Counsel of the Federal Energy Administration issued to it on May 28, 1977. In that Interpretation, the Acting General Counsel held that Part 212 of the Mandatory Petroleum Price Regulations did not prohibit Texaco, Inc. (Texaco) from raising its rental fees for fuel trucks leased to National. Under the facts presented in the Interpretation, Texaco supplied aviation fuel to National at the Norfolk Municipal Airport (Norfolk). In addition, Texaco leased its fuel trucks to National for the express purpose of transferring the aviation fuel from storage into National's planes. The fuel truck lease was subject to automatic termination upon the termination of the fuel supply agreement between Texaco and National.

In considering National's Appeal, the DOE determined that the fuel sale and truck lease arrangements between Texaco and National did not constitute a prohibited "tie-in" arrangement since Texaco did not require National to lease fuel trucks as a condition of being supplied with product at Norfolk. The DOE further determined that the truck leasing arrangements between the two firms did not fall within the penumbral area of non-selling activities which may be regulated by the DOE in order to prevent the circumvention of the agency's price regulations. In this regard, the DOE found that since National continued to have practical alternative means of securing into-plane services at Norfolk, Texaco was unable to exercise leverage over National in an effort to circumvent the price regulations. In addition, the DOE noted that the fact that Texaco may have offered truck leasing terms to National which were economically superior to any other option available to National did not necessarily indicate that the fuel truck lease was a part of the fuel sales agreement between the firms. The DOE also noted that the truck lease and fuel sales agreements were unambiguous and there was no evidence from these written instruments that the delivery of aviation fuel was an integral part of the sales agreement. Accordingly, the National Appeal was denied.

Texaco, Inc., Washington, D.C., DFA-0200, Freedom of Information

Texaco, Inc. appealed from a partial denial by the DOE Information Access Officer of a request for information submitted by the firm under the Freedom of Information Act (the Act). In its initial request, Texaco sought copies of documents pertaining to DOE's clarifications and revisions of the "property" definition contained in 10 CFR 212.72 of the DOE price regulations. The DOE Information Access Officer withheld portions of five documents on the ground that they contained confidential proprietary information which was exempt from disclosure under Exemption 4 of the Act, 5 U.S.C. 552(b)(4). The DOE Information Access Officer also withheld 28 documents from disclosure on the ground that they were intra-agency memoranda which were exempt from disclosure under Exemption 5 of the Act, 5 U.S.C. 552(b)(5). In its Appeal, Texaco sought the release of only one document which had been withheld under the provisions of Exemption 4. With respect to this document, the DOE found that the Information Access Officer had never determined that the withheld portions of the document were exempt from disclosure. The DOE therefore remanded the portion of the Information Access Officer's Order which related to that document with instructions to make a determination as to its releasability. The DOE also found that all of the documents which were withheld under Exemption 5 contained the opinions and recommendations of DOE personnel, primarily attorneys, regarding the propriety of undertaking a proposed agency action, *e.g.*, the issuance to a firm of a notice of probable violation of the pricing regulations. As a result of this finding, the DOE determined that the documents were predecisional in nature and contained the type of information which Exemption 5 was designed to protect from public disclosure. Accordingly, the Texaco Appeal was denied.

Texas American Oil Corp., Midland, Tex., DRA-0083, Crude Oil

The Texas American Oil Corp. (TAO) filed an Appeal from a Remedial Order which the Acting Director of Enforcement of DOE Region VI issued to the firm on November 14, 1977. In the Remedial Order, the DOE Regional Office found that TAO had improperly treated two well groupings on its Todd Federal 26 Lease as if they were two separate "properties," and had, in turn, incorrectly classified crude petroleum produced from the lease as "new" or "released" crude oil. According to the Remedial Order, the crude oil that TAO had misclassified was sold at prices which were in excess of those permitted by the Mandatory Petroleum Price Regulations. In considering the TAO Appeal, the DOE determined that neither the fact that TAO had historically and consistently treated the two well groupings on the Todd Federal 26 Lease as two separate "properties," nor the fact that it had done so in order to account for production from the two well groupings to different working interest owners, demonstrated that the lease consisted of more than one "property" as that term was defined in the applicable crude oil price regulations. The DOE also found that contrary to an argument advanced by TAO, it was not arbitrary or capricious for the Remedial Order to have found that TAO's circumstances did not qualify the two well groupings for separate property treatment under the provisions of Rulings 1977-1 and 1977-2. The DOE therefore concluded that the November 14, 1977 Remedial Order was neither erroneous in fact or law nor arbitrary and capricious. Accordingly, the TAO Appeal was denied.

REQUESTS FOR EXCEPTION

Goose Creek Oil Co., Marion County, Ill., DEE-0318, Crude Oil

The Goose Creek Oil Co. filed an Application for Exception from the provisions of 10 CFR, Part 212, Subpart D. In its application, Goose Creek stated that it had attempted to comply with the certification requirements of 10 CFR 212.131 by mailing a lease certification to the purchaser of the firm's crude oil, indicating that Goose Creek's Robinson No. 4 lease had produced "new" crude oil during the month of June, 1977. However, the purchaser later informed Goose Creek that it never received the certification. Since the deadline for filing the certification had passed, Goose Creek requested an exception in order to permit the firm to receive the difference between "new" and "old" oil prices for the crude oil which the firm produced and sold during the month of June, 1977. In considering the exception application, the DOE determined that Goose Creek had made a convincing showing that it had acted promptly and reasonably to comply with the certification requirements of Section 212.131, and that the strict application of the certification provisions in this case would result in a gross inequity to the firm. Accordingly, the exception application was granted.

MAPCO, Inc., Tulsa, Okla., DEE-0532, Natural Gas Liquids

MAPCO, Inc. filed an Application for Exception in which it requested that it be permitted to sell natural gas liquids and natural gas liquid products produced at the Tyrone gas plant, located in Texas County, Okla., at prices in excess of the maximum levels permitted under the provisions of Subpart K of the DOE regulations. In support of its Application, MAPCO stated that it wished to invest a substantial sum of money in a replacement unit at the Tyrone plant. The material submitted by MAPCO indicated that the installation of this unit would significantly increase the operating efficiency of the plant, reduce operating expenses, and eliminate a safety hazard which exists at the plant. In considering the MAPCO exception request, the DOE observed that it has previously granted exception relief in a number of cases where that relief was necessary to provide a firm with an economic incentive to undertake a capital investment. Since the material submitted by MAPCO demonstrated that it would have no economic incentive to undertake the investment in the absence of exception relief, the DOE concluded that an exception should be granted to the firm. In accordance with the precedent established in previous cases involving capital investments, the DOE approved a level of exception relief which would permit MAPCO to realize a 15 percent rate of return on its investment. However, the DOE determined that the cost of the investment should be distributed among all of the products produced at the Tyrone plant. The DOE therefore required MAPCO to file a Petition for Special Relief with the Federal Energy Regulatory Commission (FERC) requesting higher prices for the natural gas produced from the Tyrone gas plant. The DOE also stated that the relief granted to MAPCO would be adjusted if FERC permits MAPCO to increase its prices for natural gas.

Monsanto Co., St. Louis, Mo., FEE-4397, Crude Oil; Unfinished Oils

The Monsanto Co. filed an Application for Exception from the provisions of 10 CFR 211.67 (the Old Oil Entitlements Program). Monsanto operates a petrochemical manufacturing complex located in Chocolate Bayou, Tex., which was originally designed to use lease condensate as a feedstock. In its Application, Monsanto observed that it has been unable to obtain sufficient supplies of lease condensate for use in the Chocolate Bayou facility and that as a result, it has been required to use unfinished oils as a substitute. According to Monsanto, the petrochemical plant cannot be operated at full capacity nor can it produce the range of products which it was originally designed to produce unless it uses lease condensate. Monsanto claims that its inability to obtain lease condensate is a gross inequity which is attributable to the DOE regulations. In considering the Monsanto exception request, the DOE observed that, prior to the promulgation of crude oil price controls, Monsanto offered a premium above posted prices in order to provide producers with an economic incentive to segregate lease condensate from other crude oil and natural gas supplies and to sell that condensate to Monsanto. However, the DOE noted that under the price regulations Monsanto is currently unable to offer such a premium to a producer which is already receiving ceiling prices, and the DOE found that this situation has to some extent prevented Monsanto from obtaining lease condensate which is necessary to operate the Chocolate Bayou facility in an efficient manner. The DOE therefore concluded that the DOE Regulations were causing Monsanto to experience a gross inequity. In granting exception relief, the DOE permitted Monsanto to reinstate the practice of offering crude oil producers a premium above the applicable ceiling prices.

R. W. Tyson Producing Co., Inc., Jackson Miss., FEE-4440, Crude Oil

The R. W. Tyson Producing Co., Inc. filed an Application for Exception in which it requested that it be permitted to sell at market price levels the crude oil produced as a result of four investments it has proposed for the three Stevens leases, located in Perry County, Miss. In considering the Tyson request, the DOE observed that the data furnished by the firm indicated that it would have no economic incentive to undertake the investments in the absence of exception relief from the ceiling price regulations. The DOE also noted that the approval of exception relief would result in the production of a substantial amount of crude oil which would otherwise not be produced. In accordance with the precedent established in a number of previous Decisions, the DOE determined that exception relief should be approved which would permit Tyson to realize a 15 percent rate of return on its investments. However, the data submitted by Tyson indicated that this result would not be achieved even if the firm sold all of the crude oil produced as a result of its investment at market price levels. The DOE therefore permitted Tyson to sell all of that crude oil at exempt prices for a period of twenty years in order to remove any impediment which the crude oil price regulations might otherwise impose to the attainment of a 15 percent rate of return on Tyson's proposed investment.

PETITIONS FOR SPECIAL REDRESS

Fine Petroluem Co., Inc., Norfork, Va., DES-0076, DSG-0021, Petroleum Products

Fine Petroleum Company, Inc. filed a Petition for Special Redress which, if granted, would have resulted in the issuance of an order quashing a subpena that DOE Region III issued to the firm on March 6, 1978. Fine also requested a stay of the provisions of the subpena pending a final determination on its Petition. In considering the Fine Petition, the DOE noted that § 205.8(h)(4) of the DOE Regulations sets forth criteria governing the review by the Office of Hearings and Appeals of a Petition in which a firm seeks to quash or modify a subpena. That section provides that a preliminary review will be made in order to determine whether a reasonable probability exists that the petitioner will be able to satisfy the criteria for relief. If the Office of Hearings and Appeals determines that a Petition might satisfy those criteria, the Petition will be considered on its merits. On the other hand, if the determination is made that the Petition fails to meet this threshold standard, the Petition will be dismissed. See 41 FR 5532 (December 20, 1976). The DOE reviewed the contentions which Fine advanced in its Petition and concluded that Fine had failed to demonstrate that an immediate review was warranted to correct substantial errors of law, to prevent substantial injury to legal rights, or to cure a gross abuse of administrative discretion. Fine's Petition was therefore dismissed and its Application for Stay was denied.

Office of Special Counsel for Compliance, Department of Energy, Washington, D.C., DSG-0028, Crude Oil

The Office of the Special Counsel for Compliance (OSC) of the Department of Energy filed a Petition for Special Redress

Western had failed to demonstrate that an immediate review was warranted to correct substantial errors of law, to prevent substantial injury to legal rights, or to cure a gross abuse of administrative discretion. Western's Petition was therefore dis-

ment purchase obligations of Lakton should be stayed to the extend specified in the Proposed Decision, pending the issuance of a final Decision and Order in this proceeding.

V 4 3 1 2 0 3 OCT 19 78

Office of Special Counsel for Compliance, Department of Energy, Washington, D.C., DSG-0028, Crude Oil

The Office of the Special Counsel for Compliance (OSC) of the Department of Energy filed a Petition for Special Redress. The Petition pertains to a Proposed Consent Order that the OSC entered into with the Gulf Oil Corp. on July 26, 1978. Under the terms of the Proposed Consent Order, Gulf is required to remit $42,240,000 to the United States to settle a compliance proceeding instituted against it by the DOE regarding Gulf's calculation of costs incurred in crude oil transactions with affiliated entities during the period August 1973 through January 1976. In its Petition, the OSC requested the Office of Hearings and Appeals (OHA) to establish an ad hoc administrative procedure for adjudicating claims by Gulf customers for a portion of the refund. The OHA found, upon considering the OSC request, that sufficient authority existed for the establishment of the type of procedure requested. The OHA further found that such a procedure was necessary and appropriate in this case to the accomplishment of certain of the objectives contained in the Emergency Petroleum Allocation Act of 1973, the Federal Energy Administration Act of 1974 and the Department of Energy Organization Act. Accordingly, a claims procedure was adopted on an interim basis.

Under the provisions of the procedures which were established, claims for refunds will be evaluated by the OHA or, in the case of routine claims, by an administrator appointed and supervised by the OHA. To establish a claim, a person must persuasively demonstrate that he was injured as a result of the alleged pricing practices upon which the Consent Order was based and he must describe, with a reasonable degree of certainty, the nature and extent of the injury. The following presumptions were also adopted to facilitate the resolution of claims: (i) The entire amount remitted by Gulf represents costs that it applied evenly on a volumetric basis to all refined petroleum products which it produced during the August 1973 through January 1976 period, and those costs were proportionately reflected in the prices that Gulf charged for those products during that period; (ii) if Gulf had determined its prices in accordance with applicable regulations, resellers during this period would have passed through to their own customers 60 percent of the benefits of any price reduction that occurred; and (iii) all Gulf products passed through two levels of distribution before being purchased by a consumer.

Western Crude Oil, Inc., Denver, Colo., DSG-0023, DES-0084, Petroleum Products

Western Crude Oil, Inc. filed a Petition for Special Redress which, if granted, would have resulted in the issuance of an order quashing or modifying two subpenas that DOE Region VIII issued to the firm on February 28 and March 8, 1978. Western also requested a stay of the provisions of the subpenas pending a final determination on its Petition. In considering the Western Petition, the DOE noted that §205.8(h)(4) of the DOE Regulations sets forth criteria governing the review by the Office of Hearings and Appeals of a Petition in which a firm seeks to quash or modify a subpena. In accordance with those criteria, the DOE reviewed the contentions which Western advanced in its Petition and concluded that Western had failed to demonstrate that an immediate review was warranted to correct substantial errors of law, to prevent substantial injury to legal rights, or to cure a gross abuse of administrative discretion. Western's Petition was therefore dismissed and its Application for Stay was denied.

REQUEST FOR STAY

Mid-America Refining Co., Inc., Washington, D.C., DES-0097, Crude Oil.

Mid-America filed an Application for Stay in which the firm requested that the DOE reconsider a Decision and Order which it issued on August 7, 1978 denying a prior Application for Safety which Mid-Admerica had filed. In both Applications, Mid-America requested that the DOE stay the firm's obligation to purchase $241,282 in entitlements for its crude oil receipts and runs to stills during the month of May, 1978. As an initial matter, the DOE found that since no new issues had been raised by Mid-America in its request for reconsideration, the DOE could issue a summary denial on the basis of the August 7 Decision and Order. However, the DOE exercised its discretion and afforded the firm a *de novo* review of the previous stay application.

In considering Mid-America's request, the DOE found that the firm's entitlement purchase obligation for the month of May was the result of certain paper exchange transactions through which volumes of crude oil which the firm had previously certified as stripper well crude oil were certified as "old" crude oil. The DOE also found that on the basis of the data submitted by Mid-America in connection with the previous stay request, it appeared that the economic benefit to it of purchasing less expensive "old" crude oil had exceeded the entitlement purchase obligations which that "old" crude oil had generated. Under these circumstances, the DOE concluded that the Entitlements Program is not causing the firm to experience an irreparable injury which warrants the approval of stay relief. Moreover, the DOE concluded that since the firm had entered into the exchange agreement voluntarily, the firm could hardly complain that the responsibility for any consequent financial injury lay with the Entitlements Program. On the basis of these considerations, Mid-America's Application for Stay was denied.

SUPPLEMENTAL ORDER

Laketon Asphalt Refining, Inc., Evansville, Ind., DEX-0103, Crude Oil

On August 21, 1978, the DOE issued a Decision and Order to Laketon Asphalt Refining, Inc. which stayed the firm's obligation to purchase entitlements to the extent specified in a Proposed Decision and Order which was issued to Laketon on that same date. In granting the Stay, the DOE stated that as a result of new exceptions procedures which had been adopted effective September 14, 1977, the Proposed Decision and Order would not be finalized for at least 10 days after service of the Proposed Decision and Order. During the period between the issuance of the Order in proposed form and the issuance of the Order in final form, Entitlements Notices would be issued which would not take into consideration the relief proposed for Laketon. Therefore, the DOE determined that during the period August 1, 1978 through January 31, 1979, the entitlement purchase obligations of Laketon should be stayed to the extend specified in the Proposed Decision, pending the issuance of a final Decision and Order in this proceeding.

DISMISSALS

The following submission was dismissed following a statement by the applicant indicating that the relief requested was no longer needed:

Herrington L.P. Gas Co., Olive Branch, Miss., DRH-0013, DRO-0013.

Copies of the full text of these Decisions and Orders are available in the Public Docket Room of the Office of Hearings and Appeals, Room B-120, 2000 M Street NW., Washington, D.C. 20461. Monday through Friday, between the hours of 1 p.m. and 5 p.m., e.d.t., except Federal holidays. They are also available in *Energy Management: Federal Energy Guidelines*, a commercially published loose leaf reporter system.

MELVIN GOLDSTEIN,
Director,
Office of Hearings and Appeals.

ENVIRONMENTAL PROTECTION AGENCY

[FRL 930-4; OPP-00078]

STATE FIFRA ISSUES RESEARCH AND EVALUATION GROUP (SFIREG)

Working Committees on Enforcement; Registration and Classification; Certification; and Training; Open Meeting

AGENCY: Environmental Protection Agency (EPA), Office of Pesticide Programs.

ACTION: Notice of open meetings.

SUMMARY: The first meeting of the working committees of the State FIFRA Issues Research and Evaluation Group on Enforcement, Registration and Classification, Certification, and Training will be held. This notice gives information on the date, location, agenda, and contact person for each meeting.

DATES: Refer to respective Working Committees shown below.

SUPPLEMENTARY INFORMATION:

1. *Working Committee on Enforcement (WC/E).*

The Working Committee on Enforcement will meet on Monday and Tuesday, October 30 and 31, 1978, at the Bourbon Orleans Ramada, New Orleans, La., telephone: 504-523-5252. The meeting will begin each day at 8:30 a.m. The meeting will be concerned with the following topics:

a. The 1978 amendments to Sections 27 and 28 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended;

b. State-EPA cooperative enforcement grant criteria;

c. Requirements of States under cooperative enforcement agreements;

d. State-Federal enforcement referral procedures; and

e. Other enforcement matters which may arise.

This meeting will be open to the public. For further information, contact Mr. William Buffaloe, North Carolina Department of Agriculture, Raleigh, N.C., telephone: 919-733-3556.

2. *Working Committee on Registration and Classification (WR/RC).*

The Working Committee on Registration and Classification will meet on Wednesday and Thursday, November 8 and 9, 1978, at the Downtowner Inn, New Orleans, La., telephone: 504-524-7611. The meeting will begin each day at 8:30 a.m. The meeting will be concerned with the following topics:

a. 1978 FIFRA amendments affecting registration and classification;

b. Development of new Section 24(c) special local need criteria;

c. Section 5(f) and (g) draft final regulations governing State experimental use permits;

d. Classification regulations governing lists of restricted use compounds;

e. EPA planning for conditional registration; and

f. Other items suggested by the WC/RC.

This meeting will be open to the public. For further information, contact Mr. George Hutton, Office of the State Chemist, Purdue University, West Lafayette, Ind., telephone: 317-749-2391.

3. *Working Committee on Certification (WC/C) and Working Committee on Training (WC/T). The Working Committee on Certification and the Working Committee on Training will hold a joint meeting on Tuesday and Wednesday, November 14 and 15, 1978, at the Downtowner Inn, New Orleans, La., telephone: 504-524-7611. The meeting will begin each day at 8:30 a.m. The meeting will be concerned with the following topics:*

a. Pesticide applicator training options;

b. Recordkeeping by State lead agencies for certification;

c. Recertification requirements;

d. EPA guidance on recertification;

e. EPA guidance on Federal funding of State training and certification programs. Included in this subject are a review of the results of the State Lead Agency questionnaire on funding of certification programs and a review of the recent study of the Council of State Governments on funding of State certification and training programs;

f. 1978 FIFRA amendments affecting certification and training; and

g. Other certification and training matters which may arise.

This meeting will be open to the public. For further information, contact Mr. Ron Johnson, Maryland Department of Agriculture, Annapolis, Md., telephone: 301-269-2325, or Ms. Lois French, EPA Office of Pesticide Programs, Washington, D.C., telephone: 202-755-0356.

Dated: October 13, 1978.

JAMES M. CONLON,
Associate Deputy Assistant Administrator for Pesticide Programs.

FEDERAL COMMUNICATIONS COMMISSION

IMPROVING GOVERNMENT REGULATIONS

Report to the President

AGENCY: Federal Communications Commission.

ACTION: Letter to President Carter concerning Executive Order 12044 (improving government regulations).

SUMMARY: The following letter was sent by Chairman Charles D. Ferris of the Federal Communications Commission to the President in response to Executive Order 12044 (improving Government regulations). The letter outlines the steps taken at the FCC to improve its regulatory proceses and opportunities for public participation in its proceedings. Chairman Ferris expects to continue efforts to improve the FCC's regulatory processes. Public comments are welcome on the procedures outlined in the following letter.

FOR FURTHER INFORMATION CONTACT:

Erika Ziebarth Jones, FCC Consumer Assistance Office, 1919 M Street NW., Washington, D.C. 20554, 202-632-7000.

ADDRESS: Send comments to: Secretary, FCC, 1919 M Street NW., Washington, D.C. 20554.

WILLIAM J. TRICARICO,
Secretary.

[Editorial note: The following is a copy of the letter discussed in the "Summary" above.]

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D.C.

The PRESIDENT,
Washington, D.C.

DEAR MR. PRESIDENT: I welcome the opportunity to respond to your letter requesting that the Federal Communications Commission and other independent regulatory agencies voluntarily implement procedural and substantive reforms in our informal rulemaking processes. Executive branch agencies and departments are required to implement such reforms by Executive Order 12044 (improving Government regulations). The goals of this order are to:

Open up new opportunities for public participation in the regulatory process, require regulations to be clearer and more understandable, and assure more effective oversight of the development of agency regulations.

This Commission does support those goals and is committed to a continuing and critical review of our rulemaking procedures. I have personally stated that I favor a policy of zero-based regulation. We should take a fundamental look at the reasons behind the rules we have. I believe in stimulating the marketplace forces of competition instead of adding rules to achieve policy goals where that is possible. Any examination of our rulemaking procedures must be accomplished in the broader context of an examination of our total regulatory structure.

I believe the Commission can be proud of its efforts to date which demonstrate its commitment to the principles of better regulatory management and greater public participation. I also believe, however, that we should continue to examine our rulemaking functions under the broad goals articulated by your Executive order.

To that end, our staff has made a thorough examination of the FCC's informal rulemaking functions from the perspectives of the three principal areas of the Executive order: regulatory management, regulatory language, and public participation. This has led us, as we state at greater length below, to adopt several new approaches to our rulemaking activities. In summary, we will:

—increase our efforts to encourage public participation in our rulemakings;

—create a semiannual agenda for our significant rulemaking proceedings;

—have periodic meetings of our senior staff to discuss and coordinate upcoming significant rulemakings;

—where possible, make certain that regulatory analysis precedes proposed rulemaking that could have major economic effects; and

—under the guidance of Commissioner Tyrone Brown, establish an agencywide task force to examine every FCC rule and paperwork requirement to see if our rules and re-

V 4 3 / 2 0 3

quirements are meeting their stated purpose.

REGULATORY MANAGEMENT

The Executive order calls on Executive branch agencies to "review and revise their procedures for developing regulations to be consistent with the policies of this order".

Some of the specific suggestions pertaining to regulatory management listed in the Executive order are:

1. SEMIANNUAL AGENDA OF REGULATIONS

The Executive order requires executive branch agencies to publish "at least semiannually an agenda of significant regulations under development or review". The purpose of the semiannual agenda is (1) to give the public "early warning" of impending regulatory actions and (2) to assist agencies in planning their regulatory programs efficiently. We also prepare an annual report of "Major Matters Before the Commission"; and we have started a management reporting system to determine internally the status of all pending rulemaking petitions.

I have decided to create a public semiannual agenda for significant informal rulemaking matters, in addition to continuing to prepare and publish our annual "Major Matters" report. Preparation of a semiannual agenda will, I agree, result in more rational regulatory planning and allow greater public involvement in agency rulemaking proceedings. I have asked our Office of Executive Director, Office of Plans and Policy, and Office of General Counsel to be jointly responsible for preparation of our agenda.

2. AGENCY HEAD OVERSIGHT

The Executive order states that:

> Before an agency proceeds to develop significant new regulations, the agency head shall have reviewed the issues to be considered, the alternative approaches to be explored, a tentative plan for obtaining public comment, and target dates for completion of steps in the development of the regulation.

The structure of the FCC (and, indeed, most independent regulatory agencies) is such that the "agency head," that is, the full Commission, always votes to launch inquiries or issue proposals before the staff "proceeds to develop * * * [the final] new regulations." The inquiry notice or proposal, which is a public document, includes a discussion of the issues to be considered and a discussion of the mechanisms for obtaining public comment, and, in the case of the proposal, the text of the proposed change.

Even prior to the consideration by the Commission of inquiry notices or proposals, almost all significant rulemakings that are being worked on by the staff are known to the Commissioners. Frequently, the area is being investigated for rulemaking because of specific expressions of concern by the Commission.

I believe, however, that better coordination may be necessary between Bureaus and Offices of the Commission concerning work in progress within separate divisions of the agency. We are presently using a procedure by which senior staff members representing the various organizational units in the Commission meet periodically in a Bureau Chiefs' meeting with me to discuss, among other subjects, areas of significant rulemaking that are at the seminal stage. I may ask the staff considering a specific area for study to prepare for the group a brief memorandum covering a statement of the problem, possible alternative approaches, a tentative schedule for completion, and a name and telephone number of a person familiar with the project. Because this document would be preliminary in nature, it is not contemplated that it would be released to the public at this early stage. Other FCC units would use this document to enable them to express in a more systemative manner any views or interest they might have.

In addition to overseeing preparation of the semiannual agenda, our Office of General Counsel will be the principal coordinating point for all rulemaking actions among the various FCC Bureaus and Offices. Our Office of Plans and Policy is also charged with reviewing all work in progress at the Commission to determine its impact on long-range Commission policy.

The Executive order suggests that, when the Commission approves the issuance of an inquiry notice or proposal, it also consider "alternative approaches to be explored." The FCC's Safety and Special Radio Services Bureau has begun to prepare its significant presentations ("Agenda Items") for the Commission in a format which offers the alternative solutions to the problem, including discussions of the advantages and disadvantages of each. The Commissioners, then, with the benefit of the staff's discussion of the alternatives, can direct the staff to proceed in a particular direction.

I intend to encourage other Bureaus and Offices to explore the benefits of including additional discussions of alternative solutions to rulemaking proposals, where this is appropriate.

3. APPROVAL OF SIGNIFICANT REGULATIONS

In addition to the procedures for managing the process through which rules are proposed, the Executive order requires certain affirmative determinations to be made by executive branch agencies before adoption of a new rule.

Specifically, the order requires a review to determine that:

(1) the proposed regulation is needed;

(2) the direct and indirect effects of the regulation have been adequately considered;

(3) alternative approaches have been considered and the least burdensome of the acceptable alternatives has been chosen;

(4) public comments have been considered and an adequate response has been prepared;

(5) the regulation is written in plain English and is understandable to those who must comply with it;

(6) an estimate has been made of the new reporting burdens or recordkeeping requirements necessary for compliance with the regulation;

(7) the name, address, and telephone number of a knowledgeable agency official is included in the publication; and

(8) a plan for evaluating the regulation after its issuance has been developed.

In large measure, the steps the Executive order recommends for approval of significant regulations are already required by FCC procedures or are part of any competently prepared rulemaking document. I recognize, however, that the Executive order requires a more systematic attempt to insure that each of the eight factors listed above is considered before any significant rule is adopted. I have asked the staff to use the eight factors above as an internal FCC checklist to assist both drafters and reviewers in a significant rulemaking. I believe, for example, that, in some cases, it may be useful to announce plans at the time of adoption of some significant rules to evaluate their effects after issuance. I have also directed that each item proposing or announcing a new reporting or recordkeeping burden specifically mention the new burden and discuss it for the Commission's review.

I also believe that the "name, address, and telephone number of a knowledgeable agency official" should be a part of each regulatory publication. I have directed the staff to begin including this information in the text of the inquiry, proposal, and final rule. Also, we will include this information in *Actions Alert*, the FCC's weekly summary of major pending rulemaking proposals, and in *Feedback*, FCC publication that gives an in-depth, plain language explanation of certain significant rulemaking proposals.

4. REGULATORY ANALYSIS

The Executive order proposes that a regulatory analysis of the economic consequences of rulemakings would be made available at the time rules are being proposed for public comment. The order also contemplates that the analysis would be open to public comment. The criteria for determining when regulatory analysis would be necessary are: (1) when the annual cost of compliance if $100 million or more, or (2) when the regulation will result in a "major increase in costs or prices for individual industries, levels of government or geographic regions."

These criteria reflect a legitimate concern that regulatory analysis precede proposed rulemaking that could have major economic effects. We do make preliminary estimates of the economic effects of various proposals as part of our rulemaking process. Indeed, we are required to do so to meet the public interest standard under which we adopt regulations.

We have started an effort to upgrade the status of economic analysis performed at the Commision and to increase the number of economists at the FCC, particularly in our Office of Plans and Policy. With the general guidance of this Office, the various FCC Bureaus and Offices are also improving their ability to perform economic analyses. Indeed, the new chief of the Common Carrier Bureau at the FCC is an economist.

5. REVIEW OF EXISTING REGULATIONS

The FCC is continually reviewing its regulations and procedures informally, as the Commission, the staff, or the public suggests changes which should be made. The Commission's Broadcast Bureau now has a full-time staff reexamining broadcast rules applicable to radio stations with a view towards eliminating or clarifying those regulations. The Safety and Special Radio Services Bureau has completed such a review of its CB regulations, and the Cable Bureau is nearing completion of a similar effort on its certification rules. Our Common Carrier Bureau recently announced an improved license application processing procedure, which will foster more efficient application processing and recordkeeping.

As resources permit, we will undertake reviews of the remainder of the Commission's rules and procedures on a systematic basis. In the coming months, we will be examining several areas of regulations to see if the rules are meeting their stated purposes. Included in this review will be the radio opertor licensing program and our radio/TV commercial logging rules. This review will be coordinated by an agencywide task force which will examine every FCC rule and every FCC paperwork requirement on a Bureau-by-Bureau basis. This task force will recommend changes where appropriate, and will also make regular reports to the Commission of the team's progress.

To coordinate these and other efforts, I have appointed Commissioner Tyrone Brown to head the Commission's regulations review process.

PUBLIC PARTICIPATION

The Executive order requires that "Agencies shall give the public an early and meaningful opportunity to participate in the development of agency regulations."

The Commission takes a variety of approaches beyond the minimum requirements of the Administrative Procedure Act to invite and encourage public participation in rulemaking. In addition to those procedures, we also have tried to keep the public informed of the significant rulemakings that are in progress. We publish a weekly summary of our pending significant rulemakings, *Actions Alert*, which is sent to a large number of individuals, organizations, and publications likely to be interested in, or affected by, Commission actions. *Actions Alert* is directed to, and written for, a much broader public than would readily have access to the FEDERAL REGISTER. On particularly important items, the Commission publishes special *Feedback* editions, which explain in plain language the details of the rulemaking items. The *Feedback* editions are particularly designed to invite public comment.

We have increased our use of Notices of Inquiry (which other agencies call Advance NPRM's) in selected matters to provide additional time for public participaton prior to issuance of a Notice of Proposed Rulemaking. The Inquiry focuses public attention on the subject and allows the presentation of information or comments at an early stage of the Commision's concern with the subject of the Inquiry.

As I mentioned previously, I have directed the staff to include in *Actions Alert*, *Feedback*, Notices of Inquiry, Notices of Proposed Rulemaking, and final rules the name, address, and telephone number of a staff person who can provide detailed information on the subject matter.

One of the Commission's primary concerns in greater public participation in rulemakings is that the participation be of greatest help to the Commission. In line with this concern, the Commission recently opened an inquiry to explore the possibility of providing reimbursement for representatives of affected segments of the public who wish to participate in FCC rulemaking proceedings, could provide us with needed viewpoints and data different from that of the affected industry economic interests, and who, without reimbursement of their costs of bringing their experiences and data to our attention, could otherwise not be of greatest assistance to us.

Informal questionnaires or polls might elicit information from the concerned public that would provide us with information useful in evaluating the need for regulation or the direction it should take. From simple questions in letters directed to members of the public, such as Citizens Band licensees, cable television operators, or members of the academic community, we might secure information that is specifically needed by the staff in its preparation for rulemaking.

We are also experimenting with a number of techniques to improve the opportunities for public participation in FCC rulemakings. Two years ago, we established a Consumer Assistance Office which is charged, among other things, with helping the Commission attract meaningful public participation in its rulemakings. This office prepares *Feedback*, discussed previously, which gives plain language discussions of significant pending rulemakings. This office recently installed a teletypewriter (TTY) for communicating with the deaf and hard-of-hearing. The TTY can receive comments in FCC rulemakings at any time—24 hours each day. The Consumer Assistance Office is exploring other methods of improving our services to handicapped persons, with the intention of increasing their participation in FCC rulemakings.

To aid individuals who wish to participate in FCC rulemakings, we accept, as informal comments, responses filed with a single copy. We have reduced to a minimum (six) the number of copies to be filed as formal comments in rulemaking proceedings.

When the staff has needed more information prior to considering rulemaking, or when the Commission has wanted to insure broader participation, we have employed a number of ad hoc solutions. We have held oral arguments on many issues, encouraging representatives of the affected economic interests and various segments of the general public to participate. In the areas of children's television, UHF television improvement, and the matter of charitable contributions and institutional advertising by common carriers, we have hosted (or are planning to host) panel discussions. We make an effort to insure that a wide range of views is represented on each panel.

On an issue requiring special attention, we may establish a task force to focus Commission efforts in that area. Two examples of this approach are the Task Force on Adjudicatory Reregulation and the Task Force on Minority Ownership.

V 43 / 203 OCT 1978
